BOMBAY, CALCUTTA & LONDON.

VIEWS of BOMBAY

OLD and NEW

A Photographic record for more than 75 years

An excellent souvenir of the first city of the Indian Empire. 42 beautifully reproduced photographs; not only of modern Bombay, as vie know it, but the Bombay of Yesterday—Views which have vanished forever.

Price Rs. 1-8. V.P.P. Rs. 1-13.

On sale at "The Times of India," Bombay, and all leading book-sellers.

The contents include pictures of Apollo Gate in 1862, Churchgate in 1863, the Esplanade and Harbour during 1865 and the Town, Hall, before the days of Elphinstone Circle.

THE TIMES OF INDIA PRESS Hornby Road, BOMBAY.

"the Times of India Press?"

"Will you send a representative round, please? I'd like to talk about a printing job I've in mind. I saw some of your work the other day and was very impressed with the excellent standard of quality. And a friend told me that you'd plan the whole thing from beginning to end.....you're quick on the job, too, I believe. Yes, sometime this afternoon will be all right."

THE TIMES OF INDIA PRESS BOMBAY.

THE INDIAN YEAR BOOK 1936-37

PREFACE

مته حصمته

THE Editors have to thank many correspondents who during the past year have sent them suggestions for the improvement of this book. The Indian Year Book is intended above all to be a book of reference, and its completeness and convenience of arrangement must necessarily depend to a great extent on the part taken in its editing by the members of the public who most use it.

The help extended to the Editors by various officials, and more particularly by the Director of Information and Labour Intelligence, Bombay, and the Indian Commercial Intelligence Department, has again been readily given and is most gratefully acknowledged. Without such help it would be impossible to produce the Year Book with up-to-date statistics.

Suggestions for the improvement or correction of the Year Book may be sent to the Editors at any time, but those which reach them before January have a better chance of being adopted than later suggestions which only reach them after the work of revision has been partly completed.

The Times of India, Bombay, April, 1936

An Indian Glossary.

ABKALL.- Excise of liquors and drugs.

ACHRUT --- Untouchable (Hindi) Asuddhar.

TINDAL, tandel—A foreman, subordinate officer of a ship.

TIPAL, Teapoy — A table with 3 legs, and hence used of any small European style table.

TITAR .- Partridge.

Tola.—A weight equivalent to 180 grains (troy).

Tonga —A one or two horsed vehicle with a covered top, syn, SHIGHRAM.

TOTE—The word invariably used by South Indian planters to describe their estates. It is derived from the Kanarese thofa and similar words in Tamil and Malayalam meaning an estate.

TRINE.—Wild cattle found in Burma and to the southward, Bos SONDAIOUS syn. healing and banteng.

Tumandar.—A Persian word denoting some

ULEMA, (Plural of Alim).—Mahomedan learned

UMARA....Term implying the Nobles collectively. Plural of "Amir."

UMBAR -A wild fig-(FIOUS GLOMERATA).

UMEDWAR.—A hopeful person; one who works, without pay in the hope of gaining a situation; candidate.

UNIT.—A term in famine administration denoting one person relieved for one day.

Undu.—Hindustani language as spoken and written by Musalmans opposed to Hindi, spoken and written by Hindus.

URIAL.—A wild sheep in North-Western In lia, Ovis vigner.

URID, UDID -A pulse, black grain (PHA-EOLUS MUNGO).

URUS.—Mahomedan fete held in connexion ith celebration at the tomb of a saint.

USAR.—Soil made barren by saline efflorescence, Northern India.

USTAD.—Master, teacher, one skilled in any haren.

UTHAMNA.— Among Hindus, consolation visit paid on second or third day after the death of a person. Among Parais, a religious ceremony held on the third day after the death of a person.

VARIVATDAR.—Officer in charge of a revenue sub-division, with both executive and magisterial functions, Baroda; syn. tahsiidar.

VAID or Baidys (is also a caste in Bengal).—A native doctor practising the Hindu system of medicine.

VAELL.—(1) A class of legal practitioners; (2) an agent generally.

VEDA .- Revealed sacred books of Hindus.

VEDANTA .- The philosophy of the Upanishads.

VIHARA .-- A Buddhist monastery.

VILLAGE.—Usually applied to a certain area is is is survey, corresponding roughly to the English parish.

VILLAGE UNION.—An area in which local affairs are administered by a small committee.

WAAZ .- Mahomedan sermon.

WADA or WADI —(1) An enclosure with houses built round facing a centre yard; (2) private closed land near a village.

WAKF.—A Muhammadan religious or charitable endowment.

WALL.—Like "Sardar." The Governor of Khelat is so termed, whilst the Chiefs of Kabul are both "Wali" and "Mir."

WAO -A step well.

WATAK.—A word of many senses. In Bombay Presidency used mostly of the land of cash allowance enjoyed by the person who performs some service useful for Government or to the village community.

WAZIR.—The chief minister at a Mahomedan court.

WET BATK.—The rate of revenue for land assured of irrigation.

WRITER .- South Indian equivalent of babu.

YAMA .-- Hindu god of death.

Yoga.—A system of Hindu philosophy. Practice of breath control, etc., said to give supernatural powers.

Your —A Hindu ascetic who follows the Yoga system, a cardinal part of which is that it confers complete control over bodily functions.

YUNANI.—Lit. Greek; the system of medicine practised by Mahomedans.

ZABARDAST.—Lit. "Upper hand," hence strong, oppressive.

ZABARDASTI.—Oppression. ZAMINDAR.—A landholder.

ZAMINDAEL.—(1) An estate; (2) the rights of a landholder, zamindar; (3) the system of tenure in which land revenue is imposed on an individual or community occupying the position of a landlor.

ZANANA.—Of women. Women's apartment, harem.

ZIARAT.—Pilgrimage Ziarat-gah, any shrine or tomb to which people go in pilgrimage.

ZIKR.—Commemorative prayer said at the tomb of the prophet or a Mahomedan saint.

ZILA .- A District

ZOR-TALADI.—Tribute paid to Junagadh Darbar by numerous Kathiawar States. ZULM, ZULUM.—Tyranny. Oppression.

Manners and Customs.

Next to the complexion of the people, which viries from fair to black, the tourist's attention in India is drawn by their dress and personal decoration. In its simplest form a Hindu's ites consists of a piece of cloth round the loins. Many an ascetic, who regards dress a luxury, wears nothing more, and he would inspense with even so much if the police allowed him to. The Mahomedan always covers his legs, generally with trousers, sometimes with a piece of cloth tied round the waist and reaching to the ankles. Hill men and women, who at one time wore a few leaves before and behind and were totally innocent of clothing do not appear to-day within the precincts of civilisation and will not meet the tourist's eve Children, either absolutely nude or with a piece of metal hanging from the waist in front, may be seen in the streets in the most advanced cities, and in the homes of the rich free child Krishna, with all the jewels on his person, is nude in his pictures and images.

Dress.-The next stage in the evolution of the Hindu dress brings the loincloth nearly down to the feet. On the Malabar coast, as in Burma, the ende are left loose in front. In the greater part of India, they are tucked up behind—a fashion which is supposed to besit the warrior, or one end is gathered up in folds before and the other tucked up behind. The simplest dress for the trunk is a scarf thrown over the left shoulder, or round both the shoulders like a Roman toga. Under this garment is often worn a coat or a shirt. When an Indian appears in his full indigenous dress, he wears a long robe, reaching at least down to the calves: the sleeves may be wide, or long and sometimes puckered from the wrist to the elbow. Before Europeans introduced buttons, a coat was fastened by ribbons, and the fashion is not obsolete. The Mahomedan prefers to button his coat to the left, the Hindu to the right. A shawl is tied round the waist over right. A snaw is tred round the waits over the long coat, and serves as a belt, in which one may carry money or a weapon, if allowed. The greatest variety is shown in the head-dress. More than seventy shapes of caps, hats, and turbans, may be seen in the city of Bombay. In the Punjab and the United Provinces, in Bengal, in Burma and in Madras other varieties prevail. Cones and cylinders, domes and truncated pyramids, high and low, with sides at different engles; folded brims, projecting brims; long strips of cloth wound round the head or the cap in all possible ways, ingenuity culminating perhaps in the "parrot's beak" of the Maratha turban—all these fashions beak" of the Maratha turear—an trees assume have been evolved by different communities and in different places, so that a trained eye can tell from the head-covering whether the wearer is a Hindu, Mahomedan or Parsi, and whether he hails from Poona or Dharwar, Ahmeda bad or Bhavnagar.

Fashion Variations.—Fashions often vary with climate and occupation. The Bombay fisherman may wear a short coat and a cap, and may carry a watch in his pocket; yet, as he must work for long hours in water, he does not cover his leas, but suspends only a coloured kerchief from his waist in front. The Pathar

of the cold north-west wears loose baggy trousers, a tall head-dress bettting his stature and covers his ears with its folds as if to kep off cold. The poorer people in Bengal and Madras do not cover their heads, except when they work in the sun or must appear respectable Many well-to-do Indians were European dress at the present day, or a compromise between the Indian Christians and Parsis Most Parsis however have retained their own head-dress, and many have not borrowed the European collar and cuifs The majority of the people do not use shoes: those who can afford them wear sandals slippers and shoes, and a tew cover their feet with stockings and boots after the European fashion in public.

Women's Costumes.—The usual dress of a woman consists of a long piece of cloth tred round the waist, with folds in front, and one end brought over the shoulder or the head. The folds are sometimes drawn in and tucked up behind. In the greater part of India women wear a bodice; on the Malabar coast many do not, but merely throw a piece of cloth over the breast. In some communities petiticoats, or drawers, or both are worn. Many Mussainan ladies wear gowns and scarfs over them. The vast majority of Mahomedan women are aosha and their dress and persons are hidden by a veil whea they appear in public; a few converts from Hinduism have not borrowed the custom. In Northern India Hindu women have generally adopted the Mussalman practice of acclusion. In the Dekhan and in Southern India they have not.

As a rule the hair is daily oiled, combed, patted in the middle of the head, plaited and rolled into a chignon, by most women. Among high caste Hindu widows sometimes shave their heads in imitation of certain ascetics, or monks and nuns. Hindu men do not, as a rule, completely shave their heads, Mahomedans in most cases do. The former generally remove the hair from a part of the head in front, over the tempies, and near the neck, and grow it in the centre, the quantity grown depending upon the fancy of the individual. Nowadays many keep the hair cropped in the European fashion, which is also followed by Parsis and Indian Christians. Most Mussalmans grow beards, most Hindus do not, except in Bengal and elsewhere where the Mahomedan influence was paramount in the past. Parsis and Christians follow their individual inclinations. Hindu ascetics, known as Sadhus or Bairagis as distinguished from Sanyasis, do not ellip their hair, and generally coil the uncombed bair of the brad into a crest, in irritation of the god Shiva.

Hindu women wear more ornaments than others of the corresponding grade in society, Ornaments bedeek the head, the ears, the nose, the neck, the arms wrists, fingers, the waist until motherhood is attained, and by some even later—and the toes. Children wear anklets. Each community affects its peculiar ornaments, though imitation is not uncommon. Serpents with several heads, and flowers, like

the lotus, the rose, and the champaka, are among the most popular object of representation is gold or silver.

Caste Marks.—Caste marks constitute a mode of personal decoration peculiar to Hindus, sapecially of the higher castes. The simplest mark is a round spot on the forehead. It represents prosperity or joy, and is omitted in mourning and on fast-days. It may be red, or yellowish as when it is made with ground sandalwood paste. The worshippers of Vishnu draw a vertical line across the spot, and as Lakshmi is the goddess of prosperity, it is said to represent her. A more claborate mark on the forehead has the shape of U or V, generally with the central line, sometimes without it, and represents Vishnu's foot. The worshippers of Shiva adopt horizontal lines, made with sandalwood paste or ashes. Some Vaishnavas stamp their temples, near the corners of the eyes, with figures of Vishnu's conch and disc. Other parts of the body are also similarly marked. The material used is a kind of yellowish clay. To smear the arms and the chest with sandalwood paste is a favourite kind of toilet, especially in the hot season. Beads of Tuisi or sacred Basil, and berries of Rudraksha eucocarpus genutus, strung together are worn round their necks by Vassinavas and Shaivas,

respectively The Lingayats, a Shaiva sect suspend from their necks a metallic casket containing the Linga or phalius of their god. Bairagis, ascetics, besides wearing Rudraksha rosaries round their necks and matted hair, smear their bodies with ashes. Religious mendicants suspend from their necks figures of the gods in whose name they beg. Strings of cowries may also be seen round their necks. Mushim dervishes sometimes carry peacock's feathers.

Hindu women mark their foreheads with a red spot or horizontal line. High caste widows are forbidden to exhibit this sign of happiness, nor may they deck themselves with flowers or ornaments. Flowers are worn in the chignon. Hindu women smear their faces, arms, and feet sometimes with a paste of turmeric, so that they may shine like gold. The choice of the same colour for different purposes cannot always be explained in the same way. The red liquid with which the evil eye is averted may be a substitute for the blood of the animal slaughtered for the purpose in former times. In many other cases this colour has no such associations. The Muslim dervish affects green, the Sikh Akall is fond of blue, the Sanyasi adopts orange for his robe, and no reason can be assigned with any degree of certainty.

Indian Names.

The personal name of most Hindus denotes a material object, colour, or quality, an animal, a relationship, or a deity. The uncelucated man, who cannot correctly pronounce long Sanskrit words, is content to call his child, father, brother, uncle, or mother, or sister, as the case may be. This practice survives among the higher classes as well. Appa Saheb, Anna Rao, Babaji, Fapu Lai, Bhai Shankar, Tatacharya, Jijibhai, are names of this description, with honorific titles added. It is possible that in carly society the belief in the re-birth of departed kinsmen lent popularity to this practice. Nothing could be more natural than to call a man white, black, or red; gold or silver; gen dismond, ruby, pearl, or merely a stone; small or tall, weak or strong; a lion, a snake, a parrot, or a dog; and to name a woman after a flower or a creeper. Thus, to take a few names from the cples, Pandu means white, and so does Arjuna; Krishna black; Bhima terrible; Nakula a mongoose. Shunaka a dog; Shuka a parrot. Shringa a horn. Among the names prevalent at the present day Hira is a diamond. Ratina or Ratan a jewel; Sonu or Chinna gold. Velli or Belli, in the Dravidean languages, means white metal or silver. Hen are often called after the days of the week on which they were born, and hence they bear the names of the seven heavenly bodies concerned. When they begin to assume the names of the dreaded spirits worshipmed by them. To pronounce the name

of a devil is to invite him to do harm. If the spirits sometimes bear the names of human beings the reason seems to be that they were originally human

High-caste practices.—The high caste Hindu, on the other hand, believes that the more often the name of a deity is on his lips, the more merit he earns. Therefore he deliberately names his children after his gods and goddesses, so that he may have the opportunity of pronouncing the holy names as frequently as possible These are also sonorous and picturesque. Shiva is happy Vishnu is a pervader Govinda is the cowherd Krishna: Keshava has fine hair: Rama is a delighter: Lakshmana is lucky: Naizavana produced the first hiving being on the prinieval waters: Ganesha is the Lord of Shiva's hosts: Dinakara is the Luminary that makes the day: Subrahmanya is a brother of Ganesha Sita is a furrow: Savitri a ray of light: Tara a star: Radha prosperity: Rukmini is she of golden ornaments. Enama of the glowing heart. Shiva and Vishnu has each got at least a thousand names, and they may be freely drawn upon and paraphrased in naming one's children; and the whole Hindu pantheon is as crowded as it is large.

the names of the seven heavenly bodies concerned. When they begin to assume the names of the Hindu delties, they practically enter upon a new stage of civilisation. It is doubtful whether the Animists ever venture to assume the names of the dreaded spirits to assume the names of the dreaded spirits worshipped by them. To pronounce the name / This rule is fairly well observed in the case of

the first two titles, but the meaning of the other two has changed. Dasa means a slave other two nas changed. Dasa means a slave or servant, and the proudest Brahman cannot disdain to call himself the servant of some god. Thus, although Kalidas, the famous poet, was a Shudra, Ramadas, the famous guru of Shivaji, was a Brahmin. The Vaishayas have made this fashion of calling oneall a servant of some god exceedingly popular, and in Western India high caste Hindus of this sect very commonly add Das to their names. The Brahmans of Southern India add Alver or Alyaugar to their names. Shastri, Acharya, Bhat, Bhattacharya, Upadhyaya, Mukhopadhyaya, changed in Bengal into Mukeril, are among the titles indicative of the Brahmanical profession of studying and teaching the sacred bools. Among warlke classes, like the Rajputs and Sikhs, the title Singh (hon) has become mcre popular than the ancient Varma The Sindi Mal, as in Gidumal, means brave and has the same force Raja changed into Raya, Rao and Rai was a political title, and is not confined to any casta. Dutt and Mitra, Sen and Guha, enable one to identify the caste of their bearers, because the caste of a family or cian cannot be changed. Shet, chief of a guild or a town, becomes Chetty, a Vasshya title, in Southern India. Mudalivar and Nayudu, meaning leaders, are titles which were assumed by eastes of political importance under native rulers. Nayar and Menon are the titles of important castes in Malabar. Ram, Lal, Nand, Chand, are among the additions made to personal names in Northern India Suffixes like Ji, as in Ramji or Jamshedji, the Kanarese Appa, the Telugu Garu the feminine Bai or Devl. are honorific. Prefixes like Babu, Baba, Lala, Sodhi, Pandit, Raja, and the Burmese Maung are also honorific.

Professional names.-Family names sometimes denote a profession. in some cases they might have been conferred by the old rulers, Mehta, Kuikarni, Deshpande, Chitnavis, Mahalnavis are the names of offices held in former times. One family name may mean a flour seller, another a cane-seller, and a third a liquor-seller. To insert the father's name between one's personal and the family name is a common practice in Western India. It is rare elsewhere When a family comes from a certain place, the suffix 'kar' or 'wallah' is added to the name of the place and it makes a family surname in Western India. Thus we may have Chiplunkars and Suratwallahs, or without these affixes we may have Bhavnagris, Malabaris and Bilinorias, as among Parsis, Thus Vasudev Pandurang Chiplunkar would be a Hindu, whose personal name is Vasudev, his a lindu, whose personal name is vasuaev, his father's name Pandurang, and family name derived from the village of Chiplun, is Chiplunkar. In Southern India the village name precedes the personal name. The evolution of Musalman names follows the same lines as Hindu names. But Muslims have no god or goddesses, and their names are derived from their religious and secular history. These names and titles are often as long and picturesque as Hindu appellations. The agnomens Baksh, Din, Ghulam, Khwaje, Fakir, Kazi, Munshi, Sheikh, Syed, Begum, Bibi and others, as well as honoritic additions like Khan have meanings which throw light on Muslim customs and institutions. The Parsis also have no gods and goddesses, and their personal names are generally borrowed from their sacred and secular history. Their surnames frequently indicate a profession or a place, as in the case of Hindus in Western India Bathwallah, Readymoney, Contractor, Sakiatwallah, Adenwallah and others like them are tell-tale names

Indian Art.

in India there has never been so marked a exparation between what are now known as the Fine Arts, and those applied to industry as was the case in Europe during the nineteenth century. As, however, Industrial art forms the subject of a special article in this book, the term Indian Art will here be confined to Architecture, Sculpture and Painting

Historical.—The degree of proficiency attained in art by Indians prior to B. C. 250, can only be conjectured by their advancement in literature; and by the indirect evidences of Indebtedness shown by the works of the historic period, to those which preceded them; or direct records of artistic work of an earlier date than B.C. 250 do not exist. The chief historic schools of architecture are as follows:

Name. Dates. Locality of the best Examples.

Buddhist B.C.250— Ellora, Ajanta, Kali,
Jaina ... A.D.1000— Ellora, Mount Abu,
1300. Palitana.

Brahminical.. A.D. 500 to Ellora, Elephanta, the present Orissa, Bhuvanes-

Name Dates Locality of the best Examples. Chalukyan . A.D.1000-Umber. Somnathour. 1200. Ballur. Eliora, Tanjore, Ma-Dravidian A.D.1350-1750. dura, Tinnevelly, Delhi, Mandu, Jaun-Pathan ..A.D.1200-1550. pore. Indo-Saracenic A.D.1520-Lahore, Delhi, Agra,

Amber, Bijapur.

1760.

Buddhist Architecture is mainly exemplified by the rock-cut temples and monasteries found in Western India and in the Topes or sacred mounds. The interior decorations, and external facades of the former, and the rails and gates surrounding the latter point unmistakably to their being derived from wooden structures of an earlier period. The characteristic features of these temples are horse-shoe openings in the facades to admit light, and collonades of pillars with richly ornamented caps in the interior halls. Jaina Architecture is found in its most highly developed form in the Dilwara temples at Mount Abu. The ground plan consists of a shrine for the god or saint; a porch, and an arcaded courtyard with niches

is grace and lightness, with decorative carving covering the whole interior, executed with great elaboration and detail. Constructional methods suggest that original types in wood have been copied in marble.

Brahminical. Chalukyan and Dravidian styles differ little in essential plan, all having a shrine for the god, preceded by pillared por-ches The outer forms vary The northern Brahminical temples have a curved pyramidal roof to the shrines, which in the southern or Dravidian style are crowned by a horizontal system of storied towers, and each story, decreasing in size, is ornamental with a central cell and figures in high relief. The Chalukyan style is affected by its northern and southern neighbours, taking features from each without losing its own special characteristics of which the star-shaped plan of the shrine, with the fivefold bands of external ornament, is the prin-cipal feature. Pathan Architecture was cipal feature. Pathan Architecture was introduced into India by the Mahomedan invasion of the thirtecuth century At old Delhi are fine examples in the Lutub Mosque and Minar The characteristics of the style are severity of outline, which is sometimes combined with elaborate decoration due, it is stated, to the employment of Hindu craftsmen. The mosque-and tombs at Ahmedabad already show Hindu influence; but purer examples are to be found at Jaunpore and Mandu. Indo-Saracenic Architecture reached the climax of its development during the reigns of the Moghul Emperors Akbar, Jehangir and Shah Jahan. It eclipsed in richness of material and refinement of taste the building efforts of previous periods, it-crowning example being the Taj Mahal at Agra The buildings erected during the Adil Shahi dynasty at Bijapur at a slightly later date, exhibit a certain Turkish influence especially in the great tomb of Mahmoud. Though less refined and lacking the attraction of precious materials in their decoration, these splendid edifices are held in higher esteem by some critics than those of the Moghals, on account of their simplicity, grandeur and fine proportions. The era of great civil architecture in India was The era of great civil architecture in India was revived by the Mahomedan powers. Splendid palaces and fortresses were built at Madras, Delhi, Agra Fattchpore-Sikri and Bijapur, and the example thus set was copled by the Hindu princes at Jaipur, Udaipur and elsewhere in India. The application of great architectural treatment, unequalled in extent elsewhere, is to be seen in the Ghaute or steps enclosing lakes and on the banks of rivers. The most notable constructional contribution of the Mahomedans to Indian architecture was the introduction of the true arch and dome.

Sculpture.—The use of sculpture and painting in isolated works of art was practically non-existent in India until modern times. One or two reliefs and certain gigantic figures may be quoted as exceptions, but taken generally it may be stated that these arts were employed as the decorative adjuncts of architecture. No civil statuary, such as is now understood by the term, was executed; for no contemporary portrait figures, or busts in marble, or bronze, have come down to us from the ruins of ancient India, as they have from those of

for images. The characteristic of the style Egypt, Greece and Rome. Sculpture has been used exclusively as the handmaid of religion, and to this fact may be attributed the stereo typed forms to which it became bound. The lavish use of sculpture on Indian temples often aves good taste, and mars the symmetry and dignity of their mass and outline, but for exuberance of imagination, industrious elabo-ration and vivid expression of movement, Indian sculpture is pernaps without its equal elsewhere in the world. The most impressive specimens are the earliest, found in the Buddhist and Brahminical cave temples of Ellora, Ajanta and Elephanta. The great Trimurthi in the last named of these temples ranks for mystery and expressive grandeur with the greatest masterpieces of art.

> Painting.—Much of the carved stonework upon ancient Indian buildings was as in ancient Greece and then decorated with colour, but the only paintings, in the modern accepta-tion of the term, now existing, which were executed prior to the Moghul period, are those upon the walls of the cave temples at Ajanta, Bagh, and in Cevion. These remarkable works were produced at intervals during the first 600 years of the Christian era. They exhibit all the finer characteristic of the best Indian sculpture, but with an added freedom of expression due to the more tractable vehicle employed. The Ajanta Caves remained hidden in the Deccan jungles for nearly twelve hundred years, until accidentally discovered in 1816 They are painted in a species of tempore; and when first brought to light were well preserved, but they have greatly deteriorated owing to the well meant, but misguided action of copylets, and the neglect of the authorities. The Nizam's Govern-ment have in recent years done a great deal to-wards the preservation and study of these mural paintings The second period of Indian painting owed its origin to the introduction of Persian artists by the Moghul Emperor Akbar; and the establishment of the indigenous Moghul school was due to the encouragement and fostering was due to the encouragement and fostering care of his successors, Jehangir and Shah Jahar. Unlike the works of the Ajanta painters, which were designed upon a large scale, the pictures of the Moghul school were miniatures. They were executed in a species of opaque water-colour upon paper or vellum, resembling to some extent the illuminated missals produced by the monks in Europe during the middle ages. by the monks in Europe during the middle ages. Some of the finest of the earlier specimens in India are of a religious character; this phase of development being closely allied to the art of the caligraphist. As its range extended, a remarkable school of portrait painters arose notable for restrained but extremely accurate drawing, keen insight into character, harmonious colour, fine decorative feeling, and extraordinary delicacy and finish in the painting of detail. The artists of a Hindu off-shoot of this movement, known as the Rajput school, were less fully endowed with the technical and purely aesthetic qualities than were the Moghul painters; but they brought to their work poetry and sentiment which are not to be found in that of the Mahomedans. The pictures of both branches of the Moghul school, although highly decorative in character, were not intended for exhibi-tion upon the walls of rooms, according to

Western practice, and, when not used as illustrations or decorations to manuscript books, were preserved in portfolios.

Modern Painting.—As the reign of Shah Jahan exhibits the high tide of artistic develop-ment in India, so the reign of his successor Aurangreb marks the period of its rapid decline. The causes of this are attributable to the ab sence of encouragement by this Emperor; to his long periods of absence from the court at blehi or Agra, entailed by the continuous wars he waged in his efforts to bring the whole of the he waged in his efforts to bring the whole of the Peninsula under his rule; and partly to the lict of the school of Moghul painting becoming stereotyped in its practice. Foreign designers, painters and craftemen who had been attracted to India by the great works carried out by Akbar, Jehangir and Shah Jahan left the country, and their places were taken by no successors. The indigenous artists that the legical courts of small the country of small the school was at the school and courts of small the school was the school and courts of small the school was at the school was the school was at the school taken by no successors The indigenous artists left to themselves in the isolated courts of small Indian princes, or collected in schools in remote districts, employed themselves mainly upon repeating the works of a previous age, instead of seeking new motifs for artistic treatment of seeking new motals for artistic treatment at the time when the British East India Company ceased to be only a guild of merchants and became a great administrative power in 1757, very little vitality survived in the ancient art of the country. During the century of its administrative history between the battle of Plassey and the Indian Mutiny, the "Company" was too fully occupied in fighting for its existence, extending its borders and setting the internal economy of its ever increasing territories, to be able to give much attention to conserving any remnant of artistic practice which had survived. Without any deliherate intention of introducing western art into the country. Greek and its derivative style of architecture were adopted for public and private buildings in Calcutta, Bombay and Madras because these were found to be more suitable for their purpose than buildings of indigenous pattern. The practical result was the same; for the Indian craftsmen employed upon their erection were confronted with styles upon their erection were confronted with styles alfording no scope for the application of their traditional ornament and concerning which they had no knowledge or sympathy. As there were no sculptors in ladia capable of modelling or carving civil scalpture, the monuments to distinguish public servants were all imported from England; and the portraits, or other paintings which decorated the interior walls of the buildings were furnished by European pointers buildings, were furnished by European painters who visited India or by artists in England Although a considerable amount of research work of a voluntary nature was done by Archæ ologists, no official interest was taken in artistic education until the Government of India was transferred to the British Crown in 1859.

The Schools of Art then instituted throughout England in the 19th Century were imputated in India; and were attached to the educational system, which had been previously modelled upon a definitely European basis. The work of the Schools of Art in regard to industrial art is referred to elsewhere; and as several of them have confined their activities almost exclusively to this

branch of the subject it is sufficient to mention only the work of the Schools at Calcutta and Bombay in the present article. The Calcutta school, except for occasional experiments in the application of the graphic arts to lithography, engraving and stained glass, has become a school of painting and drawing. That at Bombay covers a wider field; for in addition to classes for modelling, painting and design it possesses a special school of architecture; and a range of technical workshops, in which instruction is given in the applied arts. It is in the principles underlying the instruction in painting that the schools at Calcutta and Bombay have taken almost diametrically opposite roads to reach the end they both have in view, namely, the revival of the art of painting in India by means of an indigenous school of Indian painters. Mr. Havell, who several years ago was the Principal of the Calcutta School, (he left India in 1907) banished from within its walls every vestige of European art, and claimed that the traditional art of India, in its old forms, is not dead, but merely sleeping or smothered by the blanket of European culture laid upon it for the last 150 years, and needed but to be released from this incubus to regan its pratine vigour.

Bombay School of Art .- The attitude towards the development of art in modern India taken by its successive Principals Messrs. Lockwood Kipling, Griffiths, Greenwood, and Cecil Burns, was on wider lines than that favoured by Mr. Havell. In general the view this School of Art has taken is that with European literature dominating the system under which the edu-cated classes in India are trained and with cauce classes in India are trained and with European ideas, and science permeating the professional commercial, industrial, and political life of the country, it is not possible for modern artists in India to work on purely archaic models, and that to copy these would be as upprofitable as it would be for the artists of Europe to harness themselves to the conventions of the Greek and Roman scuiptors or to those of the mediaval painters; that with European pictures, often of inferior quality illustrating every educational text book, and sold in the shops of every large city, it is essential for the proper education of art students that they should have before them the masterpieces of European art; and that, with the wide adoption of buropean styles of architecture in India, it is necessary for a school of art to possess the best examples of ornament applicable to the great historic styles, for the purpose of study and reference. There are certain basic principles common to the technique of all great art, such as fine and accurate drawing in its widest sense, composition and design, and the science of colour harmony.

Among the developments during Mr. Burns, administration were the founding of the Architectural School, the extension of drawing classes in the Government Schools, and the appointment of an Inspector of Drawing to inspect and report on the drawing classes in the schools. A Pottery Department was also started and was abolished in 1926, Mr. Burns retired in 1918 and was succeeded in 1919 by the present Director, Mr. W. E. Gladstone Solomon, K.I.H., R.B.C.

Mi Solomon entirely reorganised the course of study. The Life Classes which were organised at the end of 1919 have been pronounced by competent judges as well up to the level of the Life Classes of the European Schools of Art. But proficiency in technique forms only one side of the present system of training; for even in Europe, too much of the study from Life is quite capable of negativing its own object. In India, where the decorative instanct is inherent, and where the possibilities of freehand drawing are still understood, the danger of overdoing the Life Class is even more palpable. So side by side with these realistic aids to study, and at the same period, a class of Indian Decorative Painting was manugurated in the Bombay School of Art on a basis of scholarships under the patronage of the Governor of Bombay (Lord Lloyd). As this class specialises in Mural Painting it has long been popularly known as the Class of Mural Painting. Thiclass has executed the decorations for many public and private buildings, and painted the celling and panels of a specially constructed Indian Room which was exhibited at Wembley in 1924, and found a punchaser in England

The School of Art has of late years enjoyed the patronage of successive Governors of Bombay and, largely due to the efforts of Sir Leslie Wilson, the Government of India inaugurated a competition of Indian Artists in 1927 for the decoration of wall spaces in the new buildings at New Delhi. The result of the Competition was notified in October 1928, when five artists of Bombay, and the Bombay and Lahore Schools of Art were commissioned to paint Murai Decorations in the new Secretariat buildings. The Bombay School undertook the decoration of Committee Room "A" (in the North Block) and the paintings, which were executed in oils on Canvas, were inshed, and successfully placed in position on the dome and walls by the middle of September 1929. These deconations were original compositions of life size figures, symbolising the main

periods of Indian Art, and the different branches of the Fine and Applied Arts. In April 1929, the Government of Bombay converted the Bombay School into a Department independent of the Director of Public Instruction, the Principal (Mr. W. E. Gladstone Solomon) being made Director. In October 1930 the latter organised an (xhibiton of the work of all Departments of this School of Art in India House, London. The Exhibition was very well patronised by the art critics and the Press. Her Majesty the Queen Empress graciously patronised the exhibition and selected several of the paintings displayed.

Exhibiton in London.—The India Society of London organised an Exhibition of Modern Indian Art in London, which was opened by H H the Duchess of York at the New Burlington Gallenes on December 10, 1934. The most instructive teature of this Exhibition was that the representation of India was secured by means of Regional Committees which collected pictures and sculptures from their own districts the respective sections of the Exhibition devoted to Bombay and Bengal were compared, and the work from Western India received a most tayourable welcome from most of the most of the critics and prominent art. jonmals England, The Regional Committee of Bombay had selected a varied and fairly representative collection of paintings, sculpture, and architectinal drawings At the request of this Committee, the Government of Bombay deputed Mr. Gladstone Solomon to supervise, arrange, and catalogue the Bombay exhibits in London. The whole enterprise was a successful demonstration of the arms and ideals of the Bombay School of Paintmg, and since this Exhibition the long-standing controversy as to the Bombay methods of art training has completely collapsed though it is hardly to be expected that it will not occasionally reassert itself in sporadic outbursts hereafter

Indian Architecture.

The architecture of India has proceeded on lines of its own, and its monuments are unique among those of the nations of the world. An ancient civilization, a natural bent on the part of the people towards religious fervour of the contemplative rather than of the fanatical sort, combined with the richness of the country in the sterner building materials—these are a few of the factors that contributed to making it what it was, while a stirring history gave it both variety and glamour. Indian architecture is a subject which at the best has been ture is a subject which at the best has been studied only imperfectly, and a really com-prehensive treatise on it has yet to be written. The subject is a vast and varied one, and it may be such a treatise never will be written in the form of one work at any rate. The spirit of Indian art is foreign to the European and few can entirely understand it, while art criticism and analysis is a branch of study that the Indian has not as yet developed to its full extent. Hitherto the best authority on the subject has been Fergusson, whose compendious work is that which will find most ready acceptance by the general reader. But Fergusson attempted the nearly impossible task of covering the ground in one volume of moderate dimensions, and it is sometimes held that he was a man of too purely European a culture, albeit wide and eclectic, to admit of sufficient depth of insight in this particular direction. Fergusson's classification by races and religions is, however, the one that has been generally accepted hitherto. He asserts that there is no stone architecture in India of an earlier date than two and a half centuries before the Christian era, and that "India owes the introduction of the use of stone for architectural purposes, as she does that of Buddhism as a state religion, to the great Asoka, who reigned B.C. 272 to 236."

hen the Buddhist, of which the great tope A Sanchi with its famous Northern gateway perhaps the most noted example. Then we have the Gandharan topes and monas-Buropean tendency, variously recognized as Roman, Byzantine but most frequently as Freek, to be observed in the details. The toliage seen in the capitals of columns bears strong resemblance to the Greek acanthus, while the sculptures have a distinct trace of Greek influence, particularly in the treatment of drapery, but also of hair and facial expression From this it has been a fairly common assumption amongst some authorities that Indian art owed much of its best to European influence, an assumption that is strenuously combated by others as will be pointed out later.

The architecture of the Jains comes next in order. Of this rich and beautiful style the most noted examples are perhaps the Dilwars temples near Mount Abu, and he unique "Tower of Victory" at Chittore.

Other Hindu Styles.

The Dravidian style is the generic title usually applied to the characteristic work of the Madras Presidency and the South of India. It is seen in many rock-cut temples as at Ellora, where the remarkable "Kylas" is an instance of a temple cut out of the solid rock, complete, not only with respect to its interior (as in the case of mere caves) but also as to its exterior It is, as it were, a life-size model of a complete building or group of buildings, several hundred feet in length, not built, but sculptured in solid stone, ar undertaking of vast and, to our modern deas, unprofitable industry. The Pagoda of Tanjore, the temples at Srirangam, Chidambaram, Vellore, Vijayanagar, &c., and the palaces at Madura and Tanjore are among the best known examples of the style.

Amongst a vast number of Hindu temples the following may be mentioned as particularly worthy of study:—Those at Mukteswara and Bhuvaneswar in Orissa, at Khajuraho, Bin-drabun. Udaipur, Benares, Gwallor, &c. The palace of the Hindu Raja Man Singh at Gwalior is among the most beautiful architectural examples in India. So also are the palaces of Amber, Datiya, Urcha, Dig and Udaipur.

Indo-Saracenic.

Among all the periods and styles in India the characteristics of none are more easily recognizable than those of what is generally called the "Indo-Saracenic" which deve-loped after the Mahomedan conquest. Under the new influences now brought to bear on it the architecture of India took on a fresh leage of activity and underwent remarkable modifi-cations. The dome, not entirely an unknown

Buddhist Work. development, while the arch, at no time a Fergusson's first architectural period is tayourite constructional form of the Hindu hen the Buddhist, of which the great type builders was now forced with the first type builders. builders, was now forced on their attention by the predilections of the ruling class. The minaret also became a distinctive feature. The requirements of the new religion,—the receives. Perhaps the examples of Buddhist rechitecture of greatest interest and most ready access to the general student are to be found in the Chaltya halls or rock-cut caves of Karli, and, Nasik, Ellora, and Kanheri A point with relation to the Gandhara work may be illuded to in passing. This is the strong luropean endency, variously recognized as of the dependence of the buildings, and led to the development of the buildings, and led to the development of the buildings, and led to the development of the recognized as of the dependence of the buildings, and led to the development of the buildings, and led to the development of the buildings, and led to the development of the buildings. of other decorative forms. Great ingenuity came to be displayed in the use of pattern and of geometrical and foliated ornament. This Moslem trait further turned the attention of the builders to a greater extent than before to proportion, scale and mass as means of giving beauty, mere richness of sculptured surface and the esthetic and symbolic interest of detail being no longer to be depended on to the same degree.

> Agra and Delhi may be regarded as the principal centres of the Indo-Saracenic stylethe former for the renowned Taj Mahal, for Akbar's deserted capital of Fatchpur Sikri, ARDER'S deserted capital of raterpur Skri, his tomb at Secundra, the Moti Muslid and palace buildings at the Agra fort. At Delhi we have the great Jumma Muslid, the Fort, the tombs of Humayon, Sufdar Jung, &c., and the unique Qutb Minar. Two other great centres may be mentioned, because in each there appeared certain strongly marked individuanties that differentiated the varieties of the style there found from the variety seen at Delin and Agra, as well as that of one from hat to the other. These are Ahmedabad in Gujarat and Bijapur on the Dekhan, both in the Bombay Presidency.

> At Ahmedabad with its neighbours Sirkhel and Champanir there seems to be less of a depaiture from the older Hindu forms, a tendency to adhere to the lintel and bracket rather than to have recourse to the arch, while the dome though constantly employed, was there never developed to its full extent as elsewhere, or carried to its logical structural conclusion. The Ahmedabad work is probably most famous for the extraordinary beauty of its stone "jall"— or pierced lattice-work, as in the palm tree windows of the Sidi Sayyid Musid.

Bijapur.

The characteristics of the Bijapur variety of the style are equally striking. They are perhaps more distinctively Mahomedan than those of the Ahmedabad buildings in that here the dome is developed to a remarkable degree, indeed the tomb of Mahmud—the well-known "Gol Gumbaz"—is cited as shewing the greatest space of floor in any building in the world roofed by a single dome, not even excepting the Pantheon. The lintel also was here practically discarded in favour of the arch. The Bijapur style shews a bold masculine quality and a largeness of structural conception that is unequalled elsewhere in India though in richness and delicacy it does not cations. The dome, not entirely an unknow though in richness and denote, feature hitherto, became a special object of attempt to rival the work of the further North,

II. MODERN.

m nrs onat of the indigenous indian "Master-builder" to be found chiefly in the Indian States, particularly those in Rajputana Second there is that of British India, or of all those parts of the peninsula wherever Western ideas and methods have most strongly spread their indianas shidm in the const spread their influence, chiefly, in the case of architecture, through the medium of the Department of Public Works. The work of that department has been much animadverted upon as being all that building should not be, but, considering it has been produced by men of whom it was admittedly not the metier, and who were necessarily contending with lack of expert training on the one hand and with departmental methods on the other, it must be conceded that it can shew many notable buildlings. Of recent years there has been a tend-ency on the part of professional architects to turn their attention to India, and a number of these has even been drafted into the service of Government as the result of a policy initiated in Lord Curzon's Viceroyalty.

To the work of the indigenous "master-builder" public attention has of recent years been drawn with some insistence, and the suggestion has been pressed that efforts should be directed towards devising means for the preservation of what is pointed out—and now universally acknowledged—to be a remarkable survival-almost the only one left in the worldsurvival—almost the only one lett in the work— of "living art," but which is threatened with gradual extinction by reason of the spread of Western Ideals and fashions. The matter assumed some years ago the form of a mild controversy centring round the question of the then much discussed project of the Government of India's now capital at Delhi It was urged that this project should be utilised to give the required impetus to Indian art rather than that it should be made a means of fostering European art which needed no such encourage-

The modern architectural work of India the past. They still muster a considerable divides itself sharply into two classes. There following not only amongst the artistic public is first that of the indigenous Indian "Master- of England and India, but even within the of England and India, but even within the Government services. Their opponents, holding what appears to be the more official view both as to archæology and art, have pointed to the "death" of ail the arts of the past in other countries as an indication of a natural law, and deprecate as waste of energy all efforts to resist this law, or to institute what they have termed "another futile revival"! The British in India, they contend, should do as did the ancient Romans in every country on which they planted their conquering foot. As those were wont to replace indigenous art with that of Rome, so should we set our seal of conquest permanently on India by the erection of examples of the best of British art. This is the view which, as we have indicated, appears to have obtained for the moment the more influential hearing, and the task of designing and directing the construction task of designing and directing the construction of the principal buildings in the new Capital was accordingly entrusted jointly to two famous British architects, neither of whom can be unduly influenced by either past or recent architectural practice so far as ladia is concerned The building of New Delhi is perhaps too recent an event for the passing of a definite verdict. The work of Sir Edwin Lutyens and Sir Herbert Baker shildes the independ of presents. If that abides the judgment of posterity. If that work has had its severe critics, it has also received the commendation of many.

The controversy of East and West, however vital to the interests of the country's architecture, is too purely technical for its merits to be estimated by the general reader or discussed here—Its chief claim on our attention lies in the fact that it affords an added interest to the tourist, who may see the fruits of both schools of thought in the modern bridthat this project should be utilised to give the required impetus to Indian art rather than ings of British India as well as examples of the that it should be made a means of fostering "master builders" work in nearly every native European art which needed no such encourage ment at India's expense. The advocates of the side of the "master builders" work in nearly every native fown and bazaar. The town of Lashkar in Gwallor State may be cited as peculiarly rich in instances of picturesque modern Indian atreaty mentioned, and to have based their ideas on their own reading of in many different forms both civil and religious

Industrial Arts.

The ancient industrial arts of India formed | two distinct groups. The first included those allied to, and dependent upon, architecture; the second comprises those applied to articles devoted to religious ritual; military weapons and trappings, domestic accessories and to personal adornment.

The articles of the first group were intended for some fixed and definite position, and the style of their design and the character of their workmanship were dictated by that of the building with which they were incorporated. Those of the second group were movable, and the renew of their design was less constructed. the range (i their design was less constricted and their workmanship was more varied

Examples of work in both groups are so numerous, and the arts comprise such a diversity of application, that only a cursory survey can be attempted within the limits of a short review. Although the design and treatment differ in the two groups, the materials used were often the same. These materials cover a very wide lange but space only permits of reference to work applied to the four materials upon which the Indian craftsman's skill has been most extensively displayed. These are stone, wood, metal and textiles.

Before dealing separately with each of these materials a few words upon the principal Indian styles are necessary. The two distinctive styles tre Hindu and Mahomedan. The tormer may be termed indigenous, dating as it does from remote antiquity; the latter was a variation of the great Arabian style, which was brought into India in the fourteenth century, and has since developed features essentially Indian in character. The art of both Hindus and Mahomedans is based upon religion and the requirements of religious ritual. The obvious expression of this is shown in the different motifs used for their ornament. In Hindu art all natural forms are accepted and employed for decorative purposes; but in that of the Mahomedans, nearly all natural forms are rejected and forbidden. The basis of Mahomedan decoration is therefore mainly geometrical. In each of them, racial characteristics are strikingly exhibited. The keynote of Hindu work is exuberance, imagination and poetry; that of Mahomedan, reticence, intellect and good taste. The Hindus are lavish, and often undiscriminating in their employment of ornament; the Mahomedans use more restraint.

Stone Work.—Carved stone work is the principal form of decoration employed in Hindu temples. In variety and scope it ranges, from the massive figures in the liuddhist and Brahminical Cave Temples, and the detached sculpture of the temples of Southern India, to the delicately incised reliefs and elaborately fretted ornament of the Jain temples at Mount Abu. A curious fact in relation to Hindu work is that priority of date appears to have no relation to artistic development. It is not possible to trace, as in the case of Greek, Roman and Mediswal craftwork, the regular progressive steps from art in its primitive state to its culminating point and its subsequent decay. Styles in India seem to spring into existence fully developed; the earlier examples often exhibiting finer craftsmanship than those of a later date. There can be little doubt that stone carving in India was simply the application of the wood carvers' art to another material.

The stone carving on Mahomedan buildings except where Hindu carvers have been allowed a free hand, is much more restrained than that on Hindu temples. The fact that geometrical forms were almost exclusively used dictated lower relief and greater refinement in the carving; while the innate good taste of the designers prompted them to concentrate the ornament upon certain prominent features, where its effect was heightened by the simplicity of the rest of the building. The invention displayed in working out geometrical patterns for work screens, inlay, and other ornamental details appears to be inexhaustible; while wonderful decorative use has been made of Arabic and Persian lettering in panels and their framing. To obtain a rich effect the Hindus relied upon the play of light and shade upon broken surfaces, the Mahomedans to attain the same and used precious materials; veneering the surfaces of their buildings with polished marble which they decorated with patterns of mosaic composed of jade, agate, onyx and other costly stones. Although the art of inlaying and working in hard stones was of Italian origin, it proved to be one emmenty suited to the genius of the radian craftsman; and many wonderful examples of their skill in the form of book rests, tab-

les, thrones, footstools, vases and sword handles are extant to show the height of proficiency they attained.

Wood Work.—With a fine range of timbers suitable for the purpose, wood has played a great part in the construction and decoration of Indian buildings. Unfortunately, much of the ancient woodwork has been destroyed by the action of the climate and the teeming insectivorous life of India: and that which escaped these enemies was wiped out by are and the sword It is therefore only possible to conjecture the height of artistic development these buildings and their decorations displayed by the copies in stone which have been preserved. Few if any examples of a date earlier than the sixteenth century are to be found. Many of these, and specimens of a later date to be seen in towns and cities throughout the country, are masterpieces of design and craftsmanship. The carved timber fronts and inner courtvards of houses in Ahmcdabad, Nasik, and other parts of Western India are notable for their picture queness and beauty the structural beams, the overhanging balconies, with their screens and supporting brackets, being carved in a manner which unites richness of effect with good taste and propriety. Of furniture, as the term is now understood, few examples were in use in India before Europeans introduced their own fashions. These were confined to small tables and stools, book rests, clothes chests and screens, the designs of which conformed somewhat closely to the architectural style of the period. Many of these were decorated with inlaws of coloured woods, lvory and motel, while some case the woods. and metal; while in some cases the wooden basis was entirely plated with copper, brass or silver. In Southern India, where close grained sandalwood is grown, jewel cases and boxes are enriched with carving executed with the attention to detail and the finish generally associated with the carving of ivory. Coloured lac was freely used to decorate many articles of furniture, especially those turned on the lathe; and rich colour effects were obtained in this, perhaps the most distinctive and typically Indian development of decoration as applied to woodwork.

Metal Work.—With the exception of weaving, the metal working industry employed and still employs the greatest number of artistic craftsmen in India. Copper and brass have alwavs been the two metals most widely used for domestic purposes by Mahomedans and Hindus. The shapes of many of these humble vessels are among the most beautiful to be found in the country. They exhibit that sense of variety and touch of personality which are only given by the work of the human hand: and the working of the material with the simplest implements. In the technical treatment of brass and copper Indian craftsmen have shown a taste and skill unsurpassed by those of other nations, except in the department of fine casting. In this, and in the working of gold and silver, a higher standard of technical and constructive exactness has been reached by the metal workers of Europe and Japan. It may be taken as an axiom that the more beautiful the shape of an article is, and this especially

applies to metal work, the less need exists for the decoration of its surface. It is equally true that the highest test of craftsmanship is the production of a perfect article without any decoration. The reason being that the out any decoration. The reason being that the slightest technical fault is apparent on a plain surface, but can be hidden or disguised of one which is covered with ornament. The goldsmiths and silversmiths of India were extremely skilful and industrious, but judged by this test their works often exhibit a lack of care and exactness in the structural portion and a completely satisfactory example of perfectly lather work from the heads of the gold and feetly plain work from the hands of the gold and silversmiths of India is rarely to be met with Much of the excessive and often inappropriate ornamentation of the articles that they produced owed its application as much to the necessity of hlding defective construction as it dld to any purely decorative purpose

Textiles.—The textile industry is the widest in extent in India and is that in which her craftsmen have shown their highest achievements Other countries, east and west of India have produced work equal at least in stone, wood, and metal; but none has ever matched that of her weavers in cotton and wool, or excelled them in the weaving of silken fabrics. Some of the products of the looms of Bengal are marvels of technical skill and

perfect taste, while the plum bloom quality of the old Cashmere shawls is an artistic achievement which places them in a class by themselves. Weaving being essentially a process of repetition, was the first to which machinery was applied, and modern science has brought power loom weaving to such a state of perfection that filaments of a substance finer even than those of Dacca, which astonished our ancestors, are now produced in the mills of Lancashire. for beauty of surface and variety of texture no machine-made fabrics have ever equalled he finest handwork of the weavers of India. Many of the most beautiful varieties of Indian rany of the most beautiful varieties of indian-textile work have disappeared, killed by the com-petition of the power loom. In other branches of art as applied to textiles India does not hold so pre-emlnent a position as in that of weaving. The printed silks and calicoes of the seventeenth and eighteenth centuries deservedly held a high place in the estimation of Western nations, whose craftsmen learnt many valuable lessons from the technical skill, and artistic taste they display. Nothing approaching the tapestries made in Europe in the middle ages has been produced in India. The nearest approach to these is in carpets and rugs. This art was introduced from Persia; but Indian craftsmen have never succeeded in equalling the finest work of their instructors either in colour or design

Archæology.

The ancient monuments of India are as varied [including gold and silver jewellery, engraved as they are numerous. Until a few years ago, the earliest known were the brick and stone erections of the Maurya period, a group of mounds at Lauriya Nandangarh, iliustrative of the Vedic funeral customs and assignable roughly to the 7th or 8th century B C., and some rough stone walls at the ancient city of Rajagrlha of about the same period. The absence of structures of an earlier period was then supposed to be due to the fact that all previous architecture had been of wood and had completely perished. The recent excavations, however, at Mohenjo-daro, in Sind and at Harappa in the Punjab, have completely revolutionised ideas on this subject and proved that as far back as the 3rd or 4th millennlum B C, and probably much earlier still, India was in possession of a highly developed civilization with large and populous cities, well built houses, temples and public buildings of brick and many other amenities enjoyed at that period by the peoples of Mesopotamia and Egypt. Both at Mohenjo-daro and Harappa there are the remains of some 5 or 6 cities superimposed one upon the ruins of another

The structures that have so far been exposed at Mohenjo-daro belong to the three latest citles on the site. Those of the third or earliest are the best in style; those of the first the poorest Most of the structures are dwelling houses or shops, but there are others which appear to have been temples and one—of particularly massive proportions—is a large bath, surrounded which have come down to us from the Mauray by fenestrated galleries and halls. All were built of well burnt brick and most of them were of two or more storeys with staircases giving access to the upper rooms. In and around the putra (modern Patna), and of which a large ruins have been found many minor antiquities section has been exposed, the rock and pillar

scals of stone and ivory and paste copper implements and vessels, terracotta figurines and toys, shell ornaments and potteries both painted and plain.

These discoveries establish the existence in Sind and the Punjab during the 4th and 3rd millennia B C, of a highly developed city life, and the presence, in many of the houses, of wells and bathrooms as well as an elaborate drainage system betoken a social condition of the citizens at least equal to that found in Sumer and supenor to that prevailing in contemporary Babylonia and Egypt. The inhabitants of these cities lived largely no doubt by agriculture and it is a point of interest that the specimens of it is a point of interest that the specimens of wheat found at Mohenjo-daro resemble the common variety grown in the Punjab to-day Besides bread, their food appears to have included beef, mutton, and pork, the flesh of tortoises, turtles and gharial, fresh fish from the Indus and dried fish from the sea coast. Among their domesticated animals were the humped their contesticated animals were the numbed indian bull, the buffalo, a short horned bull, the sheep, pig, dog and elephant. Besides gold and silver they used copper, the bronze and lead; they were familiar with the arts of spinning and weaving and with the cultivation of cotton and had attained a high degree of proficiency in the jeweller's and potter's arts

period, include, besides the caves to be referred to below, the wooden palisade (4th century B.C.) which surrounded the ancient city of Patali-putra (modern Patna), and of which a large

carved with extraord nary precision and ac-curacy, and originally supported a wheel symbollzing the law of picty preached by the Buddha. Several pieces of this wheel were found and are now preserved in the Archæological Museum at Sarnath. Of the post-Asokan period one pillar (B.C. 150) stands to the north-east of Besnagar in the Gwalior State, another in front of the cave of Karl (A.D. 70), and a third at Eran in Central Provinces belonging to the 5th Century A.D. All these are of stone, but there is one of iron also. It is near the Qutb Minar at Delhi, and an inscription on it speaks of its having been creeted by a king called Chandra identified with Chandragupta II. (A.D. 375, 413) of the Gupta dynasty. It is wonderful to find the Hindus at that age forging a bai of iron larger than any that have been forged even in Europe to a very late date, and not frequently even now." Pillars of later style are found all over the country, especially in the Madras Presidency. No less than twenty exist in the South Kanara District. A particularly elegant example faces a Jama temple at Mudabidn, not far from Mangalore An interesting discovery was lately made concerning the Iron Pillar at Dhar, Cential India The Pillar is like that at New Delhi, one of those large sized products of ancient Indian metal, workers which have excited the admiration of modern metal-lurgists. The Pillar 15 now broken in three pleces, measuring together more than 43 feet in length, and there is reason to believe that a tourth piece 7 feet long has disappeared. The date and purpose of the Pillar were uncertain until a recent discovery which is of an inscription

base or to mark the scene of notable events in from epigraphic considerations that they are Buddhist or Jama legends. Though we know considerably more modern. The Buddhist caves that the ancient Jamas built stupes, no specimen are of two types—the chargus or chapt caves. of Jaina stupas is now extant. A notable and viharas or monasteries for the residence of structure of this kind which existed until recent monks. The first are with vaulted roofs and times, was the Jaina stupa which stood on the horse-shoe shaped windows over the entrance Kankah Tila site at Muttra and yielded a large and have interiors consisting of a nave and side number of Jaina sculptures now deposited in usles with a small stupa at the inner circular end.

edicts of Asoka (Curca 250 B.C.), the remains of its class. It consists of a low circular drum of a large pillared hall constructed by the same supporting a hemispherical dome of less diameter.

emperor at Pataliputra, a number of brick supporting a hemispherical dome of less diameter.

Round the drum is an open passage for circumsupported an Archivetter and the construction of surmounted an Asoka stup at Sarnath near sive stone railing with lotty gates facing the Benares. Altogether thirteen pillars of Asoka cardmal points. The gates are essentially tre known besides the Elephant capital wooden in character, and are carved, inside and of a 14th at Sankiya and a fragment of a 15th at Benares. Ten of them bear his inscriptions, Of these the Lauriya-Nandangarh column in the Champaran District, Tirhut, is practically erected by Asoka at the same time as his lionining lived. The capital of each column, like the shaft, was monolithic, and comprised three members, viz., a Persepolitan bell, abacus, and crowning sculpture in the round. By far the best capital of Asoka's time was that exhumed at Sarnath near Benames. The four hons standing back to back on the abacus are of Sarnath. the railing and the gateways were at least 150 and 200 years later, respectively. Other famous Buddhist stupas that have been found are those of Sarnath, Bharhut between Allahabad and Jubbulpore, Amravati in the Madras Presidency, and Piprahwa on the Nepalese frontier. The tope proper at Bharhut has entirely disappeared, having been utilised for building villages, and what remained of the rail has been reproved to the Scientia Museum. rail has been removed to the Calcutta Museum. The bas-reliefs on this rail which contain short mscriptions and thus enable one to identify the scenes sculptured with the Jatakas or Birth Stories of the Buddha give it a unique value. The stupa at Amravati also no longer exists, and portions of its rail, which is unsurpassed in point of elaboration and artistic merit, are now in the British and Madras Museums. The stupa at Piprahwa was opened by Mr. W. C. Peppe in 1898, and a steatite or soap-stone reliquary with an inscription on it was unearthed. The inscription, according to many scholars, speaks of the relics being of the Buddha himself and enshrined by his kinsmen, the Sakyas. It this interpretation is correct, we have here one of the stupus that were erected over the ashes of Buddha immediately after his demise.

Caves -Of the rock excavations which are one of the wonders of India, nine-tenths belong to Western India The most important groups of caves are situated in Bhaja, Bedsa, Karli, Kanheri, Junnar, and Nasik in the Bombay Ranheri, Junnar, and Nasik in the Bombay Presidency, Ellora and Ajanta in Nizam's Dominions, Barabar and Nagarjuni 16 miles north of Gaya, and Udayagiri and khandagir 20 miles from Cuttack in Orissa. The caves belong to the three principal sects into which ancient India was divided, viz., the Buddhists, Hindus and Jainas. The carliest caves so far discovered are those of Barabar and Nagarjuni which were accessed to his grants. of the time of the Paramara King Bhoja of Dhar, which were excavated by Asoka and his grandA D 1018-60, fragments of which were found on Dasaratha, and dedicated to Alivikas, a
n a Dhar mosque which occupies the site of a
naked sect founded by Mankhall putta Gosala,
grammar school established by that King This.
The next earliest caves are those of Bhaja,
is held to fix the period when the pillar was made
Topes.—Stupus, known as dagabas in Ceylon in No. 19 at Nasik. They have been assigned
and commonly called Topes in North India,
to 200 B C. by Fergusson and Dr. Burgess,
were constructed either for the safe custody
But there is good reason to suppose from
of relies hidden in a chamber often near the the Provincial Museum at Lucknow. Of those they are thus remarkably similar to Christian belonging to the Buddhists, the great Tope of basilicas The second class consist of a half Sanchi in Bhopal is the most intact and entire surrounded by a number of cells. In the later

riharas there was a sanctum in the centre of the back wall containing a large image of Buddha It is on the model of a complete structural temple but carved out of solid rock. It also is dedicated to Slva and was excavated by the Rashtrakuta king, Krishna 1, (A. D. 768), who may still be seen in the paintings in the cellings of the upper porch of the main shrine 768), Of the Jains caves the earliest are at Khandagiri and Udayagir; those of the medæval type, in Indra Sabha at Ellora; and those of the latest period, at Ankai in Nasik. The ceilings of many of these caves were once adorned with fresco paintings. Perhaps, the best preserved among these are those at Ajanta, which were executed at various periods between 350-650 A.D and have clicited high praise as works of art.

Gandhara Monuments .- On the north-west frontier of India, anciently known as Gandhara, are found a class of remains, ruined monasteries and buried stupas, among which we notice for the first time representations of Buddha and the Buddhist pantheon The tree use of Corinthian capitals, frieres of nude Erotes bearing a long garland, winged Atlantee without number, and a host of individual motifs clearly establish the a nost of individual motife cientry essaums the influence of Hellenistic art. The mound at Feshawar, locally known as Shah-ii-ki-Dhern, which was explored in 1809, brought to light several interesting sculptures of this school together with a reliquary casket, the most remarkable bronze object of the Gandhara period. The inscription on the casket left no doubt as to the mound being the stupa raised over a portion of the b dy relies of Buddha by the Indo Scythian king Kanishka. They were presented by Lord Minto's Government to the Buddhists of Burna and are now enshrined at Mandalay. To about the same age belong the stupus at Manikyala in the Punjab opened by Ranjit Singh's French Generals, Ventura and Court, in 1820. Some of them contained coins of kanishka. There was brought to light at Taxila during the winter of 1932-33 what proved to be the largest monastery so far unearthed m north-west India In it there was an inscription dated in the year 134 of an unspecified era and roughly corresponding with the year 76 A D

district of Cawrpore and the temples at Tigowa, other on pillars. They have been found from Nachus, Eran and Bhumara all of which belong to Shabbazgarhi 40 miles north-east of Peshawar the Gupta period and a later one at Tigowa in the Central Provinces. In South India we have two more examples wz., Lad Khan and Durga temples at Aihole in Bijapur, the latter of which

Aryan and Dravidian, whose differences become more and more pronounced from the 7th century onwards. In the Indo-Aryan style, the back wall containing a large image of Buddins more and more pronounced around the state of the Hindu cave temmost prominent ones tend to the perpendicular, ples that at Elephanta near Bombay is perhaps and in the Dravidlan to the horizontal. The the most frequented. It is dedicated to Siva and is not earlier than the 7th century A.D. But by far the most renowned cave-temple of tower. The most notable examples of the first the Hindus is that known as Kallasa at Ellora is kind are to be found among the temples of Dhulls is on the model of a complete structural baneswar in Orissa. Khajuraho in Bundelkhand, baneswar in Orissa, Khajuraho in Bundelkhand, osal in Jodhpur, and Dilwara on Mount Abu.
One of the best known groups in the Dravidish style is that of the Mamallapuram Raths, or 'Seven Pagodas,' on the seashore to the south of Madras. They are each hewn out of a block of granite, and are rather models of temples than raths. They are the earliest examples of typical Dravidian architecture, and belong to the 7th century. To the same age has to be assigned the temple of Kailasarath at Conjecveram, and to the following century some of the temples at Aihole and Pattadkal of the Bijapur District. Bombay Presidency, and the mono-lithic temple of Kailasa at Ellora, referred to above. Of the later Dravidian style the great temple at Tanjore and the Srirangam temple near Trichinopoly are the best examples.

Intermediate between these two main styles comes the architecture of the Deccan, called Chalukyan by Fergusson. In this style the plan becomes polygonal and star-shaped instead of quadrangular; and the high-storeyed spire is converted into a low pyramid in which the borizontal treatment of the Dravidian is combined with the perpendicular of the Indo-Arvan. Some fine even piles of this type aviet. Aryan. Some fine examples of this type exist at Dambal, Rattheli, Tilliwalli and Hangal in Dharwar, Bonibay Presidency, and at Ittagi and Warangal in Nizam's Dominions. But it is in Mysore among the temples at Hallebid Belur, and Somnathpur that the style is found in its full perfection.

Inscriptions.—We now come to inscriptions, of which numbers have been brought to light in India. They have been engraved on varieties of materials, but principally on stone and copper. The earliest of these are found incised in two distinct kinds of alphabet, known as Brahml and Kharoshthi, the latter being confined to the north-west of India. The Brahmi was read from left to right, and from it have been evolved all the modern vernacular scripts of India. The Kharoshthi was written from right to left, and was a modified form of the ancient Aramaic alphabet introduced into the Punjab The record is regarded as important because of the assistance it gives in dating Gandhari in the 5th century B.C. It was prevalent up to sculptures in various parts

Structural Temples—Of this class the Structural Temples—Of this class the Structural Temples—Of this class the earliest examples are the Varaha temple at Deogarh, District Jhans, another temple at Sanchi, the brick temples at Bhitargaon in the sanching temples are the sanching temples and spread to the sanching temples are the sanching temples. They have been found from to Nighva in the Nepal Tarai, from Girnar in Kathiawar to Dhauli in Orissa, from Kalsi in the Lower Himalayas to Siddapur in Mysore, showtemples at Aihole in Bipapur, the latter of which ing by the way the vast extent of territory held cannot be later than the eighth century A.D. by him. The reference in his Rock Edicts to without spires of any kind. In other respects chus II. of Syria, Ptolemy Philadelphus, and they are entirely different and already here we hark the beginning of the two styles, Indo-BC. 269 as the date of his coronation. His

Rumminder pillar inscription, sgain, discovered in Nepai Tarai, now settles, beyond all doubt, the birth-place of Buddha which was for long inspited. Another noteworthy record is the inscription of the Besnagar pillar. The pillar had been known for a long time but Sir John Marshall was the first to notice the inscription on it. It records the erection of this column, which was a Garuda pillar, in honour of the god Vasideva by one Heliodoros, son of Dion, who is described as an envoy of King Antial-kidas of Taxila. Heliodoros is herein called a Bhagavata, which shows that though a Greek he had become a Hindu and presumably a Vaishnava. Another inscription worth noticing and especially in this connection is that of Cave No. 10 at Nasik. The donor of this cave, Ushavadata, who calls himself a Saka and was thus an Indo-Scythian, Is therein spoken of as having granted three hundred thousand kine and sixteen villages to gode and Brahmanand as having annually fed one hundred thousand Brahmans. Here is another instance of a foreigner having embraced Hinduism. Thus for the political, social, economical and religious history of India at the different periods the only light but for which we are 'forlorn and bland.'

Saracenic Architecture — This begins in india with the 13th century after the permanent occupation of the Muhammadans Their first mosques were constructed of the materials of Hindu and Jaina temples, and sometimes with comparatively slight alterations. The mosque called Arhai-din-ka-jhompra at Ajmer and that near the Qutb Miner are instances of this kind. The Muhammadan architecture of India varied at different periods and under the various dynasties, imperial and local. The early Pathan architecture of Delhi was massive and at the same time was characterised by elaborate richness of ornamentation. The Qutb Minar and tombs of Altamsh and Ala-ud-din Khilji are typical examples. Of the Sharqi style we have three mosques in Jaunpur with several tombs. At Mandu in the Dhar State, a third form of Saracenic architecture sprang up, and we have here the Jami Masjid, Hoehang's tomb, Jahaz Mahal and Hindola Mahal as the most notable instances of the secular and

ecciesiastical styles of the Malwa Pathans. The Muhammadans of Bengal again developed their own style, and Pandua, Malda, and Gaur teem own styre, and rangus, maids, and Gaur teem with the ruins of the buildings of this type, the important of which are the Adina Masjid of Skandar Shak, the Elakhi mosque, Kadam Rasul Masjid, and so forth. The Bahmani lynasty of Gulbarga and Bidar were also great builders and adors of the state of the sta builders, and adorned their capitals with impor-tant buildings. The most striking of these is to me all mosque of Gulbarga, which differs from all mosques in India in having the whole central area covered over so that what in others would be an open court is here rooted by sixty-hree small domes. "Of the various forms which the Saracenic architecture assumed," "that of Ahmedabad may ays Fergusson, probably be considered to be the most elegant. It is notable for its carved stone work; and the work of the perforated stone windows in Sidl Sayyid's mosque, the carved niches of the minars of many other mosques, the sculptured Wihrabs and domed and panelled roofs is so xquisite that it will rival anything of the sort *xecuted elsewhere at any period. No other tyle is so essentially Hindu. In complete contrast with this was the form of architecture trast with this was the form of architecture employed by the Adil Shahi dynasty of Bijapur. There is here relatively little trace of Hindu forms or details. The principal buildings now left at Bijapur are the Jami Masjid, Gagan Mahal, Mihtar Mahal, Ibrahim Rauza and mosque and the Gol Gumbaz. Like their predecessors, the Pathans of Delhi, the Moghuls was a great building race. Their style first were a great building race. Their style first negan to evolve it elf during the reign of Akbar in a combination of Hindu and Muhammadan features. Noteworthy among the emperor's buildings are the tomb of Humayun, and the palaces at Fatehpur Sikri and Agra. Of Jehangir's time his mosque at Lahore and the tomb of Itimad-ud-daula are the most typical structures. "The force and originality of the style gave way under Shah Jahan to a delicate elegance and refinement of detail." And it was during his reign that the most splendid of the Moghul tombs, the Taj Mahal at Agra, the tomb of his wife Mumtaz Mahal, was con-structed. The Moti Masjid in Agra Fort is another surpassingly pure and elegant monu-ment of his time.

Indian Time.

For many years Indian time was in a state of chaotic confusion. What was called Madras or Railway time was kept on all the railways and each great centre of population kept its own local time, which was not based on any common scientific principle and was divorced from the standards of all other countries. It was with a view to remedying this confusion that the Government of India took the matter up in 1904, and addressed to the Local Governments, and through them to all local bodies, a long letter which reviewed the situation and made suggestions for the future. The essential points in this letter are indicated below

"In India we have already a standard time which is very generally, though by no means universally, recognised. It is the Madras local time, which is kept on all rallway and telegraph

lines throughout India and which is 5h 21m.
10s. in advance of Greenwich. Similarly,
Rangoon local time is used upon the railways
and telegraphs of Burma, and is 6h. 24m. 47s.
ahead of Greenwich. But neither of these
standards bears a simple and easily remembered
relation to Greenwich time.

"The Government of India have several times been addressed by Scientific Societies, both in india and in England, and urged to fall into line with the rest of the civilsed world. And now the Royal Society has once more returned to the attack. The Committee of that Society which advises the Government of India upon matters connected with its observatories, writes — The Committee think that a change from Madras time to that corresponding to a longitude exactly 5½ hours east of Greenwich would be an improve-

for international scientific purposes the hourly zone system, making the time 5 hours in advance of Greenwich in the west, and 6 hours in advance in the east of India would be preferable.'

"Now if India were connected with Europe by a continuous series of civilised nations with their continuous railway systems all of which had adopted the European hour-zen, system, it would be imperative upon India to conform and to adopt the second suggestion. But as she is not, and as she is as much isolated by uncivilised States as Cape Colony is by the ocean, it is open to her to follow the example of that and some other similarly situated colonies and to adopt the first suggestion.

"It is believed that this will be the better solution. There are obvious objections to drawing an arbitrary line right across the richest and most populous portions of India, and so as to bisect all the main lines of communication, and keeping times differing by an hour on opposite sides of that line India has become accustomed to a uniform standard in the Madris time of the railways; and the substitu-tion for it of a double standard would appear to be a retrograde step; while it would, in all probability, be strongly opposed by the railway authorities. Morcover, it is very desirable that whatever system is adopted should be followed by all Europeans and Indian, alike, and to nower by an entrope and incline and, and it is certain that the double standard would puzzle the latter greatly; while by emphasising the fact that railway differed from local time, it might postpone or even altogether prevent the acceptance of the former instead of the latter by people generally over a large part of India. The one great advantage which the second possesses over the first alternative is, that under the former, the difference between total and standard time can never exceed half an hour whereas under the latter it will even exceed an hour in the extreme cases of Karachi and Quetta But this inconvenience is believed to be smaller than that of keeping two different times on the Indian system of railways and telegraphs

"It is proposed, therefore, to put on all the rallway and telegraph clocks in India by 8m 50s. They would then represent a time 5; hours taster than that of Greenwich, which would be known as Indian Standard Time and the difference between standard and local time at the places mentioned below would be approximately as follows, the figures represent-ing minutes, and F. and S. meaning that the

ment upon the existing arrangements; but that time respectively .- Dibrugarh 51 S , Shillong 38 S., Calcutta 24 S., Allahabad 2 F , Madras 9 F., Lahore 33 F., Bombay 39 F., Peshawar 44 F., Karachi 62 F., Quetta 62 F.

"This standard time would be as much as 54 and 55 minutes behind local time at Mandalay and Rangoon, respectively, and since the railway system of Burma is not connected with that of India, and aircany keeps a time of its own, namely, Rangoon local time, it is not suggested that Indian Standard Time should be adopted in Burna It is proposed, however, that in-stead of using Rangoon Standard Time as at present, which is 6h. 24m 47s. in advance of Greenwich, a Burma Standard Time should be adopted on all the Burmese railways and telegraphs, which would be one hour in advance of Indian Standard Time, or 61 hours ahead of Greenwich time, and would correspond with 97° 30° E, longitude The change would bring Burma time into simple relation both with European and with Indian time, and would among other things) simplify telegraphic communication with other countries.

"Standard time will thus have been fixed for railways and telegraphs for the whole of the Indian Empire. Its general adoption for all purposes, while eminently advisable, is a matter which must be left to the local community in each case.

It is difficult to recall, without a sense of bewilderment, the reception of this proposal by various local bodies. Fo read now the fears that were entertained if Standard Time was adopted is a study in the possibilities of human error. The Government scheme left local bodies to decide whether or not they would adopt it. Calcutta decided to retain its own local time, and to-day Calcutta time is still twenty-four minutes in advance of Standard Pime. In Bombay the first reception of the proposal was hostile, but on reconsideration the Chamber of Commerce decided in tayour of it and so did the Municipality. Subsequently the opposing element in the Municipality brought in a side resolution by which the Municipal clocks in a succession of which he attinicipal clocks were put at Bombay time which is thirty-ninc minutes behind Standard Time. On the 1st January 1906 all the railway and telegraph clocks in India were put at Indian Standard Time, in Burma the Burma Standard Time became universal. Calcutta retains its former Calcutta time, but in Bombay local time is retained only in the clocks which are maintained approximately as follows, the figures representing minutes, and F. and S. meaning that the standard time is in advance of or behind local. Time is universal.

TIDAL CONSTANTS.

The approximate standard time of High Water may be found by adding to, or subtracting from, the time of High Water at London Bridge, given in the calendar, the corrections given as below :-

Coinage, Weights and Measures

pure silver) was approximately equal to 2s, or one-tenth of a £, and for that period it is they to convert rupees into sterling by striking off the final cipher (Rs 1,000—£100). But after 1873, owing to the depreciation of silver as compared with gold throughout the world, also used in official reports. there came a serious and progressive fall in the exchange, until at one time the gold value of the rupee dropped as low as 1s. In order to provide a remedy for the heavy loss caused to the Government of India in respect of its gold payments to be made in England, and also to relieve foreign trade and finance from the inconvenience due to constant and unfor seen fluctuations in exchange, it was resolved in 1893 to close the mints to the free comage of silver, and thus force up the value of the rupee by restricting the circulation. The intention was to raise the exchange value of the rupce to 1s. 4d., and then introduce a gold standard at the rate of Rs. 15=£1 From 1899 onwards the value of the rupes was maintained, with insignificant fluctuations, if the proposed rate of is. 4d. until lebruary 1920 when the recommendation of the Committee appointed in the previous year that the rupee should be linked with gold and not with sterling at 2s. instead of 1s. 4d. was adopted. This was followed by great fluctuations. (See article on Currency System).

Notation.—Another matter in connection with the expression of money statements in terms of rupees requires to be explained The method of numerical notation in India differs from that which prevails throughout Europe. Large numbers are not punctuated in hundreds of thousands and millions, but in lakhs and crores. A lakh is one hundred thousand (written out as 1,00,000), and a crore one hundred takhs or ten millions (written out as 1,00,00,000). Consequently, according to the exchange value of the rupce, a lakh of rupees (Rs 1.00.000) may be read as the equivalent of £10,000 before 1873, and as the equi valent of (about) £6,667 after 1899, while a crore of rupees (Rs. 1,00,00,000) may similarly be read as the equivalent of £1,000,000 before 1873, and as the equivalent of (about) £666,667 atter 1899. With the rupes at 1s 6d. a lakh equivalent to £7,500 and a crore is equivaent to £750,000.

Coinage.—Finally, it should be mentioned 'nat the rupee is divided into 16 annas, a fracto commonly used for many purposes by both Indians and Europeans The anna was remerly reckoned as 14d., it may now be ensidered as exactly corresponding to 1d. the anna is again sub-divided into 12 pies.

Weights -- The various systems of weights d in India combine uniformity of scales with " mense variations in the weights of units.

As the currency of India is based upon the The scales used generally throughout Northern rupee, statements with regard to money are India and less commonly in Madias and stangenerally expressed in rupees, nor has it been dardized in Bombay Presidency under the found possible in all cases to add a conversion Bombay Weights and Measures Act, 1932, may into stering. Down to about 1873 the gold be thus expressed as one maind =40 sects, value of the rupee (containing 165 grains of one secr=80 tolas The actual weight of sect values greatly from district to district and even trom village to village in India overett in Bombay Presidency In the standard system the tola is of 180 grains, and seer thus weighs 2 067 lbs. and the maund 82.28 lbs. This standard is

Retail.-For calculating retail prices, the universal custom in India is to express them in terms of seers to the rupee. Thus, when prices change what varies is not the amount of money to be paid for the same quantity, but the quantity to be obtained for the same amount of money. In other words, prices in India are quantity prices, not money prices. When the figure of quantity goes up, this of course means that the price has gone down, which is at first sight perplexing to an English reader. It may, however, be mentioned that quantity prices are not altogether unknown in England especally at small shops where pennyworths of many groceries can be bought. Eggs, likewise, are commonly sold at a varying number for the shilling. If it be desired to convert quantity prices from Indian into English denominations without having recourse to money prices (which would often be misleading), the following scale would break be insteading, the bloowing scale may be adopted—based upon the assumption that a seer is exactly 21b., and that the value of the rupee =(about) 3 lb. for 2s, 2 seers per rupee=(about) 6 lb. for 2s., and so on.

The name of the unit for square measurement in India generally is the bigha, which varies greatly in different parts of the country. But areas have been expressed in this work either in square miles or in acres.

Proposed Reforms.—Indian weights and measures have never been settled upon an organised basis suitable for commerce and trade characteristic of the modern age. They vary from town to town and village to village in a way that could only work satisfactorily so long as the dealings of towns and villages were self-contained and before roads and railways opened up trade between one and the other. If we take, for instance, the maund denomination of weight common all over India, we shall find that in a given city there are nearly as many maunds as there are articles to weigh. If we consider the maund as between district and district the state of affairs is worse. Thus in the United Provinces alone, is worse. Inus in the United Provinces alone, the maund of sugar weighs 48½ seers in Cawnpore, 40 in Muttra, 72½ in Gorakhpur, 40 in Agra, 50 in Moradabad, 43½ in Saharanpur, 50 in Barelliy, 46 in Fyzabad, 48½ in Shahelanpur, 51 in Goshangunge. The mannel when the worse all India from varies throughout all India from the Bengal or railway maund of 82-2/7 lbs to the Factory maund of 74 lbs. 10 oz. 11 drs., the Bombay maund of 28 lbs. which apparently answers to the Forest Department maund in use at the Fuel Depot, and the Madras maund, which | This Committee reported, in August 1916, some authorities estimate at 25 lbs. and others in favour of a uniform system of weights to be at 24 lbs, and so on.

Committees of Inquiry.—These are merely typical instances which are multiplied indefi-There are variations of every detail of weights and measures in every part of India The losses to trade arising from the confusion and the trouble which this state of things causes are heavy Municipal and commercial bodies are continually returning to the problem with a view to devising a practical scheme of reform. The Supreme and Provincial Governments have made various attempts during voses past to solve the problem of universal units of weights and measures and commerce and trade have agitated about the question for the past century. The Indian railways and Government departments adopted and Government departments adopted a standard tola (180 grams), seer (80 tolas) and Daund (40 seers) and it was hoped that this would act as a successful "lead" which would gradually be followed by trade throughout the empire, but the expectation has not been realised.

The Government of India considered the whole question in consultation with the pro-vincial Governments in 1890-1894 and various special steps have at different times been taken in different parts of India. The Government of Bombay appointed a committee ernment of Bombay appointed a committee in 1911 to make proposals for reform for the Bombay Presidency. Their final report has not been published, but they presented in 1912 an ad interim report which has been issued for public discussion. In brief, it points the proceeding impossibility of proceeding. out the practical impossibility of proceeding by compulsory measures affecting the whole of India. The Committee stated that over the greater part of the Bombay Presidency a standard of weights and measures would be ineartily welcome by the people. They thought that legislation compulsorily applied over large areas subject to many diverse conditions of trade and social life would not result in bringing about the desired reform so successfully as a "lead" supplied by local legislation nully as a lean supplied by local registation based on practical experience. The want of coherence, savour faire, or the means of cooperation among the people at large pointed to this conclusion. The Committee pointed out that a good example of the results that will salley a good lead is a page at in the East out that a good example of the results that will follow a good lead is apparent in the East Khandesh District of the Presidency, where the District Officer, Mr Simcox, gradually, during the course of three years, induced the people to adopt throughout the district united where weather and the course of the state of of the sta form weights and measures, the unit of weight in this case being a tola of 180 grains. the committee abstained from recommending that the same weights and measures should be adopted over the whole Presidency, preforring that a new system started in any area should be as nearly as possible similar to the best system already prevailing there

Committee of 1913.—The whole problem was again brought under special consideration by the Government of India in October, 1913, when the following committee was appointed to inquire into the entire subject anew -

Mr. C. A. Sliberrard (*President*). Mr. A. Y. G. Campbell. Mr. Rustomji Fardoonji.

adopted in India based on the 180 grain tola. The report says: -Of all such systems is no doubt that the most widespread and best known is that known as the Bengal or Indian Italiway weights The introduction of this system involves a more or less considerable change of system in parts of the United Prochange or system in parts of the United Provinces (Gorakhpur, Barelly) and neighbouring areas), practically the whole of Madras, parts of the Punjab (rural portions of Amritsar and neighbouring districts), of Bombay (South Bombay, Bombay city and Gujarat), and the Yorth-West Frontier Province. Burma has at present a se parate system of its own which the committee think it should be permitted to committee think it should be permitted to retain. The systems recommended are :-

The tola is the tola of 180 grains, equal to the rupee weight. The viss has recently been ixed at 3 60 lbs or 140 tolas

Government Action .- The Government of India at first approved the principles of the Report and left the Provincial Governments to take action, but they passed more detailed orders in January, 1922. In these they again, for the present and subject to the restrictions imposed by the Government of India Act and the devolution rules, left it entirely to local Governments to take such action as they think advisable to standardise dry and liquid measures of capacity within their provinces. Similarly, they announced their decision not to adopt all-India standards of length or area.

As regards weights they decided in favour of the standard mentioned under the heading "Weights", near the commencement of this article, this having been recommended by a majority of the Weights and mended by a majority of the Weights and Measures Committee and having received the unanimous support of the Local Govern-ments. At the same time they provi-lonally undertook to assist provincial legislation or standardisation and stated that "if subsequently, opinion develops strongly in favour of the Imperial standardisation of weights, the Government of India will be prepared to undertake such legislation, but at present they consider that any such step would be premature.

Provincial Government Action —Amongst the various Provincial Governments in India, Bombay Government is the only one which has taken action to standardize the weights and measures, etc , used in trade in the Presidency.

The Peoples of India.

It is essential to bear in mind, when dealing | lower by the Chamar. Probably the result of the with the people of India, that it is a continent ather than a country. Nowhere is the complex haracter of Indians more clearly exemplified than in the physical type of its inhabitants No one would confuse the main types, such as (urkhas, Pathans, Sikis, Rajputs, Burmans, Agas, Jamils, etc., nor does it take long to carry the differentiation much farther. The typical mhabitants of India-the Dravidians-differ altogether from those of Northern Asia, and more rearly resemble the tribes of Malaya, Sumatra and Madagascar. Whatever may be their origin, it is certain that they have settled in the country for countless ages and that their present physical characteristics have been evolved locally. They have been displaced in the North-West by successive hordes of invaders, including Aryans, Scythlans, Pathans and Moghals, and in the North-East by Mongoloid tribes allied to those of Burma, which is India only in a modern political sense. Between these foreign elements political sense. Between these foreign elements and the pure Dravidians is borderland where the contiguous races have intermingled.

The people of the Indian Empire are divided

by Sir Henry Risley (Caste, Tribe and Race, Indian Census Report, 1901; the Gazetteer of India, Ethnology and Caste, Volume I, Chapter 6) into seven main physical types. There would be eight if the Andamanese were included, but this tiny group of Negritos may be disregarded

The Turko-Iranian, represented by the Baloch, Brahui and Afghans of Baluchistan and the North-West Frontier Province. Probably formed by a fusion of Turkland Persian elements. in which the former predominate. Stature above mean; complexion fair; eyes mostly dark but occasionally grey; hair on face plentiful; head broad, nose moderately narrow, prominent, and very long. The feature in these people that strikes one most prominently is the portentous length of their noses, and it is probably this peculiarity that has given rise to the tradition of the Jewish origin of the Afghans.

The Indo-Aryan occupying the Punjab, Raj-putana, and Kashmir, and having as its charac-teristic members the Rajputs, Khattrıs, and Jats. This type, which is readily distinguish-able from the Turko-Iranian, approaches most closely to that ascribed to the traditional Aryan colonists of India. The stature is mostly tall; complexion fair; eyes dark; hair on face plentiful, head long; nose narrow, and prominent but not specially long.

The Scytho-Dravidian, comprising the Maratha Brahmans, the Kunbis, and the Coorgs of Western India. Probably formed by a mixture of Scythian and Dravidian elements. This type is clearly distinguished from the Turkc-Iranian by a lower stature, a greater length of head, a higher nasal index, a shorter nose, and a lewer orbito-nasal index. All of these characters. except perhaps the last, may be due to a varying degree of intermixture with the Dravidians. In the higher groups the amount of crossing seems to have been slight; in the lower Dravidian elements are more pronounced.

intermixture, in varying proportions, of the Indo-Intermixture, in varying proportions, or the indu-Aryan and Dravidian types. The head-form is long with a tendency to medium; the complexion varies from lightish brown to black; the nose ranges from medium to broad, being always broader than among the Indo-Aryans; the stature is lower than in the latter group and usually below the average according to the scale. The higher representatives of this type approach the Indo-Aryans, while the lower members are in many respects not very far removed from the Dravidians. The type is essentially a mixed one, yet its characteristics are readily definable, and no one would take even an upper class Hindustani for a pure Indo-Aryan or a Chamar for a genume Dravidian The distinctive feature of the type, the character which gives the real clue to its origin and stamps the Aryo Dravidian as racially different from the Indo-Aryan is to be found in the proportions of the nose.

The Mongolo-Dravidian, or Bengali type of Lower Pengal and Orissa, comprising the Bengal Brahmins and Kayasthas, the Maho-medans of Eastern Rengal, and other groups peculiar to this part of India. Probably a blend of Dravidian and Mongoloid elements, with a strain of Indo-Aryan blood in the higher groups' The head is broad; complexion dark; hair on face usually plentiful; stature medium; nose medium, with a tendency to broad. This is one of the most distinctive types in India, and its members may be recognised at a glance throughcut the wide area where their remarkable aptitude for clerical pursuits has procured them employment. Within us own habitat the type extends to the Himalayas on the north and to Assam on the eart, and probably includes the bulk of the population of Orissa; the western limit coincides approximately with the hilly country of Chota Nagpur and Western Bengal.

The Mongoloid type of the Himalayas, Nepal, Assam, and Burma, represented by the kanets of Lahul and Kulu; the Lepchas of Darjeeling and Sikkim the Limbus, Murmis and Gurungs of Nepal: the Bodo of Assam; and the Burmese. The head is broad; complexion dark, with a yellow tinge, hair on face scanty; stature short or below average; nose fine to broad, face characteristically flat; eyelids often oblique.

The Dravidian type extending from Ceylon to the valley of the Ganges, and pervading Madras, Hyderabad, the Central Provinces, most of Central India and Chota Nagpur. Its most characteristic representatives are the Paniyans of Malabar and the Santals of Chota Nagpur. Probably the original type of the population of India, now modified to a varying extent by the admixture of Aryan, Scythian, and Mongoloid elements In typical specimens the stature is short or below mean; the complexion very dark, approaching black, hair plentiful, with an occasional tendency, to curi, eves dark, head occasional tendency to curi; eyes dark; head long; nose very broad, sometimes depressed at the root, but not so as to make the face appear flat. This race, the most primitive of the Indian types, occupier the oldest geological formation in The Aryo-Dravidian or Hindustani, types, occupier the oldest geological formation in found in the United Provinces, in parts of Rajutana and in Bihar and represented in its upplicable and undulating plains which stretch ber strata by the Hindustani Brahman and in its

Comorin. On the east and the west of the peninsular area the domain of the Dravidian is conterminous with the Ghats, while further north it reaches on one side to the Aravallia, and on the other to the Rajmahal Hilla Where the original characteristics have been unchanged by contact with Indo-Aryan or Mongoloid people, the type is remarkably uniform and distinctive Labour is the birthright of the pure Dravidian whether hoeing tea in Assam, the Duars, of Ceylon, cutting rice in the swamps of Eastern Bengal or doing scavenger's work in the streets of Calcutta, Rangoon and Singapore, he is recognizable at a glance by his black skin, his squat figure, and the negro-like proportion of his nose. In the upper strata of the vast social formation had taken place.

deposit which is here treated as Dravidian these typical characteristics tend to thin and disappear, but even among them traces of the original stock survive in varying degrees.

The areas occupied by these various types do not admit of being defined as sharply as they must be shown on an ethnographic map. melt into each other insensibly; and although at the close of a day's journey from one ethnic tract to another, an observer whose attention had been directed to the subject would realise clearly enough that the physical characteristics of the people had undergone an appreciable change, he would certainly be unable to say at what particular stage in his progress the trans-

TOWN AND COUNTRY.

The progress of urbanisation in India-if very slow during the past thirty years, the whole increase being a little more than one per cent. The percentage of the urban population to the total is only 11, which however shows an increase of 0.8 per cent since the last census, due partly to the natural increase of the preexisting urban population and partly to nugration from rural areas. The percentage of urban population ranges from 3 4 in Assau to 22 6 in Bombay which is the most urbanised of the major provinces Compared to this, the urban population in France is 49 per cent, in Northern

Ireland 50-8 per cent, in Canada 53-7 per cent, in the U-S-A-56-2 per cent and in England and Wales 80 per cent

The greatest degree of growth has been in the number of towns with a population of from 20,000 to 50,000, the total population of which is now nearly double that of towns of 50,000 to 100,000 All classes of towns have increased in population, except those with populations of between 5,000 and 10,000 and those having under 5,000. Thus the large industrial and semi-industrial towns have benefitted at the expense of the smaller towns

Migration.—Of the population of the Indian this 268 870, Trinidad and Tobago 138,667, Empire only 730,546 were enumerated as born Birtish Guana 130,540, Fin 75,117 and much in other parts of the world Of these 595,078 smaller numbers in Tanganyika, Jamaica, are of Asiatle birth, 118,089 of European birth; Zanaibai, Uganda and Hong Kong There are and 17,379 others. The enigration from India about 11,000 Indians scattered in numbers of is approximately 2.5 million, the balance of india 2,000 in various other parts of the Birtish bary of the Birtish of the B nigration being against India.

Nearly all of these migrants are resident in other parts of the British Isles. The total number of Indians in the Empire outside India 2,2000 m various other parts of the British Isles. The total number of Indians in the Other parts of the British Isles. The total number of Indians in the Empire outside India 2,2000,000. Outside the Empire there are about 100,000 Indians, 25,000 in Indians, 25,00 Changes in-Population. 33

The Chart below gives at a glance the changes in India's population in the decade 1921-31—the stat, sex, in ban (ural and literacy.

RELIGIONS.

are excluded. As a matter of fact, Dr. Hutton, the Commissioner for the latest census, refers to an excess of zeal on the part of all parties to register as many adherents as possible in view, of the possibility of a communal franchise based on the census returns. "So high did feeling run over the return of religion in the Punjab", The enumerated totals of the Indihe says, "that disputes as to whether a man are set out in the following table was Adi Dharmi (Adherent of the original reli-

The subject of religion is severely contro- | gion) or Sikh added to a number of affrays and versial in India, where often it is coloured by at least to one homicide. Speaking broadly, politics and racialism. As the Year Book of every hundred persons in the Indian Empire alms at being impartial, all disputed inferences | 68 are Hindus, 22 Mahomedans, 3 Buddhists, at least to one homicide Speaking broadly, of every hundred persons in the Indian Empire 68 are Hindus, 22 Mahomedans, 3 Buddhists, 3 follow the religion of their tribes, one is a Christian and one a Sikh. Of the remaining 2 one is equally likely to be a Buddhist or a Christian, and the other most probably a Jain, much less probably a Parsi and just as possibly either a Jew, a Brahmo, or a holder of indefinite beliefs. The enumerated totals of the Indian religious

A feature of the above table is easily the large increase in the number of those returned as "miscellaneous". This is explained by the fact that the latest census grouped all those who returned their religion as Adi-Hindu, Adi-Dravida, etc., under "miscellaneous".

The Hindus largely predominate in the centre and south of India, and in the Madras Presidency they are no less than 88 per cent. of the populatone are no less than 35 per cent. of the popula-tion. Hindus are in the majority in Assam, Bihar and Orissa, he United Provinces, the Central India tracts, Rajputans and Bombay. Muhammadans monopolize the North-West Frontier Province, Baluchistan and Kashmir and are considerably in excess in the Punjab and Eastern Bengal and Sind. They form about 32 per cent of the repulation of Assam 15 per 32 per cent. of the population of Assam, 15 per cent. in the United Provinces and 10 per cent. in Hyderabad. The Buddhists are almost entirely in rydersoat. The Sudmiss streamost countries confined to Burma where they are 84 per cent of the population. The Sikhs are localized in the Punjab and the Jains in Rajputana, Ajmer-Merwara and the neighbouring States. Those who were classed as following Tribal Religious are chiefly found in Bihar and Orissa, the Central Provinces and Assam, but Bengal,

Burma, Madras, Rajputana, Central India and Hyderabad also returned a considerable number under this head. More than half of the total number of Christians reside in South India including the Hyderabad State. The remainder are scattered over the continent. the larger numbers being returned in the Punjab, the United Provinces, Bengal, Bihar and Orissa, Burma, Bombay and Assam. The Parsis and Jews are chiefly residents of the Bombay Presidency.

Christians .- The Christian community now or 1 79 per cent of the population This constitutes an increase of 32 5 per cent over the last census of which 20 per cent is ascribed to conversions during the decade 1921-31 60) per cent of Christians are returned from the Madras Presidency and its States, and the com-nunity can claim 35 persons in every 1,000 of the population of the British districts of Madras and as large a proportion as 27 per cent in Cochin and 31.5 per cent in Travancore. Elsewhere the Christians are scattered over the larger Provinces and States of India, the Punjab and Bihar and Orissa.

MAIN STATISTICS OF THE INDIAN EMPIRE.

The Census of India was taken on the night of February 24th in Burma and on that of 26th in India. The total population of India as thus ascertained is 852,837,778, vir. British Territory 271,526,933 and Indian States 81,310,845 giving an increase of 24,670,742 in British Territory and 9,224,556 in Indian States.

The following table shows the percentage of variation in the country's population at the last two censuses and in the last 50 years --

POPULATION OF PRINCIPAL TOWNS

It is claimed that the city of Calcutta contains 35,000 more inhabitants than Bombay which is the next largest city in India. There are nearly twice as many as there are in Calcutta proper as there are in Madras and almost three times as many as there are in Rangoon. Alone of the large cities of India, Bombay records, a decrease in population since the 1921 census. Labore which has expanded to more than half as large again as it was in 1921 has increased its population by actually a larger numbers during the decade than Calcutta. The same is true of Delh and Madras which increased by 47 per cent and 22 per cent, over their population of 1921. On the other hand, although the increase of 119,470 in the population of Calcutta during the last decade is greater than has been recorded in any of the other cities the percentage increase amounts to only 11 as compared with 21 5 in Karachi, 15 9 in Rangoon, 14.5 in to be found in the city proper included in the intuining large.

Special causes contribute to the high mortality i of infants in India.

Owing to the custom of early marriage, co-habitation and child-birth commonly take place habitation and chind-bird commonly case place before the woman is physically mature and this, combined with the primitive and insanitary methods of midwifery, seriously affects the health and vitality of the mother and through her of the child If the child survives the prenatal and natal chances of congenital debility and the risks of child-birth, it is exposed to the dangers of death in the early months of infe from diarrhoa or dysentery. According to the Executive Health Officer of Bombay city, by far the greater number of infantile deaths are due to infantile debility and malformation, including premature birth, respiratory diseases coming next, then convulsions, then diarrhea and enteritis.

Sex Ratio.—The figures of the population

has been going on since the beginning of this century. This shortage of females is characteristic of the population of India as compared to that of most European countries. The female infant is definitely better equipped by nature for survival than the male, but in India the advantage she has at birth is probably neutralised in infancy by comparative neglect and in adolescence by the strain of bearing children too early and too often. A good deal of recent work on sex ratios has tended to the view that an increase in masculinity is an indi-cation of declining population, but this is not the case in India as a whole. The all-India ratio is 901 females per 1,000 males for Muslims and 951 females per 1,000 males for Hindus. The only provinces in which there is actually an excess of women over men are Madras and Bihar and Orissa, though the Central Provinces can be added if Berar be excluded. Where females are in excess, the excess is still most marked in the lower castes and does not always of India by sexes, as recorded by the latest extend to the higher. Among the aboriginal rensus, show a further continuation of the steady tribes, however, the numbers of the two sexes tall in the proportion of females to males that

Marriage.—The subject of polygamy has been discussed fully in the report of 1911. Both Hindus and Muhammadans are allowed more wives than one, Muhammadans being nominally restricted to four. As a matter of practice polygamy is comparatively rare owing to domertic and economic reasons and has little effect on the statistics. The custom of polyandry is recognized as a regular institution among some of the tribes of the Himalayas and in parts of south India. It is also practised among many of the lower castes and aboriginal tribes. Its effect is reflected in the statistics of a few small communities such as the Buddhists of Kashmir where the proportion of married women to married men is exceptionally low, but otherwise the custom is of sociological rather than of statistical interest.

The table below shows the percentage for each sex of married persons who are under the age of 15 years.

Number per 1,000 of total married who are under 15 years.

Widows and Remarriage - Infant marriage naturally involves intant widowhood, a feature of no significance where remarriage is allowed, but of serious importance where it is not Widows among Hindus numbered just under widows among finders numbered just under two millions in 1931, but the general ratio of widows has decreased as compared with 1921 In the 1921 census there were 175 widows in every 1,000 females, a figure which had fallen in 1931 to 155. It is, however, Jams and

Hindus who place an effective ban on widow remarriage, and in both these communities the total ratio of widows has fallen; Jain widows in 1931 were 253 per 1,000 females, but in 1931 only 221, and the 1921 figure of 191 widows in every 1,000 Hindu females has tallen to 169 in 1931 On the other hand, there has already been a very remarkable increase in child widows particularly under the age of 5 years, which can be attributed to the rush of marriages anticipatory to the Child Marriage Restraint Act, a rush which it is to be feared will contribute large numbers of young widows to the figures of the 1941 census unless there is before then a very pronounced change of attitude towards widow remarriage in Hindu society generally. In every thousand Hindu women there are still 169 widowed, 22 of whom are under thirty years of age and over a quarter of those under 20, In spite of reformist movements to popularise widow remarriages, they are still uncommon enough to attract attention in Indian papers whenever they take place.

Proportion of widows in the population per 1,000 of all religions.

SOCIAL AND ECONOMIC CONDITIONS.

Literacy.—The number of persons in India in population and in spite of having started with Literate in the sense of being able to write a letter and read the reply.

Literacy, in the sense of ability to write a letter and to read the answer to it, has grown enormously in the past fifty years, although it is at present not very high in comparison with countries in the west. Ninety-five out of every 1,000 of the population are now literate, as against 82 ten years ago and less than 40 half a century ago. Burma leads the provinces in the matter of literacy; for in that province literacy, even if not of a very high order, is a beatter additional to both. habit, traditional in both sexes and all classes, both boys and girls being taught in the monateries of which almost every Burman village has at least one Cochin, Travancore and Baroda follow Burma in the order of literacy

a very high ratio, has been able to do more than keep pace with that growth.

Literacy is much more prevalent in towns than in the country, as both the need for, and the opportunities of, acquiring it are greater. An analysis of the population of the cities shows that 348 out of 1,000 males and 149 out of 1,000 females are literate, while the corresponding figures for literacy in English in towns are 1,473 males and 434 females.

'he country taken as a whole, female literacy is comparatively absent in India proper except in Kerala. Cochin State has more than one literate female to every two literate males and Travancore only a little less, while Malabar has nearly one to every three, Coorg a little less than one to every three, Baroda a little fewer Cochin State, in spite of a very rapid growth and Mysore one to every five. Besides the

the primary school leaving certificate.

Treated in communal or religious groups, the greatest progress has been made by Sikhs, Jains, Muslims and Hindus, in that order, but the leading literate communities are the Parsis, Jew-, Burmans, Jams and Christians The tollowing table analyses the position of the Indian communities in respect of literacy

There had been a continuous decline in the total number as well as in the proportion of persons recorded as afflicted up to 1901. This fall has been ascribed partly to a progressive improvement in the accuracy of the diagnosis and partly to an actual decrease in the pre-valence of the infirmities, owing to the improve-ment in the material condition of the people to better sanitation and (especially in the case of blindness) to the increasing number of cures effected with the aid of modern medical and surgical science. In the decade ending 1901 the relatively high mortality of the afflicted in the two severe famines must have been a considerable factor in the decline shown at that census, but the method of compilation adopted in 1901 and in the previous census was defective, and, certainly in 1901, many of the persons afflicted must have escaped notice in the course of tabulation. of tabulation. Compared with the year 1891, there was a slight decrease in the total number of persons recorded as afflicted in 1911, the proportion per hundred thousand persons falling from 315 to 267. The increase in ratio as well as in numbers since then is attributed to increased accuracy of enumeration.

Occupation.- It is a well known fact that the majority of the people in India live on agriculture. The latest census puts down the number of those engaged in the exploitation of animals and vegetation at 103,300,000, while those engaged in industry number 15,400,000. Thus about 67 per cent of the country's workers are employed in the former and 10 per cent. in the latter. This does not, however, mean that all the 103 millions are land-owners. Rights in land in India are complicated and involved to a degree, incredible to persons familiar only with the simpler tenures of western Europe.

Between the man who cultivates land and the man who nominally owns it there are often a number of intermediate holders of some interest or other in the produce of the land. If a com-parison is made between the area of land under crops and the number of agriculturists actually engaged in cultivation in British India, it is that for each agriculturist there are 2 9 acres of cropped land of which 0 65 of an acre is irrigated. The cultivation of special crops occupies under two per cent. of the populations concerned in pasture and agriculture, the greater part of whom are engaged in the production of tea Forestry employs fewer than special

In recent years there has been an increase in In recent years there has been an increase in the number of people living on the production and transmission of physical force, that is, heat, light, electricity, motive power, etc. Silk spinning and weaving, manufacture of chemical products, and the manufacture of tobacco have proved more popular than before. Transport by road has attracted more men, while the use of water for internal transport has decreased, harbours being used more freely for external transport by sea. About five million persons are engaged in organised industry.

It is noteworthy that less than one million people, who man, the army, the Navy, the air force, the police, the services, etc., manage the administration of this vast country; in other words, 350 odd millions are ruled by one million servants of the state.

There has of late been increasing unemployment, especially among the educated classes. An attempt to include these in the last census has not met with success, but it is significant that graduates of Madras University join the police department on Rs. 10 per mensem and are held fortunate in getting even that.

The Government of India.

ditions established to meet trading requirements. On September 24, 1599, a few years before the deaths of Queen Elizabeth and Akbar, the merchants of London formed an association for the purpose of establishing direct trade with the East and were granted a charter of incorpo-ration. The Government of this Company in England was vested in a Governor with a General Court of Proprietors and a Court of Directors. The factories and affairs of the Company tors. The factories and affairs of the Company on the Rast and West Coasts of India, and in Bengal, were administered at each of the principal settlements of Madras (Fort St. George), Bombay and Calcutta (Fort William), by a President or Governor and a Council consisting of the senior servants of the Company. The three "Presidencies" were independent of cother and subordinate only to the of each other and subordinate only to the Directors in England.

Territorial Responsibility Assumed.

The collapse of government in India consequent on the decay of Moghui power and the intrigues of the French on the East Coast forced the officers of the Company to assume terri-torial responsibility in spite of their own de-sires and the insistent orders of the Directors. Step by step the Company became first the dominant, then the paramount power in India. In these changed circumstances the system of government by mutually independent and un-wieldy councils of the merchants at the Presi-dency towns gave rise to grave abuses. Parliament intervened, and under the Regulating Act of 1773, a Governor-General and four act of 1773, a Governor-General and four counciliors were appointed to administer the Presidency of Fort William (Bengal), and the supremacy of that Presidency over Madras and Bombay was for the first time established. The subordinate Presidencies were forbidden to wage war or make treaties without the pre-vious consent of the Governor-General of Bengal in Council, except in cases of imminent necessity. Pitt's Act of 1784, which establish-ed the Board of Control in England, vested the administration of each of the three Presidencies in a Governor and three councillors, includcles in a Governor and three councillors, including the Commander-in-Chief of the Presidency Army. The control of the Governor-General-in-Council was somewhat extended, as it was again by the Charter Act of 1793. Under the Charter Act of 1833 the Company was dwas compelled to close its commercial business 1919.

The impulse which drove the British to India and it became a political and administrative was not conquest but trade. The Government body holding its territories in trust for the of India represents the slow evolution from conditions established to meet trading requirements. On September 24, 1599, a few years before the discount of the entire civil and military administration on September 24, 1599, a few years before the General-in-Council, and defined more clearly the nature and extent of the control to be extended over the subordinate governments.

After the Mutiny, there was passed, in 1858, an

Act transferring the Government of India from the Company to the Crown. This Act made no important change in the administration in India, but the Governor-General, as represent-ing the Crown, became known as the Vicercy. The Governor-General is the sole representa-tive of the Crown in India; he is assisted by a Council, composed of high officials, each of whom is responsible for a special department of the administration.

Functions of Government.

The functions of the Government in India are perhaps the most extensive of any great administration in the world. It claims a share in the produce of the land and in the Punjab and Bombay it has restricted the alienation of land from agriculturists to non-agricultur-lets. It undertakes the management of lander estates where the proprietor is disqualified. In times of famine it undertakes relief work and other remedial measures on a great scale. It manages a vast forest property and is the principal manufacturer of salt and opium, it owns the bulk of the railways of the country. It owns the bulk of the railways of the country, and directly manages a considerable portion of them; it has constructed and maintains most of the important irrigation works; it owns and manages the post and telegraph systems; it has the monopoly of the Note Issue, and it alone can set the mints in motion. It lends money to municipalities, rural boards, and agriculturists and occasionally to owners of historic states. It controls the saie of of historic estates. It controls the sale of liquor and intoxicating drugs and has direct liquor and intoxicating drugs and has direct responsibilities in respect to police, education, medical and sanitary operations and ordinary public works of the most intimate character. The Government has also close relations with the Indian States which collectively cover more than one-third of the whole area of India and comprise more than one-fifth of its population. The distribution of these great functions between the Government of India and the provincial administrations has fluctuated and was definitely regulated by the Reform Act of

THE REFORMS OF 1919.

Great changes were made in the system of government in British India by the Government of India Act, 1919, which, together with the rules framed under it—almost as important in their provisions as the Act itself—came into general operation in January 1921. The Act toured in India in the winter of 1918-19, and was the outcome of an inquiry conducted in lindia in the winter of 1917-18 by the Secrelary of State (Mr. Montagu) and the Vicercy latter year to make recommendations for the

(Lord Chelmsford), the results of which were embodied in their Report on Indian Consti-tutional Reform issued in the spring of 1918. The recommendations in this report were supplemented by those of two Committees which toured in India in the winter of 1918-19, and

modification of the system of administration of Indian affairs in the United Kingdom, and issued their Report while the Government of India Bill was under examination by a Joint Select Committee of both Houses of Parliament. The Joint Select Committee in their turn issued an exhaustive Report on the Bill, which was passed in a form practically identical with that recommended by the Joint Committee, and received the Royal Assent on the 23rd December 1919.

The Divisions.—British India for administrative purposes is divided into 15 provinces, each with its separate Local Government or administration. In ten of the provinces—the three Presidencies of Madras, isombay and Bengal, the United Provinces of Agra and Oudh, the Punjab, Bihar and Orissa, the Central Provinces, Burma, Assam and the North West Frontier Province—the Local Government consists of a Governor, an Executive Council of not more than four members, and two or more Ministers. Burma, which was excluded from the original scheme, was brought into line with it in 1922. An Act of Parliament was passed, constituting Burma a Governor's Province, with a Governor, an Executive Council elected on a very democratic tranchise, which gave the vote to women. The remaining provinces were then, inclusive of the N. W. Frontier Province, directly administered by Chief Commissioners, who are technically mere agents of the Central Government of India. No change was made by the Act of 1919 in the system of administration in these six minor provinces but the Frontier Province was, after the Burma precedent, made a Major Province in 1932.

Dyarchy.—In ten nine provinces the executive Government is a dual organism which owes its unity to the Governor. One half of the organism consists of the Governor and his executive Council, all of whom are appointed by the King. This bedy is responsible for the administration of those subjects which are "ra-gradem is the Governor acting with the advice of Ministers who are appointed by him, hold o ice during his pleasure, and must be elected members of the Provincial Legislative Council. To the Governor acting with Ministers is entrusted the administration of "transferred" subjects,

The Object.—The framers of the Act of 1919 had a twofold object in view. Their primary object was to devise a plan which would render possible the introduction by successive stages of a system of responsible government in British India in modification of the previous system under which the Governments in India both central and provincial, received their mandates from the British Parliament acting through the Secretary of State for India, the Cabinet Minister responsible to Parliament for the administration of Indian affairs,

The Provinces.—Starting from the premise that it was in the provinces that the first substantial steps must be taken towards the development of a system of responsible government the framers of the Act of 1919 provided

for a statutory demarcation of the functions to be exercised by the Government of India and the Provincial Governments respectively, in their administrative capacity. No attempt was made in this connection to limit the field open to the Indian Legislature, which still retains a concurrent (though not an overriding) power of legislation for the affairs of the provinces in general and of individual provinces; but the rules under the Act provide specifically for the exercise of this right in certain specified provincial matters, and the theory upon which the Act proceeds assumes that a convention will be established and rigorously observed which will confine in provincial affairs to matters so specified.

Finance.—The "revenues of India"—
or, rather, their sources—are definitely divided
between the Central and Provincial Governments; the Provincial Governments have
now almost complete control over the
administration of their "allocated "
revenues, they have power to supplement them by raising loans on the
security of these revenues, and their
right, subject in certain cases to the
Governor-General's sanction, to initiate new
taxation measures is formally recognised.

It was found impossible to devise any scheme of allocation of revenues between the Central and Provincial Governments which did not leave the former with a deficit. This deficit is to be met in part by an annual contribution from seven of the eight Governors' provinces, the province of Bihar and Orissa, owing to the comparative exignousness and inelasticity of its own revenues, having been exempted from this contribution. The aggregate sum thus due from the provinced to the Government of India at the outset was Rs. 983 lakhs, of which Madras contributed Rs. 348 lakhs, the United Provinces Rs. 240 lakhs, the Punjab Rs. 175 lakhs, and the other four provinces sums ranging from Rs. 15 lakhs to Rs. 64 lakhs. The annual contribution was in no case to be subject to increase in the future, and if reduction of the aggregate were found possible by the Government of India, reductions were to be made in fixed proportions from the quots of the several provinces. The Provincial contributions were gradually foregone and finally extinguished by the Government of India in the years of its successive annual prosperity Budgets before the commencement of the world wide economic depression in 1929.

Responsibility.—The first steps towards responsibility were to transform the Provincial Legislative Council into a body of sufficient size and with a sufficiently large elected majority (which the Act fixes at 70 per cent. as a minimum) to represent adequately public opinion in the province, and to create an electorate. The first franchise rules gave the vote to about 5,000,000 of the adult make population, and have enabled the Legislative Council of any "Governor's province" to extend to the franchise women.

The following table shows the strength and composition of each of the Provincial Councils:-

							Nominated		
	P	rovi	næ.			Elected.	Officials.	Non-officials.	Total.
Madras						90	23	, 6	127
Bombay	••	••		••		86	20	5	111
Bengal	••		••	• •	••	113	20	6	139
United Pr			••	••		100	18	5	123
Puniab			••	••	••	71	16	6	98
Bihar and	i Orissa					76	18	9	103
Central P	rovinces		••	••		53	10	5	68
Agsam	••					39	9	5	53
Burma					••	78	13	8	101
North-We	est Fron	tier	Provinc	е.		28	7	5	40

The figures for officials in this table are maxima in every case, and where less than the maximum number of officials is nominated to any Council, the number of nominated non-officials must be increased in proportion; e.g., if there are only 16 officials (nominated and ex-office) on the United Provinces Council, there must be seven nominated non-officials. The official members who have seats ex-officio are the members of the Executive Council, who are at present four in number, the statutory maximum in Madras, Bombay, and Bengal, three in Bihar and Orissa, and two in each of the remaining provinces. These Executive Councils contain an equal

number of Indian and British members except in Bihar and Orissa where two of the three members are British officials.

Electorates.—The electorates in each province are arranged for the most part on a basis which is designed to give separate representation to the various races, communities, and special interests into which the diverse elements of the Indian population naturally range themselves. Although there are minor variations from province to province, a table showing their character in one province (Bengal) will give a sufficiently clear idea of the general position.

	Class	of Ele	ctorat	θ.				No. of Electorates of this Class.	No. of Members returnable by Electorates of this Class.
Non-Muhammada	ц	•••			••			42	46
Muhammadan				••	••			34	39
European		• •						3	5
Anglo-Indian (in European and A	the	techni	cal ser					1	2
Landholders		•••				••		5	5
University	::		•••	•••	•••	•••		ĭ	ĺ
Commerce and In			•••		•••		::	8	15
				T	ota l			94	113

Of the 94 constituencies in Bengal, all but nine (those representing the University and Commerce and Industry) are arranged on a territorial basis, i.e., each constituency consists of a group of electors, having the prescribed qualifications which entitle them to a vote in a constituency of that class, who inhabit a particular area The normal area for a "Muhammadan" or "non-Muhammadan" constituency is a district (or where districts are large and populous, half a district) in the case of rural constituencies, and, in the case of urban constituencies, a group of adjacent municipal towns. Some large towns form urban constituencies by themselves, and the City of Calcutta provides eight separate constituencies, six "non-Muham-madan" and two "Muhammadan", the latter, ', the latter, of course, being coterminous with former.

Throughout the electoral rules there runs a general classification of the various kinds of constituencies into two broad categories, those

which are designed to represent special interests such as Landholders, Universities, Plan ters or Commerce being described as "special" constituencies, and those which are based on a racial distinction—Muhammadan, European, Sikh, etc.—being known as "general" constituencies.

Voters' Qualifications.—The qualifications for electors (and consequently for candidates) vary in detail from province to province,
chiefly on account of variations in the laws and
regulations which form the basis of assessment
of income or property values. Generally speaking, both in rural and urban areas the franchise
is based on a property qualification as measured
by the payment of a prescribed minimum of land
revenue or of its equivalent, or of income tax,
or of municipal taxes, but in all provinces retired,
pensioned or discharged officers and men of the
regular army are entitled to the vote. irrespective
of the amount of their income of

POWERS OF PROVINCIAL LEGISLATIVE COUNCILS.

In origin the legislative authority in British India was a meeting of the Governor-General (or, in the case of the Presidencies General (or, in the case of the Presidencies of Madras and Bombay, of the Governor) with his Executive Council, "for the purpose of legislation." When met for this purpose there were added to the Executive Council certain "additional members," at first very few in number, and those few all nominated by the Governor-General or the Governor, as the case might be. A Council so constituted had originally no powers or duties bayond those immediated the council so constituted had originally no powers or duties bayond those immediates immediated. ally no powers or duties beyond those immediately arising out of the discussion of the particular legislative measure which at the time was engaging its attention, and its functions were confined strictly to the discussion and enactment conined strictly to the date and the the number of "additional" members, and the proportion of these who were non-official Indians, were steadily increased, the principle of election was gradually substituted for nomination as the means of selecting non-official members, and the functions of the Councils were extended so as to include the right of interpellation, of the discussion of matters of general public interest, and of criticising and discussing public interest, and of criticising and discussing the budget proposals of the Executive Government. This extension of the powers of the Councils was in the main the result of the "Morley-Minto Act" of 1909. The Indian Councils Act of 1892 had given power to discuss the budget but not to divide the Council upon it Lord Morley's Act went further and provided that notwithstanding the terms of the Indian Councils Act of 1861 which had restricted the powers of all Councils to the discussion of legislative measures, the Local Government might make rules authorising the discussion of the annual financial statement, of any matter of general public interest, and the asking of ques-tions under such conditions and restrictions as might be imposed by the rules, and these rules recognised the right of the Councils to vote on motions thus submitted for their discussion. The other results of the Act of 1909 were definitely to recognise the principle of election as the means of selecting non-official members of all Councils (although the method adopted was mainly that of indirect election), a considerable increase in the number of both non-official and official members, and the setting up in every province of a non-official (though not, save in one province, an elected) majority. A further important, though indirect, result of the Morley-Minto Act was the appointment of an Indian member to the Executive Council of the Governor-General and to such Provincial Executive Councils as were then in existence and subsequently created.

Old System.—But although the Legislative Councils (which, originally created in two prorinces only in addition to the Governor-General's Legislative Council, existed in 1919 in nine rovinces) had steadily acquired a more and nore representative character and a large share of the normal functions of a legislative assembly s generally understood, they still remained in heory up to the passing of the Act of 1919 mere ccretions to the Executive Government of the rovinces for the purpose of advising on, and on of any department; and

enacting, legislation. It is true that the nonofficial element in the Provincial Councils as constituted by Lord Morley's Act of 1909 had acquired a considerable measure of control over legislation, in view of the fact that in most provinces that Act and the rules framed under it placed the non-official members in a slight majority over their official colleagues; but for various reasons this control even in the sphere of legislation, can hardly be described as definite popular control, and over matters outside the legislative sphere the Councils had no controlling voice at all.

The Changes.—The most important changes made by the Act of 1919 in the powers of the Provincial Councils were—

- (i) the power to vote (and consequently to withhold) supplies:
- (ii) a greatly enhanced freedom of initiation in the matter of legislation; and

(iii) power to frame their own rules of procedure in matters of detail, subject to the Governor's concurrence.

A further right which the Councils will acquire after four years from the time of their commencement is the right to elect their own President, At the outset the President is nominated by the At the outset the Fresident is nominated by the Governor, but from the start every Council has an elected Deputy President. The Governor (who formerly was exofice President of his Legislativa Council) no longer has any direct connection with its proceedings. The first-named of these newly acquired powers is of sufficient importance to require a detailed explanation of its scope, which can best be given in the terms of the Act itself (section 72D).

72D.—(1) The provisions contained in this section shall have effect with respect to business and procedure in governors' legislative councils.

(2) The estimated annual expenditure and revenue of the province shall be laid in the form of a statement before the council in each year and the proposals of the local government for the appropriation of provincial revenues and other moneys in any year shall be submitted to the vote of the council in the form of demands for grants. The council may assent, or refuse its assent, to a demand, or may reduce the amount therein referred to either by a reduction of the whole grant or by the omission or reduc-tion of any of the items of expenditure of which the grant is composed :-

Provided that

(a) the local government shall have power, in (a) the local government shall have power, in relation to any such demand, to act as if it had been assented to, notwithstanding the with-holding of such assent or the reduction of the amount therein referred to, if the demand relates to a reserved subject, and the governor certifies that the expenditure provided for by the de-mand is essential to the discharge of his res-resibility for the subject; and

mand is essential to the discussing of the possibility for the subject; and
(b) the governor shall have power in cases of smergency to authorise such expenditure as may be in his opinion necessary for the safety or tranquillity of the province, or for the carrying

- (c) no proposal for the appropriation of any such revenues or other moneys for any purpose shall be made except on the recommendation of the governor communicated to the council.
- (3) Nothing in the foregoing sub-section shall require proposals to be submitted to the council relating to the following heads of expenditure :-
- (i) Contributions payable by the local government to the Governor-General in Council; and
- (vi) Interest and sinking fund charges on loans ; and
- (iii) Expenditure of which the amount is prescribed by or under any law : and
- (iv) Salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council and
- (v) Salaries of judges of the high court of the province and of the advocate-general.

If any question arises whether any proposed appropriation of moneys does or does not relate to the above heads of expenditure, the decision of the governor shall be final.

Executive and Legislature.—In the light of these facts it is now possible to explain more exactly the relationship between the provincial executive and the provincial legislature. The dual character of the former has already been mentioned, and the corresponding bifurcation of provincial subjects into "reserved" and "transferred" categories. The rules under the act prescribe a list of 20 subjects which are transterred to the administration of the Governor acting with Ministers, the more important of which are Local Self-Government, Medical Administration, Public Health, Education (with certain reservations), Public Works, Agriculture, Excise, and Development of Industries. The "reserved" subjects comprise all those in the list of "provincial" (as distinct from "centerial"). tral ") subjects which are not transferred.

Machinery.—No change was made by the Act of 1919 in the machinery and methods of administration by the Governor in Council, decisions are taken at the Council Board, as before, by a majority vote, and the Governor is entitled, as before, to overrule such a vote in certain specified circumstances if he disagrees with it. For such decisions the Governor in Council remains, as before, responsible to the Secretary of State and Parliament, and on questions of legislation and supply he has the power of enforcing them despite opposition by a majority of the Legislative Council. But, the whole spirit of the Act and the existence of a large non-official elected majority in every Provincial Legislative Council is an important factor in determining the policy to be pursued by the official half of the Government in its administration of reserved subjects. A further and not less important factor is the existence in the Government, side by side with the Executive Council, of two or more Ministers appointed from the elected members of the legislature, who, though they are not charged by law with, and in fact are legally absolved from, any responsi-bility for decisions on matters outside the transferred sphere, will necessarily be able, and in fact are expected, to make their opinions felt by their colleagues in the Executive Council But bent on pursuing a policy in its administration these factors, while they will doubtless lead to which, in his judgment, was incompatible

constant endeavour on the part of the official half of the Government to accommodate its policy to the wishes of its ministerial colleagues and of the majority of the legislature, and to avoid situations which involve resort to the enforcement of its decisions in the face of popular opposition, are not intended to obscure the responsibility to Parliament in the last resort of the Governor in Council for the administration of reserved subjects and the right of His Majesty's Government, and of the Secretary of State as a member thereof, to lay down and require the observance of any principles which they regard as having the support of Parliament and in the last resort of the British electorate.

Transfer of Control.—With regard to transferred subjects the position is very different. Here there has been an actual transfer of control from the British elector and the British Parliafrom the British elector and the British Parliament to the elector and the Legislative Council in the Indian province. The provincial subjects of administration are grouped into portfolios, and just as each member of the Executive Council has charge of a portfolio consisting of a specified list of "reserved" subjects or "departments," so each Minister is directly responsible for the administration of those particular transferred "departments" which are included in his portfolio. But his responsibility. included in his portfolio. But his responsibility lies, not, as in the case of a member of the Exccutive Council, to the Government of India, the Secretary of State and Parliament, but to the Provincial Legislative Council of which he is an elected member and from which he is selected by the Governor as commanding or likely to command the support of the majority of that body. He holds office during the Governor's pleasure, but his retention of office is contingent on his ability to retain the confidence contingent on his some to retain the continuence not only of the Governor, but also of the Legis-lative Council, upon whose vote he is directly dependent for his salary. Further, the control of the Legislative Council over transferred subjects, both as regards supplies and legislation, is almost entirely free from the restrictions just noticed which necessarily quality its control over the "reserved" subjects. It is thus within the power of the Provincial Council to insist on the pursuit of a policy of its own choice in the administration of transferred subjects by withdrawing its confidence from a Minister who departs from that policy and bestowing it only on a successor who will follow its mandate and this power is dependent on the provincial elector in virtue of his freedom to control the composition of the Legislative Council by the use which he makes of his vote. No doubt this statement requires some qualification before it can be accepted as literally accurate, for technically, the authority charged with the administration of transferred subjects is "the Governor acting with Ministers appointed under this Act," not the Ministers acting on their own initiative, and, further the Governor, who is not, of course, subject to removal from office by the Legislative Council, removal from once by the Legislative Council, is charged personally with responsibility for the peace and tranquility of his province, and would be entitled, and indeed bound, to recommend the removal of a department from the transferred list if he found the legislature

with the maintenance of peace and tranquillity; are of opinion that the rules governing the al-yet the powers of control vested in the Legis- location of these revenues and balances should lative Council over the transferred sphere are undoubtedly great, and it was the opinion at all events of the Joint Select Committee that legislature and Ministers should be allowed legislature and admissers should be another to exercise them with the greatest possible freedom. "If after hearing all the arguments," observed the Committee, "Ministers should freedom. "If after hearing all the arguments," observed the Committee, "Ministers should decide not to adopt his advice, then in the opinion of the Committee the Governor should opinion of the Committee the Governor should of ordinarily allow Ministers to have their way, "fixing the responsibility upon them, even if "it may subsequently be necessary for him to vote any particular piece of legislation. It is not possible but that in India, as in all other than the contract of the property of the contract of the property of the contract of the property of "countries, mistakes will be made by Minister-"acting with the approval of a majority of the "Leyslative Council, but there is no way of "learning except through experience and "the realisation of responsibility."

Provision of Funds.—The terms of the Act leave the apportionment of the provincial revenues between the two halves of the executive for the financing of reserved and transferred subjects respectively to be settled by rules, merely providing that rules may be made "for "the allocation of revenues or moneys for the "purpose of such 'administration.' i.e., the "purpose of such administration." i.e., the "administration of transferred subjects by the "Governor cting with Ministers". Probably the best description available of the method adopted by the rules for the settlement of the matter is the recommendation of the Joint Select Committee whose proposals have been followed with one modification only to enable the Governor to revoke at any time, at the desire of his Council and Ministers an "order of allocation" or to modify it in accordance with their joint wishes. The passage is as follows :-

"The Committee have given much attention to the difficult question of the principle on which the provincial revenues and balances should be distributed between the two sides of the provincial governments. They are confident that the prob'em can readily be solved by the simple process of common sense and reasonable give-and-take, but they are awar that this question might, in certain circum-stances, become the cause of much fric-tion in the provincial government, and they

be framed so as to make the existence of such be framed so as to make the existence of such friction impossible. They advise that, if the Governor, in the course of preparing either his first or any subsequent budget, find that there is likely to be a serious or protracted difference of opinion between the Executive Council and his Ministers on this subject he should be empowered at once to make an allocation of revenue and balances between the reserved and transferred subjects which should continue for at least the whole life of the existing Legislative Council. The Com-mittee do not endorse the suggestion that certain sources of revenue should be allocated to reserved and certain sources to transferred subjects, but they recommend that the Gov-ernor should allocate a definite proportion of the revenue, say, by way of illustration, two-thirds to reserved and one-third to transthough not necessarily the same fraction of the balances. If the Governor desires assistance in making the allocation, he should be allowed at his discretion to refer the question to be decided to such authority as the Governor-General shall appoint. Further, the Committee are of opinion that it should be laid down from the first that, until an agreement which both sides of the Government will equally support has been reached, or until an allocation has been made by the Governor, the total provisions of the different expenditure heads in the budget of the province for the preceding financial year shall hold good.

"The Committee desire that the relation of the two sides of the Government in this matter as in all others, should be of such mutual sympathy that each will be able to assist and in-fluence for the common good the work of the other, but not to exercise control over it. budget should not be capable of being used as a means for enabling Ministers or a majority of the Legislative Council to direct the policy of reserved subjects; but on the other hand the Executive Council should be helpful to Ministers in their desire to develop the departments entrusted to their care. On the Governor personally will devolve the task of holding the balance between the legitimate needs of both sets of his advisers.

THE CENTRAL GOVERNMENT.

The structural changes made by the Act of 1919 in the system of government outside the "Governors' provinces" are of compara-tively minor scope, though the spirit of the Act requires, as has already been shown, considerable modification of the relationship hitherto subsisting between the Provincial Governments on the one hand and the Government of India and the Secretary of State in Council on the other. The only concrete changes made in the constitution of the Central Government are the removal of the statutory bar to the appointment of more than six me...bers of the Governor-General's Executive Council (which, however, has had the far-reaching consequence that three of the eight members of the Council are now Indians), and the reconsti-tude Council are now Indians), and the reconsti-tude Council are now Indians), and the reconsti-tude of the Council are now Indians, and the Indians of and independent form of the central legisla- ordinarily attributed to such a body save such

ture. It has already been observed that this body was, in origin, like all other legislative bodies in India, the Governor-General's Executive Council with the addition of certain "additional members" appointed to assist "additional members" appointed to assist the Executive Council in the formulation of legislation. Despite its steady growth in size and influence, and despite the introduction of the elective system, the existence of "addi-tional members," who of course under Lord Morley's Act greatly preponderated in numbers over the members proper (.e., the Executive Councillors, still persisted up to the passing of the Act of 1919. That Act however, has en-tirely remodelled the "Indian Legislature,"

as are specifically withheld by the terms of the Act. It consists of two Chambers. The "Council of State" contains 60 members, of "Council of State" contains 60 members, of whom 34 are elected (including one member to represent Berar, who, though technically nominated, is nominated as the result of elections held in Berar) and 26 nominated whom not more than 20 may be officials. The "Legislative Assembly" consists of 144 members, of whom 105 are elected (including in the case of the Council of State, one Berar member who, though actually elected, as technically a nominated. nically a nominee). Of the 40 nominated members, not fewer than one third are required to be non-officials. The members of the Governor-General's Executive Council are not ex-officio members of either Chamber, but each of them has to be appointed a member of one or other Chamber, and can vote only in the Chamber of which he is a member. Any member of the Executive Council may, however, speak in either Chamber The President of the Upper Chamber is a nominee of the Governor-General, as also, for the first four years after the constitution of the Chamber, was the President of the Legislative Assembly. But after that period the Lower Chamber elected its own President, and it elected its own Deputy-President from the outset. The normal lifetime of each Council of State is five years, and of each Legislative Assembly three years; but either Chamber, or both simultaneously, may be dissolved at any time by the Governor-General.

Election.—The method of election for both Chambers is direct, and although the number of electors is considerably smaller than for the Provincial Councils, it is a great advance on the very restricted and for the most part indirect franchise established under the Act of 1909 for the unicameral central legislature which no longer exists. Generally speaking, the electoral scheme for the Lower Chamber is on the same model as that for the Provincial Councils already described except that, firstly, the property qualification for voters (and consequently for candidates) is higher in order to obtain manageable constituencies, and past service with the colours is not per se a qualification for the franchise, and secondly, that the constituencies necessarily cover a considerably larger area than constituencies for the Provincial Council. The distribution of seats in both Chambers, and the arrangement of constituencies, are on a provincial basis; that is a fixed number of the elective seats in cach Chamber is assigned to representatives or each province, and these representatives are elected by constituencies covering an assigned area of the province.

The following table shows the allotment of

the elective seats:-

		gislative sembly,	Council of
Madras		16	5
Bombay		16	6
Bengal		17	6
United Provinces		16	5
Punjab		12	4
Bihar and Orissa		12	3
Central Provinces		6	2
Assam		4	1
North-West Frontie	r Prov	incel	••

Burma			4	2
Delhi	••	••	105	34
			100	94

Since the area which returns perhaps 80 members to a Provincial Council is the same as the area which returns perhaps 12 members to the Legislative Assembly—namely, the entire province in each case—it follows that on the direct election system this area must on the direct election system with are much be split into constituencies which are much larger than the constituencies for the local Councils, and just as it is generally correct to say that the normal area unit for those rural constituencies for the latter which are arranged on a territorial basis is the district, it may be said that the normal area unit in the case or the Legislative Assembly is the Division (the technical term for the administrative group of districts controlled by a Divisional Commissioner).

The Franchise.—The general result of the first franchise arrangements under the Act 18 thus that there is in each province a body of electors qualified to vote for, and stand for elec-tion to, the Provincial Council, and that a selected number of these voters are qualified to vote for and stand for election to those seats in the Legislative Assembly which are assigned to the province The qualifications for candidature for the Legislative Assembly are the same in each province, mutates mutanais, as for candidature for the Provincial Council, except that in all provinces, so long as the candidate can show that he resides somewhere within the province, no closer connection with his particular constituency is insisted upon.

The franchise for the Council of State differs in character from that for the Provincial Council and the Legislative Assembly. The concern of the framers of the Act and rules was to secure for the membership of this body a character as for the membership of this body a character as closely as possible approximating to a "Senate of Elder Statesmen" and thus to constitute a body capable of performing the function of a true revising Chamber. With this object, in addition and as an alternative to a high property qualification—adopted as a rough and ready method of entranchising only persons with a take in the country—the rules admit as cubic a stake in the country—the rules admit as qualifications certain personal attributes which are likely to connote the possession of some past administrative experience or a high standard of untellectual attainment. Examples of these qualifications are past membership of either Chamber of the Legislature as now constituted, or of its predecessor, or of the Provincial Council, the holding of high office in local bodies (district boards, municipalities and corporations), membership of the governing bodies of Universities, and the holding of titles conferred in recognition of Indian classical learning and literature.

Powers.—The powers and duties of the Indian legislature differ but little in character within the "central" sphere from those of the provincial Councils within their provincial sphere, and it has acquired the same right of voting supplies for the Central Government. But as no direct attempt has yet been made to introduce responsible government at the centre, the step in that direction having been avowedly confined to the provinces and as consequently the Executive Government of India remains legally responsible as a whole for the proper fulfil-

ment of its charge to the Secretary of State and Parliament, it follows that the powers conferred on provincial Governors to disregard an adverse vote of the Legislative Council on legislation or supplies are, as conferred on the Governor- their application to categories of subjects.

General in his relationship with the Indian Legislature, less restricted in their operation than in the provinces; that is to say, they cover the whole field and are not comfined in

The Act of 1919 makes no structural changes in the role of the India Office in the administration of Indian affairs. Slight alterations have been effected in the number and tenure of office of the members of the Secretary of State's Council, and some relaxations have been made in the statutory rigidity which formerly bound their procedure and that of the Office in general. But provisions now exist which have undoubtedly as time went on had a material effect on the activities of the Office as it is now constituted. A High Commissioner for India was appointed for the purpose of taking over, as the direct agent of the Government of India, that portion of India Office functions which is of the nature of agency, as distinct from administrative supervision and control The process of separation of staff and functions for the purpose of this transfer was necessarily be somewhat slow, but a substantial beginning was made by handing over to the direct control of the High Commissioner the large departments which are concerned with the ordering and supply of stores and stationery in England for Government use in India, with the payment of pensions to retired members of Indian services resident in

PERSONNEL AND PROCEDURE.

The Governor-General and the "Executive" members of his Council are appointed by the Crown. No ilmit of time is specified for their tenure of office, but custom has fixed it at five years. There are seven Executive Members of Council. These Members hold respec-Land; Home; Finance; Commerce & Railways, Industries and Labour; Law. The Viceroy acts as his own member in charge of Foreign affairs. Railways are administered by a Chief Commissioner with the assistance of a Railway Board; and are for administrative purposes grouped under the ægis of the Rallways Department. The Commander-in-Chief may also be and in practice always is, an "Ordinary" member of the Council, He holds charge of the Army Department. The Governors of Madras, Bombay and Bengal become "extraordinary", members if the Council meets within their Presidents. dencies. The Council may assemble at any place in India which the Governor-General appoints In practice it meets only in Delhi and Simla except for a meeting or two in Calcutta after Christmas, when the Viceroy is usually in residence in the Bengal Capital.

In regard to his own Department each Mem-The regard to his own beparement each member of Council is largely in the position of a Minister of State, and has the final voice in ordinary departmental matters. But any question of special importance, and any matter in which it is proposed to over-rule the views of a Local Government, over-rule the views of a Local Government, must ordinarity be referred to the Viceroys. Any matter originating in one department which also affects another must be referred to the latter, and in the event of the Departments not being able to agree, the case is re-

THE INDIA OFFICE,
o structural the United Kingdom, and with the assistance of Indian students in England. Concurrently with this change, it became possible to defray from British revenues the salaries of the Secretary of State and of the Parliamentary Under-Secretary, and that portion of the cost of salaries of India Office staff and general maintenance which is attributable to the exercise of its administrative as distinct from purely agency functions.

In due course the apportionment to British estimates will be the cost of the India Office as it exists after the transfer of functions to the High Commissioner has been completely effected; then the salaries of the High Commissioner and his staff will be the only expenses in the United Kingdom chargeable to Indian revenues. Until that time arrives, however, an estimate was the only basis for settlement. For five years from 1920-21, the cost of the India Office payable from British revenues has been fixed at 136,500l., which includes the salaries of the Secretary of State and of the Parliamentary Under-Secretary, and a contribution of 40,0001., which has for some years been made by the Treasury towards Indian expenditure, as the result of the recommendations of the Welby Commission. This system still continues

ferred to the Viceroy. The Members of Council meet periodically as a Cabinet—ordinarily once or twice a week—to discuss questions which the Viceroy desires to put before them, or which a member who has been over-ruled by the Viceroy has asked to be referred to Council If there is a difference of opinion in the Council the decision of the majority ordinarily prevails, but the Viceroy can over-rule a majority if he considers that the matter is of such grave importance as to justify such a step. Each departmental office is in the subordinate charge mental office is in the supportunate charge of a Secretary, whose position corresponds very much to that of a permanent Under-Secretary of State in the United Kingdom; but with these differences—that the Secretary is present though does not speak, at Council meetings at which cases under his cognisance are discussed: that he attends on the Viceroy, usually once a week, and discusses with him usually once a week, and discusses with him all matters of importance arising in his Department; that he has the right of bringing to the Viceroy's special notice any case in which he considers that the Viceroy's concurrence should be obtained to action proposed by the Departmental Member of Council; and that his tenure of office is usually limited to three years The Secretaries have under them Deputy, Under and Assistant Secretaries, together with the ordinary clerical establishments. The Secretaries and Under-Secretaries are offen, though by no means Secretaries are often, though by no means exclusively, members of the Indian Civil Service. The Government of India has no Civil Service of its own as distinct from that of the Provincial Governments, and officers serving under the Government of India are borrowed from the Provinces, or in the case of Specialist recruited direct by contract.

THE DIVISION OF FUNCTIONS.

The keynote of the 1919 scheme is effective provincial autonomy and the establishment of an immediate measure of responsibility in the of Governors in Council. This demanded a sharp division between Imperial and Provincial functions. The following supports are provinces all of which are raised to the status reserved to the Government of India, with the corollary that all others vest in the Provincial Governments:-

- 1. (a) Defence of India, and all matters connected with His Majesty's Naval, Military, and Air Forces in India, or with His Majesty's Indian Marine Service or with any other force raised in India, other than military and armed police wholly maintained by local Governments.
 - (b) Naval and military works cantonments.
- 2. External relations, including naturalisa-tion and aliens, and pilgrimages beyond India.
 - 3. Relations with States in India.
 - 4. Political charges.
- 5. Communications to the extent described under the following heads, namely:-
- (a) raisway and extra-municipal tramways in so far as they are not classified as provincial subjects under entry 6 (d) of Part II of this Schedule:
- (b) aircraft and all matters connected therewith and
- (c) inland waterways, to an extent to be declared by rule made by the Governor-General in Council or by or under legislation by the Indian legislature,
- 6. Shipping and navigation, including shipping and navigation on inland waterways in so far as declared to be a central subject in accordance with entry 5 (c).
- 7. Light-houses (including their approaches) beacons, lightships and buoys.
 - 8. Port quarantine and marine hospitals.
- 9. Ports declared to be major ports by rule made by the Governor-General in Council or by or under legislation by the Indian legislature.
- 10. Posts, telegraph and telephones, including wireless installations.
- 11. Customs, cotton excise duties, incometax, sait, and other sources of all-India revenues.
 - 12. Currency and coinage.
 - 13. Public debt of India.
 - 14. Savings Banks.
- The Indian Audit Department and excluded Audit Departments, as defined in rules tramed under section 96-D (1) of the Act.
- 16. Civil law, including laws regarding status, property, civil rights and liabilities, and civil procedure. including laws regarding
- 17. Commerce, including banking insurance.
- Trading companies and other associations.

- 19. Control of production, supply distribution of any articles in respect of which control by a central authority is declared by tule made by the Governor-General in Council or by or under legislation by the Indian legislature to be essential in the public ınterest
- Development of industries, in cases where such development by a central authority is declared by order of the Governor-General in Council, niade after consultation with the local Government or local Governments concerned expedient in the public interest.
- 21. Control of cultivation and manufacture of opium, and sale of opium for export.
- 22. Stores and stationery, both imported and indigenous, required for Imperial Depart-
 - 23. Control of petroleum and explosives.
 - 24. Geological survey.
- 25. Control of mineral development, in so far as such control is reserved to the Governor-General in Council under rules made or sanctioned by the Secretary of State, and regulation of mines.
 - 26. Botanical Survey.
 - 27. Inventions and designs. 28. Copyright.
- 29. Emigration from, and immigration into British India, and inter-provincial migration.
- 30. Criminal law, including criminal procedure.
 - 31. Central police organisation.
 - 32. Control of arms and ammunition.
- 33. Central agencies and institutions research (including observatories), and for professional or technical training or promotion of special studies.
- 34. Ecclesiastical administration including European cemeteries.
 - 35. Survey of India.
 - 36. Archæology.
 - 37. Zoological Survey.
 - 38. Meteorology.
 - 39. Census and statistics.
 - 40. All-India services.
- 41. Legislation in regard to any provincial subject in so far as such subject is in Part II of this Schedule stated to be subject to legislation by the Indian legislature, and any powers relating to such subject reserved by legislation to the Governor-General in Council.
- 42. Territorial changes, other than interprovincial, and declaration of law in connection therewith.
- Regulation of ceremonial, titles, orders, precedence, and civil uniform.
- 44. Immovable property acquired by, and maintained at the cost of the Governor-General in Council.
 - 45. The Public Service Commission.

of Darbhanga.

The Bombay Presidency.

Consequent on the seperation of Sind from the Bombay Presidency as from April 1, 1936, vies with Broach as the best in India. There Bombay has suffered a dimuntion territorally are no great perennial rivers suitable for irriand otherwise. The following details relate to gation, and the harvest is largely dependent upon the seasonal rainfall, supplemented by

The Bombay Presidency now stretches along the west coast of India, from Gujerat in the North to Kanara in the South. It has an area of 77,221 square miles and a population of 18,192,475. Geographically included in the Presidency but under the Government of India is the first class Indian State of Baroda, with an area of 8,164 square miles and a population of 2,443,007. There are no States in political relations with the Government of Bombay, as they are all now under the Government of India.

The Presidency embraces a wide diversity of soil, climate and people. In the Presidency there are the rich plains of Gujarat, watered by the Nerbudda and the Tapti, whose fertility is so marked that it has iong been known as the Garden of India. South of Bombay City the province is divided into two sections by the Western Ghats, a range of hills running parallel to the coast. Above Ghats are the Deccan Districts, south of these come the Karnatic districts. On the sea side of the Ghats is the Konkan, a rice-growing tract, intercepted by creeks which make communication difficult.

The People.

The population varies as markedly as soil and climate. Gujarat has remained true to Hinduism athough long under the dominion of powerful Mahomedan kings. Here there is an amplitude of caste divisions, and a people, who although softened by prosperity, are amongst the keenest trading races in the world. The Deccan peasant has been seasoned by adversity; the saying goes that the Deccan expects a famine one year in every three, and gets it; the population is much more homogeneous than in Gujarat, and thirty per cent. are Mahrattas. The Karnatic is the land of the Lingayets, a Hindu reforming sect of the twelfth century, and in the Konkan there is a large proportion of Christians. Four main languages are spoken, Sindi, Gujarati, Marathi and Kanarese, with Urdu a rough lingua franca where English has not penetrated. The main-astes and tribes number five hundred.

Industries.

The principal industry is agriculture, which supports sixty-four per cent. of the population. In Gujarat the soils are of two classes, the black cotton soil, which yields the famous broach cottons, the finest in India, and alluvial, which under careful cultivation in Ahmedabad and Kaira makes splendid garden land. The dominant soil characteristic of the Deccan is black soil, which produces cotton, wheat, gram and millet, and in certain tracts rich crops of sugarcane. The Konkan is a rice land, grown under the abundant rains of the submontane

regions, and in the south the Dharwar cotton vies with Broach as the best in India. There are no great perennial rivers suitable for irrigation, and the harvest is largely dependent upon the seasonal rainfall, supplemented by well irrigation. A chain of irrigation works, consisting of canals fed from great reservoirs in the region of unfailing rainfall in the Ghats, is gradually being completed, and this will ultimately make the Deccan immune to serious drought. More than any other part of India the Presidency has been scourged by famine and plague. The evils have not been unmixed, for tribulation has made the people more self-reliant, and the rise in the values of all produce, synchronising with a certain development of industry, has induced a considerable rise in the standard of living. The land is held on what is known as the ryotwari tenure, that is to say, each cultivator holds his land direct from Government under a moderate assessment, and as long as he pays this assessment he cannot be disposeessed.

Manufactures.

Whilst agriculture is the principal industry, others have no inconsiderable place. The mineral wealth of the Presidency is small and is confined to building stone, salt extracted from the sea, and a little manganese. But the handlearsts are widely distributed. The handleom weavers produce bright-coloured saris, and to a diminishing extent the exquisite kincobs of Ahmedabad and Surat. Bombay silverware has a place of its own, as well as the brass work of Poona and Nasik But the tendency is to submerge the indigenous handlerafts beneath industry organised on modern lines. Bombay is the great centre in India of the textile trade. This is chiefly found in the headquarter city, Bombay.

Number of Looms in Bombay Island. Number of Spindles in Bombay Island, 31,69,700 Number of hands employed in the Textile Industry in Bombay Island. 95 007 (daily average.) Administration.

The Presidency is administered by a Governor and an Executive Council of two members, with the assistance of two Ministers. The exact change made in the functions of the Provincial Governments is indicated in the section on the Provincial Governments (q. v.) where a description is given of the division of the administration into two branches, the Reserved Subjects, administered by the Governor and his Council and the Transferred Sublects, administered by the Governor and his Ministers, the whole Government commonly Ministers, the whole government common, meeting and acting as one. In another part of that section the division between Reserved and Transferred subjects is shown. This new and Transferred subjects is shown. This new form of administration under the Reform Act of 1919 came into operation in January 1921 All papers relating to public service business reach Government through the Secretariat, divided into seven main departments, each under a Secretary (a) Finance; (b) Revenue; (c) Home and Ecclesiastical (d) Political and reforms; (c) General and Educational; (f) Legal; (g) Public Works.
The senior of the Civilian Secretaries is entitled the Chief Secretary. The Government is in Bombay from November to the end of May; and in Poona from June to November; but the Secretariat is always in Bombay. Under the Governor-in-Council the Presidency is der the Governor-in-Council the Fresidency is administered by three Commissioners, namely, the Commissioner for the Northern Division, with headquarters at Ahmedabad, the Central Division at Poona, and the Southern Division at Belgaum. Each district is under a Collector, usually a Covenanted Civilian whe angle bless over Civilian Civilian with the students. lian, who has under him one or more Civilians as Assistant Collectors, and one or more Deputy Collectors. A collectorate contains on an average from eight to ten talukas, each consisting of from one to two hundred villages whose whole revenues belong to the State. The village officers are the patel, who is the head of the village both for revenue and police purpose; the talati or kulkarni, clerk and accountant; the messenger and the watchman.
Over each Taluka or group of villages is the
mamlatdar, who is also a subordinate magistrate. The charge of the Assistant or Deputy Collector contains three or four talukas. The Collector and Magistrate is over the whole District. The Commissioners exercise general control over the Districts in their Divisions

Justice.

The administration of justice is entrusted to the High Court sitting in Bombay, and comprising a Chief Justice, who is a barsister, and nine puisne judges, either Civilians, Barristers, or Indian lawyers. Of the lower civil courts the court of the first instance is that of the Subordinate Judge recruited from the ranks of the local lawyers. The Court of first appeal is that of the District or Assistant Judge, or of a first class subordinate judge with special powers. District and Assistant Judges are Indian Civilians, or members of the Provincial Service or the Bar. In cases exceeding Rs. 5,000 in value an appeal from the decision of the Subordinate or Assistant Judge and from the decision of the District Judge in

ali original suits lies to the High Court. District and Assistant Judges exercise criminal jurisdiction throughout the Presidency but original criminal work is chiefly disposed of by the Executive District Officers and Resident and City Magistrates. Capital sentences are subject to confirmation by the High Court. In some of the principal cities Special Magistrates exercise summary jurisdiction (Romhay has six Presidency Magistrates, as well as Honorary Magistrates exercising the functions of English Justices of the Peace) and a Court of Small Causes, corresponding to the English County Courts.

Local Government.

Local control over certain branches of the administration is secured by the constitution of local boards and municipalities, the former exercising authority over a District or a Taluka, and the latter over a city or town. These bodies are composed of members either nominated by Government or elected by the people, who are empowered to expend the funds at their disposal on education, sanitation, the construction of roads and tanks, and general improvements. Their funds are derived from cesses on the land revenue, the toll, ferry funds and local taxes. The tendency of recent years has been to increase the elective and reduce the nominated element, to allow these bodies to elect their own chairmen, whilst larger grants have been made from the general revenues for water supply and drainage.

The Bombay Municipal Boroughs Act of 1925 works further advance the matter of local Self-Government in the Presidency. The Act provides more adequate basis for Municipal Administration in the larger cities of the Bombay Presidency. The larger municipalities are now styled as Municipal Boroughs which are now 30 in number. The executives of these Borough Municipalities are invested with larger powers than hitherto exercised. Another important change introduced by the Act was the extension of municipal franchise to occupiers of dwellings or buildings with annual rental values of Rs. 12 or with capital value of not less than Rs. 200.

Public Works.

The Public Works Department is under the control of a Chief Engineer who acts as Secretary to the Government. Under him are Superintending Engineers in charge of Circles and Executive Engineers in charge of divisions, and the Electrical Engineer.

There is a chain of protective irrigation works, originating in reservoirs in the Ghat regions. The principal works are the Nira Canals fed by Lake Whiting impounded by the Lloyd Dam at Bhatgar, the Pravara Canals fed by Lake Arthur Hill, impounded by Wilson Dam at Bhandardara, the Mutha Canals fed by Lake Fife at Khadakvasla, the Godavari Canals fed by Lake Beale at Nandur Madhmeshwar and the Gokak Canal. The Mutha Canals and the Gokak Canal were completed in 1896-97, the Nira Left Bank Canal in 1905-06, the Godavari Canals in 1915-16 and the Pravara Canals in 1920-27. The Nira Right Bank Canal

which has been under construction since 1912 is practically completed. The Wilson Dam at Bhandardara, the second highest yet constructed by Engineers the world over, was opened by His Excellency the Governor on 10th December 1926. The Llovd Dam at Bhatgar which is 5,333 feet in length, 190 feet in height and 124 feet in width was opened by H. E Sir Leslie Wilson on 27th October 1928. It cost Rs. 172 lakhs it is remarkable as being the largest Dam in volume hitherto constructed and contains 214 million cubic feet of masonry. The Assuan Dam in Egypt is popularly supposed to be the largest Dam in existence but that contains 19 million cubic feet. It cost also nearly 50 per cent, more than the Lloyd Dam. An idea of the magnitude of the Lloyd Dam can be gathered from the fact that if a wall 6 feet high and 15 inches thick were constructed from the masonry in the Dam it would stretch a distance of 520 miles, say from Bombay to Nagpur. These projects will irrigate certain tracts most liable to familie.

Police.

The Police Force is divided into 3 categories, viz, District Police, Railway Police and the Bombay City Police. The District and Railway Police in the Presidency proper are for the purpose of control under the Inspector-General of Police who is assisted by three Deputy Inspectors-General, of whom two are in charge of Ranges and the third is in charge of the Criminal Investigation Department and the Finger Print Bureau The executive management of the Police in each district and Railways in the Presidency proper as well as in Sind is vested in a Superintendent of Police under the general direction of the Magistrate of the District concerned except in the case of the Railway Police. For the purposes of effective supervision over the investigation and prevention of crime, some of the larger districts are divided into one or more sub-divisions each under a Sub-Divisional Officer who is either an Assistant Superintendent of Police, or an Inspector of Police, a Deputy Superintendent of Police, Sub-Inspectors are the officers in charge of Police Stations and are primarily responsible rounce stations and are primarily responsible under the law, for the investigation of offences reported at their Police Stations Officers appointed directly to the posts of Assistant Superintendents of Police, Deputy Superintendents of Police, Inspectors and Sub-Inspectors undergo a course of training at the Central Police Training School at Nasik before being posted to Districts for executive duty. The Bombay City Police is a separate force under the Commissioner of Police who is directly responsible to Government.

Education.

Education is imparted partly through direct Government agency, and partly through the medium of grants-in-aid Government maintam Arts Colleges at Bombay, Andheri, Ahmedabad and Dharwar; the Grant Medical College, the Poons College of Engineering, the Agricultural College, Veterinary College, School of Art, Iaw College and a College of Commerce. Most of the secondary schools are in private hands, The primary schools are maintained by Local Authorities, with a grant-m-aid, tamed by Local Authorities, with a grant-m-aid.

The Bombay Municipality is responsible for primary education in Bombay City (q. v., Education).

The Quinquennial Report on Public Instruction in the Bombay Presidency for the years 1927-1932 reveals much information regarding the progress of education in recent years. The passing in 1923 of the Primary Education Act was perhaps the most important event in the history of Primary Education in the Bombay Presidency during the last 30 or 40 years whereby the control of Primary Education was transferred from the Department to the Local Authorities. Most of the Boards have prepared schemes for the expansion of education, some of them on a compulsory basis, and many boards have levied additional taxation but the finances of Government have not permitted them to perform to the full the part contemplated by the Act. The fact, however, must not be lost sight of that during the quinquenium the assignments of Government to Primary Education tell from Rs. 1,21,59,848 to Rs. 1,18,17,308. The decrease was mainly due to retrenchment in Government grants during 1931-32

The total number of Institutions increased during the quinquenium from 16,211 to 17,159. Recognised institutions increased by 1,145 to 15,929 while unrecognised institutions decreased by 107 to 1,230 — 01 the recognised institutions 18 are 4.15 and 11 Professional Colleges and 714 Secondary Schools, 14,616 Primary Schools and 314 Special Schools.

The total number of recognised and unrecognised educational institutions during the year 1933-34 was 16,730 and the number of pupils 1,374,296

Out of a total of 26,859 fowns and villages 10,659 possessed schools, the average area served by each town or village with a school being 11.6 square index. The percentage of pupils in recognised institutions to the total population of the Presidency was 6,11 in 1933-34. Of the total number of 1,332,524 pupils under instruction, 1,025,928 were boys and 306,5% were guls

Hindu pupils in recognised institutions numbered 997,886, Muhammadans 235,548, Indian Christians 39,341, Parsis 18,266, Europeans and Anglo-Indians 5,540. The rest comprised 35,943.

The total expenditure on education in 1933-3 was Rs 398% lakhs, of which 44.2 per cent was met from Government funds, 19.4 per cent from Board funds, 23.2 per cent from fees, and 13.2 per cent from other sources. Primary schools absorbed over Rs 205 lakhs, exclusive of expenditure on inspection, construction, and repairs.

The Educational Department is administered by a Director, with an Inspector in each Division and a Deputy or Assistant Inspector in each district.

Higher education in the Presidency is controlled by the Bombay University which was established in 1857. The constitution of the University has recently undergone, however,

considerable changes in virtue of a new enactment known as the Bombay University Act of 1928. This Act altered the whole constitution of the University so as to make it adequately representative with a view to bringing into closer association with the public the industrial commercial and civic life of the people of the Presidency to enable it to provide greater facilities for higher education in all branches of learning including Technology and to undertake on a larger scale than heretofore post-graduate teaching and research, while continuing to exercise due control over the teaching given by solleges affiliated to it from time to time. The new University Department of Chemical Technology was formally inaugurated by His Excellency the Governor of Bombay on 15th November 1933. The authorities of the University, as now constituted, are chiefly the Chancellor, Vice-Chancellor, the Syndicate, the Academic Council and the Senate. The Senate consisting of fellows is the supreme governing body of the University. The number of fellows is 144 of whom 40 are nominated by the Chancellor and 11 are ex-officio. The Academic Council consisting of educational experts deals with all purely academical questions. This body works in collaboration with the Syndicate which is the principal executive of the University.

Medical.

The Medical Department is in the charge of the Surgeon-General who is a member of the I.M. S., and Public Health in that of the Director of Public Health, who is usually a non I.M.S. Officer. Civil Surgeon stationed at each district headquarters are responsible for the medical work of the district: whilst sanitation is entrusted to one of the Assistant Directors of Public Health. Four large hospitals are maintained by the Government in Bombay, and the accommodation in them has been recently increased by 300 beds in one hospital and 180 beds in another hospital. A number of beds in the Bombay City had to be closed during 1931-32 owing to shortage of funds. Well-equipped hospitals exist in all important up-country stations.

Over 3,210,318 persons including 1,12,710 inpatients were treated during the year 1933. The Presidency contains & Lunatic Asylums and 16 institutions for the treatment of Lepers. Vaccination is extrict out by a staff under the direction of the Director of Public Health. Sanitary work has received an immense stimulus from the large grants made by the Government from time to time.

Finance.

Under the Reform Scheme of 1919 Provincial Finance entered on a new phase. Before the passing of this Act Provincial finance was incorporated in Imperial Finance. The Provinces had certain heads of revenue of their own and other heads which they divided with the Government of India. By the new constitution a comparatively clean cut was made between the finances of the Government of India and those of the Provinces. Such revenues as they enjoy the Provinces enjoy in full, and in return they make cash contributions to the Government of India, fixed for a term of years. The general principle underlying this settlement is that those contributions shall gradually disappear. These contributions have now been remitted.

As this chapter goes to press there has just been published the report of Si Otto Niemeyer on the financial relations between the Central and Provincial Governments of India under the Government of India Act of 1985 The report indicates no possibility of a reduction in the central expenditure or taxation unless the economic situation improves. He proposes that the centre should retain during the first five years of provincial autonomy the entire proceeds of the income tax, and during the second period of five years retain half and distribute the other half among the provinces. Of this distributable portion, Bombay is to get 20 per cent. Barring this postponed relief, Bombay will get no relief financially, except a saving of 45 laks as the result of the separation of Sind.

Estimated Revenue for 1936-37-(in lakhs of Rupees).

Sind.

Sand is one of the two provinces created in 1936, the other being Orissa Unlike the latter, which has been carved out on a linguistic basis from three older provinces, Sind was a compact unit and was considered a province within a province even before its separation From the point of view of geography, ethnology

The demand for its separation into a distinct political entity is of compiratively recent origin. It was only about a dozen years ago that Mushim leaders started the demand that Sind, where the Muslims are in an overwhelming majority, should have separate administrative machinery under the next reformed constitution so that it might be a counterblast to provinces where the Hindus are in a negocity. What was started as a bargaining point in inter-communal negotiations has now become an accomplished tact.

The Muslim delegation at the first Round Table Conterence put forward the demand in London in the winter of 1930. The question was referred to a committee which accepted the principle of separation, suggested an expert inquity to ascertain the financial aspect of the separation, and threw the burden of proving the teasibility of separation on those who asked tor it. An expert inquiry was held and it drew a gloomy picture of the financial intuitie of Sind. Its findings can best be summarised by its remark, "There is thus obviously no question of Sind standing strety. for the Barrage -the problem is whether the Burage can stand surety for Sind '

Demand for Separation.

A conference of representatives of the people of Sind met in 1932 to devise measures to meet the fluencial objections to the separation divergence of opinion prevailed at this conference, whose churman eventually submitted a report according to which the annual deficit of the new province for the first six years of its lite would be Rs 80 lakhs, the revenue from the Barrage being eaten up by interest charges Roughly from 1945 onwards, there would nongny from 1945 onwards, there would be a surplus from the Birrage to help the province Based on this assumption the authorities set about perfecting the administrative machinery in preparation for the managaration of the new regime.

With the stage set for the advent of the new province, an Order-m-Council was issued in January, 1936, announcing that the new province

Of a permanent character are those provisions of the Order-in-Council which sever Sind from Bombay and settle the habilities of the parent and the infant in respect of development loans incurred during the joint family period Lands, iorests, buildings, property, etc., will pass to the province where they are situated. Arrears of From the point of view of geography, ethnows, and language. Sind has greater affinity to the taxes will belong to the province where the bases and language. Sind has greater affinity to the property is situate or the taxed transactions been attached to the Bombay Presidency took place Of the outstanding Bombay administratively ever since its conquest by firingation Debt incurred before April 1, 1921, Rs 2,74,96,384, including Rs 73,687 of the second of the Lloyd Barrage and Canals debt on account of the Lloyd Barrage and Canals system, will be borne by Sind, and the rest by Bombay Of the debt incurred on account of the Lloyd Barrage and Canals system, all except the portion relating to the Nasirabad section (which is chargeable neither to Bombay not to Smd) will be borne by Smd The outstanding Bombay debt on account of the Bombay Development Scheme will be the debt of Bombay Other loan works will be chargeable to the province where the works are located

The temporary provisions of the Order-in Council relate to the period between April 1. 1936, and the mangination of provincial auto-During this period the Governor will carry on the administration, assisted by two Advisers and a Council which will be purely advisory in character and will comprise members nominated by the Governor Such provisions of the Government of India Act of 1919 as relate to the composition and functions of the provincial legislative councils, the separation of provincial subjects into transferred and reserved subjects, the Ministers and Executive Councillors will not apply to Sind during the transitional

It is also understood that the Central Government will have to come to the rescue of Sind by providing the funds to meet the deficit in the first few years. In order to make arrangements for such a subvention to Sund and Orissa and tor other weak provinces and generally to adjust the financial relations between the Central and the provinces under the provincial autonomy scheme, Sir Otto Niemeyer, a financial expert, was asked to conduct an inquiry. He has completed his investigations and submitted his report, according to which Sind will get a cash subvention of Rs 105 lakhs for a period of ten years, atter which the aid will be progressively decreased. While on the subject of help from the centre, it may be mentioned that, according to the Niemeyer recommendations, Sind will get after the first five years of provincial autonomy 2 per cent, of the distributable portion of the income-tax revenue.

Population.

would start our its career on April, 1, 1936, and a population of 3,887,000. Of this, the Hindus creating transitional machinery for the conduct of government till provincial autonomy is manufacted in accordance with the provisions of the Government of India Act, 1935. Sind has an area of 46,378 square miles and

The language of the province, Sindhi, though it bears many marks of Arabic and Persian influence and is written in a form of Perso-Arabic script, is nearer the original Sanskiit than any other Indian language Few, however, are capable of writing it, for only 70 out of every 1,000 people in Sind are literate The average tor males is 106 per 1,000, that for females being as low as 21 per 1,000. The Hindus are tar more advanced than the Muslims and enjoy a virtual monopoly of the trade of the province against 263 Hindu literate males per 1,000, only 44 Mushims per 1 000 are literate, 51 per 1,000 literate Hindu females compare against five literate Muslim females. The number of those literate in English are 119 per 10,000- 186 per 10,000 males and 34 per 10,000 females

Out of every 100 workers in Sind 59 are engaged in agriculture and animal linsbandry per cent are engaged in manufacturing industries, most of which are, however, of the cottage type, there being very few factories in Snid

The cultivable area of the province is mostly commanded by the recently constructed Sukkin Barrage and Sind canals, which, with other canals and the Indus river itself supply water to 7,500,000 acres. The Barrage works have cost nearly 24 crotes of rupees The Sindhi agricultinist is gradually becoming alive to the perennial regulated supply of irrigation and his outlook is becoming brighter. The rapidity with which lands supplied by the Barrage system are being taken up augurs well tor the success of the scheme and the prosperity of the province as a whole Already there has been a growth in the production of long staple cotton all of which is easily absorbed by Indian textile

Lloyd Barrage

The Barrage owes its existence largely to the zal of Sir George (Now Lord) Lloyd, the then Governor of Bombay, whose name it bears Started in July 1923, it was completed in January 1932 It was the completion of the dream of many an engineer and an almost incledible boon to the cultivator, who formerly carried on his agricultural operations in a hephazaid manner, being unable to depend on the proverbial vagaries of the Indus What it means to the Smdhi the Sindhi alone knows, for the Barrage has converted- or hopes to convert-a waterless desert into a smiling garden flowing with milk and honey

The magnificence of the achievement that is the Lloyd Barrage can be imagined when it is realised that it is a hige water regulator consisting of 66 spans, each sixty feet wide, the weighing fitty tons. The Barrage is about a mile long, about five times the length of London Budge Thousands of miles of new channels were excavated varying in width from 346 feet in the case of main canals to only two or three teet in the case of water courses length of Government channels which were (Neavated was over 6,000 miles, and that of water courses over 31,000 miles. The total lengths is thus some 37,000 miles, which means a reference to its capital, Karachi It is a

The total quantity of earthwork involved, excluding that for the watercourses was 560 croies cubic feet of earthwork which means a solid column measuring 100 feet by 100 feet extending to a height of over 550 miles

The function of the Barrage is to lead up the river and store the water at Sirkkur and from that to distribute it all the year round according to requirements of cultivators requirements of cultivators. The distribution is made through seven great canals, regulated through regulators on both banks of the rivertonr on the left bank, three on the right Those on the left bank are Rohm, the Eastern Nama, the Khanpur Feeder East and the Khanpur Feeder West. Those on the right bank are the Perennul, the Central Rice and the South-Eastern Perennul or Dadu.

The total amuber of openings in all the canal Head Regulators is 55 each being of 25 feet span and each opening being equipped with three electrically operated gates electrically operated gates. The total discharge of water into all the canals is approximately 45,750 cusees or 457,500 gallons per second. The total length of the main and branch canals is about 4,700 miles To accomplish this staggering test, excavation of earthwork to the extent of 8,000,000,000 cubic feet was involved, as much as would fill a drain 15 feet wide and four feet deep, dng round the equator It was estimated that the ultimate area of annual cultivation on the scheme would be over 5,000,000 areas and this would be under various crops approximately as follows

Wheat 2,440,000 acres , cotton 790,000 acres , ince 625,000 acres , jawari, bajri, etc., 695,000 ares, pulses 53,000 acreas, and oilseeds 410,000

This denoted in produce would mean the tollowing approximate quantities

Wheat 1,133,000 tons, cotton 592,500 bales. tice 447,000 tons; januri, bajri, etc., 298,000 tons, pulses 15,000 tons, and oilseeds 117,000 tons.

Inter-communal Co-operation.

Politically, the province is backward the Hindu minority is politically minded, the Mushins owning allegiance to personalities rather than to principles. The Hindus are openly afraid of Mishin dominance and of being onsted from public life They have already communicated this fear to the new Governor, Sir Lancelot Graham who has assured them of his sympathy and determination to sateguard their legitimate interests. On the other hand, there is growing evidence of a desire on the part of the Mushin community to reassure the minority in regard openings being regulated by steel gates, each to the continued enjoyment of its rights. Leaders of both communities are working for the creation of an understanding between the two which will bring about an era of inter-communal co-operation and goodwill so necessary for the successful working of the reformed constitution The total under untavourable financial conditions

Karachi.

No account of Smd will be complete without about 1] times the encumference of the earth. comparatively new town, for according to known facts it was as recently as 1729 that a few traders) of the neighbouring State of Kalat migrated to the "Kalachi" the land of the sand-dunes It was several years later that its potentialities as a harbour were realised by the British—Sir Charles Napler, the Conqueror of Sind, is said to have forecast that Karachi would some day become the "Glory of the East" Recent developments in Karachi hold out fiesh hopes of this prediction being fulfilled, for with the growth of aviation, Karachi, which is on the main line of imperial aerial communication between London and Australia right across India, is bound to become a vital airport, if it is not already one—in addition to being the capital of Sind, Karachi is the outlet for the products of the Punjab—if the Barrage becomes all that is expected of it, Karachi may have to handle in 1960 nearly 1,133,000 tons of wheat 500.000 bales of cotton, 447,000 tons of rice, 298,000 tons of jowar, bajri, etc 15,000 tons of pulses and 117,000 tons of oilseeds. That this is not altogether Utopian is evident from the fact that within four years of the commencement of Barrage operations, that is, by the end of 1935. the following areas were under cultivation in Sind 850,000 acres under wheat, 500,000 acres under cotton and 50,000 acres under rice

GOVERNOR

His Excellency SIR LANCELOT GRAHAM, K C S I , K C, I E , I C S

To assist the Governor "in such manner as may be prescribed by him in that behalf "-Sir Shah Nawaz Khan Ghulam Murtaza Khan Bhutto, Kt , CIE, OBE, and Diwan Bahadur Hiranand Khemsing.

The Madras Presidency.

The Madras Presidency occupies the whole southern portion of the Peninsula, and, excluding the Indian States, all of which have now come under the direct control of the Government of India, has an area of 142,260 square miles. It has on the east, on the Bay of Bengal, a coast line of about 1,250 miles; on the South on the Arabian Sea, a coast line of about 450 miles. In all this extent of coast, however, there is not a single natural harbour of any importance; the ports, with the exception of Madras, and perhaps of Cochin, are merely open roadsteads. A plateau, varying in height above sea-level from about 1,000 to about \$0.000 feet and stretching northwards from the Nilgiri Hills, occupies the central area of the Presidency; on either side are the Eastern and the Western Ghats, which meet in the Nilgiris. The height of the western mountain-chain has an important effect on the rainfall. Where the chain is high, the intercepted rain-clouds give a heavy fall, which may amount to 150 inches on the seaward side, but comparations of the seaward side and side sides of the seaward side. tively little rain falls on the landward side of the range. Where the chain is low, rainclouds are not checked in their westward course. In the central table land on the east coast the rainfall is small and the heat in summer excessive. The rivers, which flow from west to east, in their earlier course drain rather west to east, in their earner course drain father than Irrigate the country; but the deltas of the Godavari, Kistna and Cauvery are productive of fair crops even in time of drought and are the only portions of the east coast where agriculture is not dependent on a rainfall rarely exceeding 40 inches and apt to be untimely.

Population.

The population of the Presidency was returned at the census of 1931 as 47,193,602, an increase of 10.4 per cent. over the figure of 1921. The increase was not uniform. The districts which had suffered most in 1921 tended to show large increases in 1931—Bellary and Agencies were marked illustrations. As a natural corollary to an increase in population the Presidency density has risen. Hindus account for 88 per cent of the Madras population, Muhammadans 7 per cent and Christians 3 8 per cent. The actual number in other communities is inconsiderable. The vast majority of the population is of the Dravidian race and the principal Dravidian languages, Tamil and Telugu are spoken by 19 and 18 million persons respectively. 40 per cent. of the population talk Tamil, 374 per cent. Telugu, 7.9 per cent. Malayalam, Oriya, Kanarese, Hindustani, Tulu follow in that order with percentages above 1.

Government.

The Madras Presidency is governed on the in 1932-33 and Rs 70,04 'ystem generally similar to that obtaining in Bombay and Bengal. There are associated with the Governor four members of the Executive Council in charge of the Reserved Sub-

jects and three Ministers in charge of the Transforred Subjects. Madras administration differs, however, in some important respects from that of other major provinces. There is no intermediate local authority between the Collector of the District and the authorities at headquarters, Commissioners of Divisions being inknown in Madras. Another feature peculiar to the Southern Presidency is the manner of choice of the Mother of Parliaments, Madras Governors have, ever since the inception of the Reforms, called upon the leader of the dominant party to form a ministry, giving him freedom to select his colleagues on the ministry. Consequently he enjoys the status of Chief Minister—unknown in other provinces in India.

Agriculture and Industries.

The principal occupation of the province is agriculture engaging about 68 per cent. of the population. The principal food crops are rice, cholam, ragi and kambu. The Industrial crops are cotton, sugarcane and groundnuts. The agricultural education is rapidly progressing in the Presidency. The activities of the Agricultural Department in matters educational consist in the running of a college at Computers. in the running of a college at Coimbatore affiliated to the University of Madras, three farm labourers' schools numerous demonstration farms. As it was found that the present course of middle school education does not satisfy the needs of the ryots, the only school maintained by the department at Taliperemba was closed with effect from 1st April 1932. The institution of short practical courses in farm management and allied subjects in the Agricultural College at Coimbatore have been sanctioned. While paddy which is the staple food of the population, occupies the largest cultivable area, cotton and sugarcane are by no means inconsiderable crops of the province and are receiving close attention at the hands of the local agricultural authorities. The area under cotton irrigated and unirrigated is actimated at 2,138,380 acres and, as in the case of paddy, efforts are being made to produce better strains of cotton suited to different localities by means of both selection and hybridization. Side by side with an increase in the area under cotton, from existing good staple areas, improved varieties have been systemaareas, improved varieties have been systematically introduced. A special feature of the agricultural activities in the Presidency is the large industry which the planting community have built up, contributing substantially to the economic development of the province. They have organised themselves as a registered body under the title of "The United Planters' Association of South India," on which are represented coffee, tea, rubber and a few other minor planting prorubber and a few other minor planting products. The aggregate value of seaborne trade of the Presidency which was Rs. 720,018,195 in 1932-33 and Rs 70,04,81,842 in 1933-34 rore to Rs. 76,98,36,552 in 34-35 As in other provinces, the forest resources are exploited by Government. There are close upon 19,000 square

Thirty-two spinning and weaving nills were at work during the year and they employed 44,130 operatives. The number of jute nills at work was three. At the close of the year 1933 the number of the other factories in the Presidency was 1,521. These consisted of oil mills, rope works, tie works, etc. Tanning is one of rope works, the works, etc. Tanning is one of the principal industries of the Presidency and there is considerable export trade in skins and; The manufacturing activities which are under the direction of the Department of Industries are mainly confined to the production of soap There are a number of indigenous match factories run on cottage lines. It is expected that the levy of the excise duty on matches will drive off the market products of interior quality and it is probable that only the very efficient units of the cottage industry will be able to continue the manufacture of matches once the tall force of the excise dity is felt upon the industry. It is slowly becoming recognised that the Madias Presidency is one of the most sintable parts of India for sugarcane, cultivation and that the several deep-rooted varieties of cane which have been evolved at Combatore and require very little water are especially suited for the conditions which obtain in several areas of the Presidency where they grow, better than in the north. The departments of Industres and Agriculture assist the development of the sugar industry by demonstration of the methods of manufacture or white sugar by centritugals by getting trained sugar technologists, by the award of scholarships and by investigating schemes for starting sugar factories

The question of finding foreign markets for the products of Madras cottage industries was under the consideration of the Government for sometime and they have passed orders during the year sanctioning an annual subsidy of Rs 3,000 to the Victoria Technical Institute, Madras, for three years to enable them to appoint an agent in London for the sale of products of Madras cottage industries in European markets

Education.

The Presidency's record in the sphere of education has been one of continuous progress There are at present about 51,000 public institutions, ranging from village primary schools to arts and professional colleges, their total Council passed a resolution in the year 1929 at the instance of a nominated member that poor girls reading in any educational institution in the province—Government, local find, Municipal or aided—should be exempted from School fees in any Standard up to III Form. The total expenditure of the province on Education is in the neighbourhood of Rs. 541 lakhs. The principal educational institutions in the province

| Itajahmundry; the Agricultural College | Combatore; the Medical Colleges at Madras and Vizagapatam and the Engineering College at Madras (Guindy).

Cochin Harbour Scheme.

The importance of this project lies in the fact that a good harbour at Cochin would lead to the development of a valuable hinterland and provide a ready outlet for agricultural and other provide a ready other for agricultural and other produce from an area which is at present not adequately served by a convenient or well equipped harbour. The scheme involves cutting a passage through the bar which hitherto blocked the entrance from the sea to an extensive backwater and by dredging and reclamation, forming a sheltered harbour accessible and giving full protection and factllties at all seasons of the year An agreement was reached in 1925 between the Government of Madras and the Darbars of Travancore and Cochin States indicating how the work is to be carried out and outlining the financial arrangements necessary. A trial cut was made in 1923 and the effects of the monsoon thereon were observed. The results recorded were examined by a Committee of Harbour Engineers in England who reported favourably on the prospects of the scheme

The first cut through the bar 400 feet wide by 321 feet deep was completed on 30th March 1928 The channel through the outer bar is now 3 miles long by 450 feet wide and during 1934-35 a minimum depth of 30 feet at L. W. O S T, was maintained throughout except for a small patch which had a depth of 291 feet the diedging of the Mooring area has been completed. Since March 1930 the Harbour has been in constant and regular use by all ships and a regular passenger service has been inangurated.

Proposals have been formulated for the next stage of the works which include the construction of deep water jetties with railway connections, construction of godowns and transit sheds, the installation of rapid handling cranes and other transport tacilities. These improvements are to be made on the new reclamation of which about 300 acres have been formed already by dredging from the harbour. It is intended to connect this to the mainland by a to arts and professional colleges, their total latiway bridge across the backwater. Reclama-strength being about 3,055,009. Special efforts toon, when completed, will provide sufficient are being made to provide education for boys space for about 20 or 30 large vessels to load or belonging to the Depressed Classes. The unload at the same time. The execution of the truther work at the port has been held over pending settlement of certain questions connected with the harboni administration. The matter was discussed at a Conference held in November 1935 and the question of giving effect to the conclusions arrived at the conference is under consideration. The Shoranor Ernakulam line has been converted from metre to broad-gauge principal educational institutions in the province and opened for traffic. The line is to be are the Madras, Andhra and Annamalai Uni-extended to the whirves at the reclamation, versities, the Presidency College, the Christian. These developments will enhance the utility College, the Law College, and the Queen in that put of the port to the planting and agricultural areas College, the Law College, and the Queen in that put of the Presidency. To facilitate maying a to the port of the planting and agricultural areas to be understood to the planting and agricultural areas to the college, the Law College, and the Queen in that put of the Presidency. To facilitate maying and a lotel has been constructed to provide there accommodation for passengers the Government College, the College, the College, and the Government College, the College, and the Government College, the College, and the Government College, the College, the College, and the Government College, the College, and the Government College, the College, the College for Women Madras; the St. of the planting and agricultural areas to the planting and agricultural areas to the college, the College for Women Madras; the St. of the planting and agricultural areas to the province and the planting agricultural areas to the province and the planting agricultural areas to the province and the planting agricultural areas to the planting agricultural areas t and opened for traffic. The line is to be

Local Self-Government.

Local bodies in the Madras Presidency are administered under the following Acts.—

The Madras City Municipal Act, 1919,

The Madras District Municipalities Act, 1920, as amended by Madras Act X of 1930, and

The Madras Local Boards Act, 1920, as amended by the Madras Act XI of 1930.

The amending Acts of 1930, which came into force on the 26th August 1930, provide, inter alia, for the abolition of the system of nominations to local bodies, for the inclusion of village panchayats within the scope of the Madras Local Boards Act with a view to making the village the unit of local self-government, for direct elections to district boards, for the creation of a municipal and local boards service for the Presidency of Madras, for the removal of the disqualification of women as such in respect of elections to municipal councils and for the cossation of office of the President or Chairman on a motion of non-confidence being passed against him by a prescribed majority. The Acts have undergone subsequent amendments Taluk Boards have been abolished with effect nom the 1st April 1934

In the interests of administration, commissioners have been appointed to almost all the Municipalities in the presidency and these have i placed non-official charmen as executive authorities.

Under an Amending Act of 1944, the tabuk boards were aboushed with effect from 1st April 1934. This step was undertaken as these bodies became financially embariassed. Then finite for have been entrusted to district boards, with a view to avoid extreme centralisation of administration of district boards, it has been decided to bitineate them. Up to the end of 1935, the number of district boards bituricated was four

Local bodies are now enabled under the Madras Local Authorities Entertainments Tax Act, 1926, to levy a tax on entertainments given within their jurisdiction.

Irrigation.

In March 1925, the Secretary of State sanctioned the Cauvery Reservoir Project, the estimated cost of which amounted to about £4½ millions. The project has been framed with two main objects in view. The first is to improve the existing fluctuating water supplies for the Cauvery Delta irrigation of over a million acres, the second is to extend irrigation to a new area of 301,000 acres, which will, it is estimated, add 150,000 tons of rice to the food supply of the country. The scheme which was completed in 1934 provides for a large dam at Metur on the Cauvery to store 93,500 million cubic fect of water and load a canal nearly 88 milles long with a connected distributary system. Owing to the necessity for providing aid quate surplus arrangements to dispose of floods similar to the phenomenal floods or 1924 and to other causes the estimate had to be revised and the revised estimate thands at about £5½ millions. A saving of nearly 44 millions,

ant project is the Perlyar project which is intended not only for irrigation purposes but also for providing water power for generating elec-tricity. Taking its rise in the Western Ghats, the river flows into the Arabian Sea through Travancore State territory, After prolonged negotiations, the Travancore Durbar consented to the water being caught and stored in the Travancore hills for being diverted towards the East, Some three thousand feet above sea-level a concrete and masonry dam has been constructed and nearly 50 feet below the crestlevel of the dam a channel through the summit of the range carries the waters into the eastern water-shed where they are led into the river Vaigai. The total quantity of water impounded to crest level is 15,660 million cubic feet. By this work, a river ordained by Nature to flow into the Arabian Sea has been led across the Pennsula into the Bay of Bengal irrigating on its way well over 100,000 acres of land. The irrigable area commanded by the Periyar system is 143,000 acres, while the supply from the lake was sufficient only for 130,000 acres To make up for this deficit, a scheme to increasing the effective capacity of the lake by lowering the water-shed cutting is in progress. The area already under irrigation in the Madras Presidency total about 7.5 milhon acres. Of this over 3 million acres are served by petty irrigation works numbering about 36,000.

Electric Schemes.

The first stage of the Pykaia Hydro-Electric project which was under construction by the Government of Madias has now been completed and is in operation from 1st April 1933. It consists in utilising a tall of over 3,000 ft. in the Pykara river as it descends the Nilgins Plateau tor the generation of electrical energy and its transmission for supply to the neighbouring distilcts, riz, the Aligiris and Coimbatore, and parts of Malabar, Salem Trichmopoly and Tanjore The Glen Morgan scheme started in 1928 with the object of supplying power to the main construction works of the Pykara project has now been merged with it in its present completed form the project consists of the main power house at Singara with an installed plant capacity of 33,000 B H P. an instance pant (aparty of 33,000 BHP, and the transformer station, the receiving station at Combatote, 10 other sub-stations, 189 miles of 66 kV line, 173 miles of 22 K.V. line and 135 miles of 11 kV line The booked cost up to 31st March 1935 is Rs 1,30,15 082 and the revised estimates for 1934-35 include an expenditure of Rs 5,22,000. The revenue realised during 1934-35 is about Rs 10 38 lakhs against an estimated revenue of Rs. 4,70,000.

Co-operation.

was completed in 1934 provides for a large dam at Metur on the Cauvery to store 93,500 million cubic feet of water and for a canal nearly 88 miles long with a conscited distributary system. Owing to the necessity for providing adequate surplus arrangements to dispose of floods similar to the phenomenal floods of 1924 and to other causes the estimate had to be revised and the revised estimate stands at about £ 5½ millions. A saving of necessity for the providing and the revised estimate had to be revised and the revised estimate to be revised and the revised estimate had to be revised estimate had to be revised and the revised estimate had the revised and the revised had to be revised and the revised and the revised had to be revised and the revised had to be revised and the revised had to

Rs. 26.36 lakhs and the Government have since relaxed the restrictions on the deposits of funds of local bodies. The policy of cautious registration of societies was continued. Only 100 tion of societies was confinied. Only 100 societies were registered during the year as against 140 in the previous year, while 28 Societies were liquidated. Under the scheme of subvention by the Provincial Bank for the rectification of Societies the non-official staff was able to reduce Societies the non-official staff was able to reduce overduos in 1,034 bad societies to below 40 per cent. Almost all the Central Banks have adopted the registrars scheme for the examination of individual loans in affiliated Societies with the result that, at the end of the year, additional securities were obtained in respect of loans amounting to Rs. 14.08 lakhs which were ill secured. The South India Co-operative were ill secured. The South India Co-operative Insurance Society started in March 1932 continued to do satisfactory work during the year The Central Land Mortgage Bank which was rate of interest, one Bank converted debentures of a total value of Rs. 10,83,200 and the benefit of the reduction in the rate was passed on to the ultimate borrowers in the primary banks. Funds are now made available to them at 6 per cent interest. The Government have guaranteed

of Central Banks were still further reduced to debentures issued by the Bank's stisfying certain conditions and debentures so guaranteed have become trustee securities according to an amendment of the Indian Trusts Act.

Law and Order.

The Superior Court for Civil and Criminal Judicial work in the Presidency is the High Court at Madras, which consists of a Chief Justice and thirteen pulsue judges. The existing law provides for a maximum of 20 High Court Judges. For the administration of criminal justice there are 29 Sessions Judges in the Mufassal, (including three for agency tracts) Additional and Assistant Sessions Judges being provided to assist Courts in which the work is heavy. Then there are the District Magistrates, the Subordinate Magistrates and Honorary Magistrates Insurance Society started in March 1932 continued to do satisfactory work during the year by 26 District Judges, and 41 Subordinate The Central Land Mortgage Bank which was Judges and 144 District Munsiffs. In the started in 1929 for the purpose of financing primary land mortgage Banks by floating consisting of one Judge and Small Causes debentures had another successful year it court consisting of a Chief Judge and two issued debendures to the extent of Rs. 28,72,800 other Judges. Madras is a litigious province and the records show one suit for every 74 with its policy of counting of high interest persons. The Police department is under an bearing debentures into ones carrying a lowel inspector-General who has six deputies, four in page of interest on Rank converted debentures. The administration of civil justice is carried on charge of ranges of the Presidency, one in charge of the Railway Police and the Criminal Investigation Department and one in charge of the Madras ultimate borrowers in the primary banks. Funds are now made available to them at 6 per cent interest. The Government have guaranteed both the principal of and the interest on the both the principal of and the interest on the Malabar Special Police.

The Bengal Presidency.

Presidency divisions and the district of Dargeling which were formerly administered by the Lieutenant-Governor of Bengal, and the Rajshahi, Dacca and Chittagong divisions which by the partition of the old Province had been placed under the administration of the Lieutenant-Governor of Eastern Bengal and Assum area of the Presidency is 82,955 square miles, and it possesses a population of 51,087,338 persons, included within this area are the two Indian States of Cooch Behar and Tippiin, which are now placed in direct political relations with the Government of Indra. The Governor of Bengal in Council acts as Agent to the Governor-General of Indra for these States. The area of the British territory is 77,521 square unles. The general range of the country however is very low, and a great fertile plain extends southward from Jalpaiguri to the forests and swamps known as the Sunderbans, which he between the area of cultivation and the Bay of Bengal.

The People.

Of thornhabitants of the Presidency 27,810,100 or 54 44 per cent, are Mahomedaus and 22,212,069 Hindus. These two major religious embrace all but 2 09 per cent of the population, Christians, Buddhists and Animists combined, number 1,043,049

Bougali is spoken by nucty-two per cent of the population of the Presidency and Hudi and Urdu by 3 7 per cent

Industries.

According to the returns of the census of 1931 10,593,384 persons or 20.7 per cent of the population derive their support from pasture and agriculture, and of these 6,041,495 are cultivators, and 2,718,939 are agricultural labourers The area under jute in 1933 is estimated at 2,168,700 acres against 1,845,700 in 1932 Bengal is the most important nee-producing area in Northern India, and it is computed that 87 per cent, of the cultivated area of the Piesidency is devoted to its production. Other crops include barley, wheat, pulses and oil-seeds Sugar is produced both from the sugar-cane and from the date-palm, and tobacco is grown for local consumption in nearly every district of Bengal The area under tea in 1933 was 209,688 acres There were 440 plantations employing a duly average of 184,762 permanent and 7,841 tem porary hands.

Manufacture and Trade.—Agriculture is the principal industry of Bengal In addition to this there are the jute null industry, the tea industry (confined to the districts of Jalpaigni) including the Dooars and Daijeeling), the coal mining industry and the sugar industry jute mills in and around Calcutta and in the tuparian tracts of the districts of Howish and Hooghly constitute the principal manufacturing industry of the Presidency

the year 1928-29) due to a rise in the piece of On its appellate side, the High Court disposes

The Presidency of Bengal, as constituted on traw jute, as a result of the policy of voluntary the 1st April 1912, comprises the Burdwan and restriction of jute crop, undertaken by the restriction of jute crop, undertaken by the Government of Bengal

> The trade of Bengal during 1934-35 showed an unprovement over the previous year ownig to the gradual lifting of the world-wide depression. The aggregate value of the total trade of the province (excluding treasure) with foreign countries and other Indian ports increased from Rs 1,11 58 croics in 1933-34 to Rs 1,19,20 croics m 1934-35 (priports of private incrchandise increased from Rs. 32.13 (1918) in 1933-34 to Rs 35 032 grores in 1934-35, which exports of private merchandise decreased from Rs 5846 crores in 1933-34 to Rs. 57 30 (101cs m 1934-35.

Administration.

The present form of administration in Bengal dates from January 1921. In 1912 the Government of the Province underwent an important change, when, in accordance with the Proclamation of His Majesty the King-Emperor at Delhi, the Province was raised from the status of a Lieutenant-Governor to that of a Governor-in-Council, thus bringing it into line with the Presidencies of Madras and Bombay In 1921, under the Reform Scheme, the Local Government was reconstituted, certain of the departments being placed under the control of Minuters appointed from among elected members of the Legislative Conneil. There are normally four urembers of the Executive Council who are in charge of the "reserved subjects", and three charge of the "reserved subjects", and three Ministers, who are in charge of the "transferred subjects" subjects.

Bengal is administered by five Commissioners, the divisions being those of the Presidency, Burdwan, Rajshahi, Dacca and Chittagong. The unit of administration is the District Magistrate and Collector As Collector he supervises the ingathering of the reverue and is the head of all the Departments connected with it, while as District Magistrate he is responsible for the administration of criminal justice in the district. The immediate superior of the District Magistrate is the Divisional Commissioner Commissioners are the channels of communication between the local officers and the Government In certain revenue matters they are, in their turn, subject to the Board of Revenue in Calentta, in other matters they are under the direct control of Government,

Justice.

The administration of justice is entrusted to the High Court of Calcutta which consists of the Chief Justice who is a Barrister and 15 Puisne Judges including one additional judge who are Barristers, Civilians or Vakils Below the High Court are the District and Additional Judges, the Small Causes Comt and Sahordinate Judges and Munsils Of these others, the District and Additional Judges and a certain number of Subordinate Judges are also endowed with the powers of a Criminal Court while the one dustry of the Presidency

There was some improvement in the jute the High Court, the Courts of Session and the trade of Bengal (which began to decline since Courts of the various classes of Magistrates

of appeals from the order of a Court of Session, and it also confirms, modifies or annuls sentences of death passed by Sessions Courts Calcutta has six Stipendiary Presidency Magistrates, including one temporary Additional Magistrate in charge of the Traffic Court One of the Presidency Magistrates is in charge of the Children's Court, is helped by Hony Women Magis-trates. It has also two Municipal Magistrates and it possesses a Court of Small Causes with Judges who dispose of cases of the class that are usually heard in County Courts in England.

In addition a number of Union Benches and Courts have been established in selected rural areas for the disposal by honorary agency of petty criminal cases and civil disputes.

Local Self-Government.

By Bengal Act III of 1884, and its subsequent amendments, which hisherto regulated municipal bodies in the interior, the powers of Commissioner of municipalities were increased and the elective hanchise was extended Bengal Act III of 1884 was repealed by Act XV of 1932 by which material changes have been introduced, eq, the franchise of the electors have been further widened, women have been enfranchised, the proportion of elected commissioners has been increased and the term of office of the Commissioner has been extended from three to lour vears. Municipal expenditure now comprises a large number of objects, including veterinary institutions, employment of health officers, vaccinators and sanitary inspectors, the training and employment of female medical practitioners, the provision of model dwelling houses for the working classes, the holding of industrial sanitarv and health exhibitions and the improvement of breed of cattle The Commissioners also have large powers in regard to the water supply and the regulation of buildings.

The Municipal Government of Calcutta is governed by Act III of 1923 This Act, which replaces Act III of 1899, makes the Corporation replaces Act III of 1899, makes the Corporation paramount in matters relating to municipal administration. The Act provides for the appointment of a Mayor, who replaces the chairman of the old Act, a Deputy Mayor, and Executive Officer, and Deputy Executive officers, all elected by the Corporation. The appointment of the Chief Executive Officer is subject to the approval of Government The total number of councillors, after the enactment of the Calcutta Municipal (Second Amendment, Act, 1932, is 91 with 5 Aldermon elected by the Councillors. Of the 91 seats. 81 are clocted. Councillors. Of the 91 scats, 81 are elected, of which 21 are reserved for Muhammadans. Ten of the councillors are nominated by Government and the rest elected by the general or special constituencies In order to improve the insanitary and congested areas of the city, the Calcutta improvement Trust has been created with extensive powers. In the motusul, district and local boards exercise considerable powers, with regard to public works, education and medical relief

Bengal Act V of 1919 introduces the new system of self-government by the creation of village authorities vested with the powers and duties necessary for the management of village affairs and entrusted with powers of self-taxation. The new village authority, called the union

with the village police, village roads, water supply, sanitation, primary schools and dispen-saries. The Act also empowers Government to create out of the members of the union boards, village benches and courts for the trial of petty criminal and civil cases arising within the union. The Act has been extended to all districts in the Presidency except Midnapore and up to March 1933 over 4,701 Union Boards were actually constituted.

Public Works.

The Public Works Department consists of Public Works and Railway Departments and is under the charge of Secretary to Government in the Department of Agriculture and Industries,

The Public Works Department deals with questions regarding the construction of public buildings and roads.

The Railway Department deals with questions regarding acquisition of lands required by the several Railways, the alignment of new lines of Railways, and with Tramway projects.

There is a Clincf Engineer who is the principal professional adviser of Government.

Marine.

The Marine Department deals with questions connected with the administration of the port of Calcutta and inland navigation, including the control and administration of Government launches except the police launches, and the Government Dockyard, Narayangani,

Irrigation.

The Irrigation Department deals with irrigation, navigation, flood protection by means of embankments and draining, the latter including relief from congestion of draininge by regulating the available supplies of water to suit the requirements of agriculture combined with the supply of water for irrigation in cases in which a supply is available.

Police.

The Bengal Police force comprises the Military Police, the District Police, the Railway Police, and the River Police. The Bengal Police are under the control of the Inspector-General of Police, the present Inspector-General being a member of the Imperial Police Service. Under him are Deputy Inspectors-General for the Dacea Range, the Rajshahi range, the Presidency range, the Burdwan range and the Bakarganj range and also one Deputy Inspector-General in Charge of the C I D and the Intelligence Branch Each district is in charge of a Superintendent, and some of the more important districts have one or more Additional Superintendents The Railway Police is divided into three distinct charges, each under a Superintendent. The River Police is also under a Superintendent. The cadre comprises Assistant Superintendents, Deputy Superintendents, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, head constables and constables. There is also a Villago Police, composed of daffadars and chowkidais, who receive a monthly salary which is collected from the villages or unions by the Panchayat or Union Board. There is a training college and school at Sardah in the district of Rajshahi where newly appointed officers and men of the Bengal Police learn their duties The Calcutta City Police is a separate force maintained chaukidari by Government under a Commissioner who is board, replaces gradually the old chaukidari by Government under a Commissioner who is Danchayats and the union committees and deals responsible direct to Government. The Commissioner has under him Deputy Commissioners, missioner has under him Deputy Commissioners, Assistant Commissioners, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, head constables and constables. A school for the training of recruits for the Calcutta Police force has been established at Calcutta. The annual cost of the Police is over 277 lakhs.

The head of the Medical Department is the Surgeon General with the Government of Bengal In the districts the Civil Surgeons are responsible for medical work There are 44 hospitals and dis pensaries in Calcutta, 11 of which are supported by the Government and 860,540 persons were treated at these institutions of whom 57,177 were in-patients. In the Motusil districts there are 1,200 hospitals and dispensaries, the number ore 1,200 hospitals and dispensaries, the number or patients treated in them as well as in several huts, fairs, melas, subsidised and temporary dispensaries and in various medical centres was 9,083,248.

Education.

In the Presidency of Bengal education is imparted partly through Government agency imparted partly through Government agency and partly through private bodies, assisted to some extent by Government grants-la-aid. Government maintains four Arts Colleges In Calcutta (of which one is a college for women, one is for Mahomedans and one the Sanskrit College), one at Hughli, one at Krishnagar, three, including the Islamic Inter College, at Dacca, one at Rajshahi and one at Chittagong It also maintains two training Chittagong. It also maintains two training colleges, one at Calcutta and one at Dacca, for teachers who teach in secondary schools through the medium of English, and 5 normal schools, one in each division, for the training of teachers in secondary schools who teach through the medium of the vernacular: also an engineering college at Siburr and an engineering school at Dacca, two medical colleges, a veterinary college, a school of art and a commercial school college, a school of art and a commercial school in Calcutta, and a weaving school at Serampore. It also provides at the head quarters of all districts except Burdwan and Midnapore, and also at certain other mofusal centres, English high schools for the education of boys, while to some Government Arts Colleges high schools are attached. In Calcutta there are five Government high schools for boys, two of which are attached to the Presidency College and one to the Sanskrit College. Government high schools for girls exist only in the headquarters stations of Calcutta. Dacea Mymnensingh. Comilia and Chit. cutta, Dacca, Mymensingh, Comilla and Chittagong. The other secondary schools, with the exception of a few middle schools managed either by Government or by municipal and district boards, are under private control. The adminisboards, are under private control. The administration of primary education in all areas, which are not under municipalities, rests with the district boards, grants being given from provincial revenues to the boards, which contribute only slightly from their own funds. Only in backward localities are such schools either entirely managed, or directly aided, by Government. Apart from the institutions referred to above, 80 institutions called Guru Training Schools are maintained by the Department for the training of primary school teachers. For the training of primary school teachers. For the education of Mahomedans, there are senior Madrasas at Calcutta, Dacca, Chittagong, Hughli

for technical and industrial education. institutions for technical and industrial education (except B. E. College, the Ahsanullah School of Engineering, Dacca, the Government Commercial Institute and the Government School of Art, Calcutta) are now under the control of the Director of Industries. A large proportion of educational work of every grade is under the control of various missionary bodies, which are assisted by Government grants-in-aid.

The municipalities are required to expend a certain proportion of their ordinary income on education. They are mainly responsible for primary education within their jurisdiction, but schools in these areas are eligible also for grants from Government. These bodies maintain a high school at Burdwan, a high school at Santipur, a high school at Kushtia and a high school at Chittagong.

In 1932-33 there were in the Presidency :-RECOGNISED INSTITUTIONS FOR MALES.

The United Provinces.

a practically the centre of Upper India. They re bounded on the north by Tibet, on the orth-east by Nepal, on the east and south-ast by Bihar, on the south by two of the Chota Vagpur States of the Central India Agency and he Saugor district of the Central Provinces, nd on the west by the States of Gwallor, Dholour, Bharatpur, Sirmoor, and Jubbal, and by the runjab. Their total area amounts to 106,248 quare miles, to which may be added the area of the three Indian States of Rampur, Tchristrhwal and Benares with an area of 5,943 square miles, giving a total of 112,191 square miles. The total population is 49,614,833.

The Provinces, originally termed the North-Western Provinces and so amalgamated in 1877, receiving their present designation in 1902, include four distinct tracts of country: portions of the Himaleyas, including the Kumaon livision which consists of three hill districts, two of which are entirely in the hills and one a half in the submontane belt, the sub-Himalayan tract; the great Gangetic plain, and portions of the hill systems of Central India including Bundelkhand. The Gangetic plain is protected by an extensive Canal system, which though somewhat liable to run short of water in extremely dry years, is of great benefit in all ordinary years and years of limited drought. The first two of these tracts are infertile and support a very sparse population and the Central Indian plateau is almost equally infertile, though better populated. The soil of the Gangetic plain, however, possesses an extreme fertility and here the density of population varies from 542 persons per square mile in the west to 555 in the centre and 753 in the east, which gives the Provinces as a whole a greater population pressure on the soil than any other Province in India save Delhi and Bengal. In the south there are low rocky hills, broken spurs of the Vindhyan mountains, covered with stunted trees and jungle, and in the north the lower slopes of the Himalayas, dothed with dense forest, affording excellent big and small game shooting, and rising beyond in a tangled mass of ridges, ever higher and higher, until is reached the line of the eternal snows, but the greater part of the provinces consists of level plain, teeming with highly-ulityated fields and watered by three rivers the Ganges, Jumna, and Gogra.

The People.

The population is mainly Hindu, 84 4 per cent ranking as such whilst Mahomedans number 15 or cent., the total of all other religions by mg 0 6 per cent. composed of Christians (Buropeans and Indians), Jains, Sikhs, Parsis, Butdhists and Jews. Included among the Hindus are the Arya Samajists, followers of the Arya Samaj sect, which obtains widely the Punjab and has extended its influence to the United Provinces. The three main the United Provinces. The three main itsical types are Dravidian, Aryan and Mangoloid, the latter being confined to the

The United Provinces of Agra and Oudh lie practically the centre of Upper India. They the people, however, show a mixed Aryaroth-east by Nepal, on the east and southsit by Bihar, on the south by two of the Chota agpur States of the Provinces. Most relationship with Persian and Arabic on the one hand and Hindi on the other, forming the lingua franca of the Province.

Industries.

The thief industry is agriculture, which is the principal source of livelihood of 71,1 per cent of the population and a subsidiary source of income to a further 8 2 per cent. The soils of the Provinces fall into three groups: the valley soils of the Himalayas, the main alluvium and the Central Indian alluvium. the chief characteristic soil or the Central Indian alluvium is the black soil, with a lighter variant, though here also there are light loams and gravel. The Hunalayan solls are of local origin and vary with the nature of the rock from which they have been formed, whilst the main alluvium soils peen formed, whilst the main alluvium soils are sand, clay and loam, the loam being naturally the most productive. The soil generally yields excellent crop of rice, millet, maize, linseed, cotton, wheat, sugarcane, pulses, and barley, nee being grown mostly in low-lying, heavy clays. The greater part of the Provinces is highly cultivated, the rainfall varies from 50 to 60 inches in the Rena. to 60 inches in the Hills, to 40 inches in the Benares and Gorakhpur Divisions, whilst the Agra Division receives only about 25 to 30 inches annually. Drought seriously affected Bundelkhand and the Agra Divisions, in the past; improved drainage and irrigation facilities have effected considerable improvements. In the latter area, however, shortage of water in the canals and the general lowering of the water table still continue to react against full agricultural returns Steps are being taken to increase the amount of water passing down the canals Commodity prices showed a definite decline throughout the year 1934 Though in some cases the pieces in January of 1934 ruled higher than those of 1933, by December all commodity prices were at a lower level than at the corresponding date of the previous year. In general the harvested crop of 1934 was poorer than that of 1933. It cannot be said that those solely dependent on agricultural produce are in any way better off than in the previous year. Land is held mostly on the ryotwari tenure in Bundelkhand and Kumaon, on zemindari tenure in Agra and taluqdarı tenure in Oudh The prinopal landowners in Oudh are the Talugdars, The area some of whom own very large estates held in taluquari tenure amounts to 54 per cent of the total area in Oudh.

Manufactures.

The provinces are not rich in minerals. Iron and copper are found in the Himalayan districts, and there were mines of importance there formerly, but owing to high cost of production and maccessibility, most of them have been Jugoloid, the latter being confined to the closed Gold's found in minute quantities by malayan and sub-Himalayan districts and washing the sands in some of the rivers in former to South Mirzapur and Bundelkhand, the hills Limestone is found in the Himalayas whilst the high-caste Aryans frequent the and in the Etawah district, and stone is

largely quarried in the Mirzapur district. Cotton is ginned and spun throughout the Western districts of the provinces as a home industry; and weaving by means of handlooms, is carried on in most districts. Cawnpore is the chief centre for cotton spinning and weaving mills. According to the census of 1931, 45,128 persons were employed on cotton ginning, cleaning and pressing and 408,033 on spinning and weaving. Silk weaving used to be confined to Benares (where the iamous 'Kimkhab' brocade is made) but considerable work is now done at Shahjahanpur and Mau and some at Agra as well Embroidery work is done at Lucknow, where the noted 'Chikan' work of cotton on muslins is produced, and in Benarcs, where gold and silver work on silk, velvet, crepe and sarsenet obtains. Benarcs uses local gold thread for embroidery work and Kimkha b' weaving. The glass industry is important at Firozabad, Bahod, Balawah and Naini (Allaha-bad). Moradabad is noted for its lacquered brass-work, Benares for brassware-engraving and repousse. Farrukhabad for its calico prints and Agra for its carpets and marble and alabaster articles, glazed pottery is made at Chunar and Khurja and clay figures of men and fruits at Lucknow.

The making of brass utensils at Mirzapur, Farukhabad and Oel (District Kheri): the carving and inlay work of Nagina and Saharanpur, the art silk industry of Panda and Mau, the lock and brass fittings industry of Aligarh, the copper utensil industry of Almora, the durries of Agra and Bareilly, the pottery of Nizamabad (District Azamgarh) and the ivory work of Lucknow also deserve mention.

Cawnpore is the chief industrial centre, It has tameries, soap factories, oil mills, cotton, woollen and other mills. The woollen mill is the largest in India. Lucknow possesses an important paper-mill and also a cotton mill. There are cotton ginning and pressing factories at Aligarh, Mecrut and Bareilly and cotton mills at Argari, succrut and parenty and couldn't man at Agra, Hathras, Lucknow, Benares and Moradabad Many sugar mills have been recently started, mainly in the Gorakhpur, Rohlikhand and Meerut divisions Excellent furniture is made at Barcilly mostly on cottage

The largest trade centres are Cawnpore, Allahabad, Mirzapur, Benares, Lucknow, Meerut, Allahabad, Mirzapur, Benares, Lucknow, Meerut, Aligarh, Hathras, Muttra, Agra, Farrukhabad, Moradabad, Chandausi, Barcilly, Saharanpur, Muzaffarnagar, Ghaziabad, Khurja, Gorakhpur, Ghazipur, Pilibhit and Shahjahanpur.

Administration.

The Province was until the close of 1920 administered by a Lieutenant-Governor, chosen from the ranks of the Indian Civil Service. Under the Reform scheme the Province was raised to the status of a Governor-in-Council. the Governor being assisted by two members of the Executive Council in charge of the Reserved Subjects and two Ministers in charge

Deputy Legal Remembrancer who are ex-Officio Deputy Secretaries in the Education and Judicial Departments respectively. There are also 4 Under-Secretaries (including the Deputy Director of Public Instruction who is ex-Officio Under-Secretary in the Education Department) and 4 Assistant Secretaries The Chief Secretary is in charge of Appointment, General Administration, Executive, Political, Newspaper and Police Departments; the Finance Secretary deals mainly with the Finance Department; the Revenue Secretary is in charge of the Revenue Scarcity, Ecclesiastical and Forest Departments and also the Buildings and Roads branch of the Public Works Department; the Education Secretary is in charge of the Education, Industries, Agriculture and Excise Departments; the L. S. G. Secretary is in charge of the local Self-Government, Municipal, Medical and Public Health Departments and the Judicial Secre-Health Departments and the Judicial Secretary is in charge of the Judicial and Legislative Departments. The seventh Secretary belongs to the Public Works Department (Irrigation Branch) and is also Chief Engineer for the Irrigation Branch of the P.W.D. Government spends the cold weather, October to April, in Lucknow and Allahabad, mostly in Lucknow, though the Secretariat remains throughout the year at Lucknow. The Governor and the Secretaries spend the hot weather in Naini Tal, but during the monsoon the Governor tours the plains, as he does also in the cold weather. The Board of Revenue is the highest court of appeal in revenue and rent cases lying within appeal in revenue and rent cases lying within its jurisdiction. being the chief revenue authority in the province. There are forty-sight British districts, thirty-six in Agra and twelve in Oudh, average area 2,200 square miles and average population a milion Each district is in charge of a District Officer, termed a Magischarge of a District Officer, cerimical and an English rate and Collector in Agra and a Deputy Commissioner in Oudh and Kumaon. The districts are grouped together in divisions. Each division is under a Commissioner, except the Kumanu division, the charge of which the ball with the Division of the Commissioner. is held by the Deputy Commissioner, Naini Tal, in addition to his own duties. There are ten divisions, having an average area of nearly 10,600 square miles and an average population of nearly 5 millions. The districts are sub-divided into tahsils, with an average area of 500 square miles and an average population of 236,000. Each Tahsil is in charge of a Tahsildar, who is responsible for the collection of revenue, and also exercises judicial powers. Tahsildar are divided into paraganas which are units of importance in the settlement of land revenue. Subordinate to the Tahsildars are naib tahsildars and kanungos. Ordinarily there are three kanungos and one naib tahsildar to a tahsul. The Kanungos supervise the work of the privaris, or village accountants, check their papers and form a link direct between the villagers and Government. For judicial purposes (revenue and criminal), the District Officer assigns a sub-division, consisting of one or more miles and an average population of 236,000. Each signs a sub-division, consisting of one or more Reserved Subjects and two ministers in charge signs a sub-division, consisting or one or more of the Transferred Subjects. The medium for tabile, as the case may be to each of his subordithe transaction of public business is the nates, who may be covenanted civilians (Joint Secretaries (including ChiefiSecretary), two joint members of the Provincial Service (Deputy Secretaries and 7 Deputy Secretaries including Collectors and Magistrates). The Commissioner the Director of Public Instruction and the of the Robilkhand Division is Political Agent for

Justice is administered by the High Court of Judicature at Allahabad in the province of Agra and by the Chief Court of Oudh sitting at and by the Chief Court of Ouan sitting at purposes of expenditure on the construction, Lucknow which are the final appellate authorities in both criminal and civil cases. The chief source of municipal meome is the octrol or former consists of a Chief Justice and eight terminal tax and toll which is an octrol in modifier and three temporary pulsae judges fied form. Local opinion is strongly in favour six of whom including the Chief Justice are of indirect as opposed to direct taxation for Indians, and the latter consists of a Chief numerical purposes

Judge and four judges four of whom Indians, and are Indians. There are thirty-two posts (twenty-four in Agra including two posts temporarily held in abeyance and eight in Oudh) of district and sessions judges of which nine are held by Indians not belonging to the Indian Civil Service as they have been listed to the provincial service and the bar. They have both original and appellate jurisdiction in civil and criminal cases and occasional appellate metalled roads maintend from Provincial pursdiction in rent cases. District Officers and funds and construction of all buildings their assistants including tabsildars, preside in coating more than Rs. 20,000 are in charge criminal courts as magistrates and as collectors of the Buildings and Roads branch. and assistant collectors, in rent and revenue courts and dispose of a good deal of the work. Kumaun has been brought under the Civil jurisdiction of the High Court from 1st April 1926. The deputy and assistant commissioners exercise inferior civil powers in this division which has schemes. The province is divided into circles no separate civil courts. In the rest of the and divisions provinces there are subordinate judges, judges of small cause courts and munsifs who dispose of a large number of civil suits. In Agra the jurisdiction of a subordinate judge extends to all original suits without pecuniary limit and a munsif can hear cases ordinarily of a value not exceeding Rs. 2,000, and if specially empowered up to Rs. 5,000. In Oudh the ordinary jurisdiction of a subordinate judge extends to suits valuing not more than Rs. 20,000 and the ordinary jurisdiction of a munsif to suits of Rs. 2,000 value, provided that in special cases the limit of pecuniary jurisdiction can be removed altogether in the case of a subordinate judge and that of the munsif raised up to Rs. 5,000. Appeals from munsif always lie to the district judge while those from the subordinate judges go to the High Court or the Chief Court except in cases of a value of Rs. 5,000 or less which are heard by the district judge. Small cause court unders try units to the value of Rs. 500. There judges try suits to the value of Rs. 500. There are also honorary munsifs limited to Rs. 200 suits, and village munsifs whose jurisdiction is fixed at Rs. 20.

district and municipal boards which, with the fans and minor industries, it provides energy for exception of two municipal boards, have non-irrigation pumping from rivers and low level official Chairmen. Most of the municipal boards canals as well as from tube and open well-having an annual income of Rs. 50,000 or over Out of the ultimate output of 28,000 kilowatts. have executive officers to whom certain administrative powers are reserved. The administrative and State tube-wells which are being sunk in the functions of the municipal and district boards districts of Moradabad, Bijnor. Muzaffarnagar, are performed by the Chairman and Executive Merut, Bulandshahr and Budaun. Some 1460 Officer or the secretary, but the boards them-tube-wells are now under construction of which

the Indian States of Rampur and Tehri-Garhwal rate levied from the landowners. Some of the and the Commissioner of Benares is the Political boards have recently imposed a tax on ofroum-Agent for Benares State.

Justice

Motor Vehicles Taxation Act has come into force with effect from January 1st, 1936. The tax realised under this Act will also be utilized in the payment of grants to local authorities for purposes of expenditure on the construction,

Public Works Department.

The Buildings and Roads branch is ad-The Buildings and Roads branch is administered by a Civilian Secretary and the principal administrative officer is a Chief Engineer. The Province is divided into circles and divisions Each circle is in charge of a Deputy Chief Engineer and each division is in charge of an Executive Engineer. All

The Irrigation branch is administered by a Secretary and for the present, two Joint Secretaries, all of whom are also Chief Engineers. The third Chief Engineership is a temporary post to further the organisation of development

The Irrigation branch administers the various irrigation works, the Ganges Canal Hydro-electric Grid, the tube-well scheme, and other development works, such as the Daurala other development works, such as the Dauran Sugarcane trainway The hydro-electric works, tube-wells and development schemes are in charge of the Chief Engineer (Development), the Sarda Canal and the Bundelkhand Canals in charge of the Chief Engineer (East), and the Ganges, the Eastern Jumna and the Agra ('anals

are in that of the Chief Engineer (West).

3. The Sarda Canal—a work of the first magnitude—was opened in 1928 for introducing irrigation into most of the districts of Oudh.

4 The Ganges Canal Hydro-electric Grid supplies power at cheap rates for domestic, industrial and agricultural purposes to 10 districts in the west of the provinces Six of the ten falls available for electrification have been developed and another fall is in course of development. Combined with a steam station being built at Chandausi in the cast of the electrified area, a total of 28,000 kilowatts or 42,000 H P. ted at Rs. 20.

Local Self-Government.

The main units of local self-government are the 5 thou and or over, with cheap power for light, 12,000 kilowatts have been reserved for operatselves are directly responsible for most of labout 800 are in operation for the current the administration. The district boards obtain sugar season. By the end of 1937, one and a 41% of their income from Government grants, half million of acres of dry land outsale the exist. The other chief sources of income is the local ing canal areas will thus receive protection. The annual irrigation expected is 183,000 acres of remainder are under private management and sugarcane, 350,000 of wheat and 90,000 acres of are aided by Government.

In addition to direct local irrigation from such tube-wells, water is being pumped from some 75 additional wells of larger capacities into the channels of the Ganges Canal system in the Moerut district thereby releasing 220 cusees of river water for extending urigidion in the less fortunate tracts of the Agra and Muttra districts where local tube-wells cannot be sunk for geological reasons

The Ganges Grid scheme thus furnishes the means of supplying a total of 3,160 cusees for additional irrigation in the western districts or about 3rds of the cold weather flow of the Ganges river

5. In the east of the provinces a project has been recently sanctioned for lifting 180 cusees from the Gogra river by electric pumps to be operated by a steam generating station near Fyzabad.

The construction of the Daurala sugarcane trainway for tapping an area of 14,000 acres of canal imagated sugarcane in the Meeting district has been completed. This trainway will carry 105,000 tons of cane from remote areas to the rail-head on the North Western Railway at a rate of half a pie per maund per nule

Police.

The Police Force is administered by an Inspector-General, with three Deputies and two Assistants, forty-six Superintendents, forty-six Assistant Superintendents and fifty-six Deputy Superintendents including three temporary officers There is a Police Training School at Moradabad under a Superintendent of Police as Principal There is a C I D form ing a separate department, under a Deputy Inspector-General with three Assistants The armed police of the three police ranges have recently been rearmed with the '410 musket, the 476 musket and th' Martini Henrille having formed their previous armament ministration of the Jail Department is in charge of an Inspector-General of Prisons, who is a member of the Indian Medical Service

Education.

Education is maintained in part by the State and partly by means of grants-in-aid. There are five universities, the four residential universities of Allahabad, Lucknow, Aligarh (Muslim) and Benares (Hindu) and the affiliating Univerand Benares (Hindu) and the attinating University of Agra. The last named was established in 1927 and consists, besides six affiliated colleges situated outside the United Provinces, of the eight colleges, formerly associated with Allahabad University on its external side, viz., the Agra and St. John's Colleges at Agra, the Christ Church, D.A.V. and Sanatan Dharma Calleges at Caymore, the Meer. it Sanatan Dharma Colleges at Cawnpore, the Meer at College, Meerat, the Barelly College, Barelly and St. Andrew's College, Gorakhpur. There are Intermediate Colleges and anglo-vemacular high and middle schools which prepare boys tor the high school and intermediate examinations conducted by the Board of High School and Intermediate Education, which prescribes courses for high school and intermediate education.

There are 48 Government High Schools and anglo vernac 8 Government Intermediate Colleges; the their circles.

The Isavella Thoburn College at Lucknow and the Crosthwaite (4nls' College at Allahabad impart university education to Indian gris and the Theosophical National Gris' School and Women's College at Benares, the Muslim Guls' Intermediate College at Aligarh Mahila Vidvalaya Intermediate College at Lineknow and Balika Vidyalaya Intermediate College, Cawipore teach up to the intermediate stage. In addition to these there are A V. High Schools, English Middle and vernacular Lower Middle schools and primary schools throughout the province for the education of Indian Grils, they are controlled by Chief Inspectiess of Grils' school, under the Director of Public Instruction The St George's Intermediate College, Mussoorie, the Philander Smith College, Naim Tal, the St Joseph's College, Naim Tal, and La Martiniere College, Lucknow, are the well-known institutions for European and Anglo-Indian children in the province which teach upto the intermediate stage. Besides these, there are many excellent educational institutions for European boys and girls both in the hills and plains which are attended by students from all over India. Government maintain Training Colleges for teachers in Lucknow, Allahabad and Agra, and a training department is attached to Christian Intermediate College, Lucknow. There are training departments attached to the Aligath Muslim University and the Be-Hudu University There is a Government Engineering College at Roorkee (Thomason College), a School of Art and Crafts in Lucknow and an Agricultural College, and a Technological Institute at Cawnpore; there is also a non-Government Agricultural Institute at Naim, Allahabad. Education in law is given at the four residential universities and at the Agra and Meerut colleges, and at the Dayanand Auglo-Vedic and Sanatan Dharma Colleges at Cawnpore and at the Barelly College Instruction in commerce for the B Com degree of the Agia University is given in the Sanatan Dharma and the D A V Colleges at Campore and in the St John's College at Agra; a commerce department for B Com degree is also attached to Allahabad and Lucknow Universities. The king George's Medical College, Lincknow, now merged in the Lucknow University, prepares candidates for the M B B S degree of the Lucknow University Besides this there are two medical schools at Agra tor men and women and also a College of Ayurveda and Tibbyas is attached to the Benaies Hindu and the Aligarh Muslim Universities respectively Public schools for secondary and primary vernacular education are almost entirely maintained or aided by district and municipal boards and vernacular education is administered through them and the expenditure of grants for vernacular education is in their hands. Government maintains eight Normal Schools and seventeen Central Training Schools for the training of vernacular teachers Each district has a deputy inspector of schools who is the Secretary of the Education Committee of the district board, assisted by several sub-deputy inspectors. There are seven inspectors who supervise both angle vernacular and vernacular education in

Medical.

The Medical Department is in charge of an Inspector-General of Civil Hospitals, who is assisted by a lady Superintendent for Medical aid to women in the administration of the Duffern fund affairs A post of Personal Assistant to the I G. Civil Hospitals has also been created from December 8, 1934, to relieve the I G. of the routine duties in connexion with the control of his office A Civil Surgeon is in charge and is responsible for the medical work of each district and in a few of the larger stations he has an assistant. In two stations (Rankhet and Roorkee) Medical Officers in military employ hold collateral civil charge. There are 102 Provincial Medical service officers in charge of important Moffusil dispensaries and on the reserve list and a large number of Provincial subordinate medical service officers. Lady doctors and women sub-assistant surgeons visit pardanaskin women in their own homes and much good work is done in this manner.

The best equipped hospitals for Indian patients are the Thomason Hospital at Agra, King George's Hospital and the Balrampur Hospital at Lucknow, the Prince of Wales Hospital, Cawnpore, King Edward VII Hospitals, Cawnpore, King Edward VII

tal, Benares, the Civil Hospital at Allahabad (for Europeans, Anglo-Indians and Indians living in European style) and Saint Mary's Cottage Hospital, Mussoorie. The Ramsay Hospital for tersonal is also release in the Europeans at Naini Tal is a first class institution and there are also the Lady Dufferin Hospitals. King George's Medical College, Lucknow, relieved in the Europeans at Naini Tal is a first class institution and there are also the Lady Dufferin Hospitals of the stage of the best equipped colleges in the country, with a staff of highly efficient proposed in the first in the Province. The Queen Mary's Hospital for women and children, completed in 1932, charge and provides clinical material for the employ instruction of students in midwifery and gynaecology. There are also male and female medical schools at Agra. The X-Ray institute at Dehra Dun has been closed, but a scheme for the appointment of a Provincial Institute at Dehra Dun has been closed, but a scheme for the appointment of a Provincial in X-Ray at the King George's Medical College, Lucknow, where every facility or such work where every facility for such work would be forthcoming is under the consideration of the Government. There are sanatoria for the Government at Bhowali in the district of Naini Tal is an up-to-date and well-equipped institution for the treatment of European and Indian consumptives

THE FINANCES OF THE UNITED PROVINCES.

As explained in the chapters on the new constitution of India, under the Reforms Act of 1919, the financial position of the Provinces underwent a remarkable change. The Provinces are, for all practical purposes, financially independent of the Government of India. The contribution payable by the Local Government has been remitted entirely by the Government of India with effect from the year 1928-29. As the finances of the Provinces thus become of greater importance, the position is set out in some detail in the following pages:—

ESTIMATED REVENUE FOR 1935-36.

The Punjab.

The Punjab or land of the five rivers, is so in the rainfall involves distress, if not actua called from the five rivers by which it is enclosed, namely, the Jhelum, Chenab, Ravi, etfies of Lahore and Amritsar, and the populables and Sutlej. Together with the North-tion in comparison with the western Punjab west Frontier Province and the Indian State of Jammu and Kashmir which lie to the north, an area of 59,000 square miles, with a population of the Punyab contribute the extreme particular than the state of the puncture the Punjab occupies the extreme north-west-ern corner of the Indian Empire, and with the exception of the above-mentioned province comprises all of British India north of Sund and Rajputana and west of the river Jumna. Previous to October 1912, the Punjab with its feudatories embraced an area of 186,830 square miles and a population at the Census of 1911 of 24,187,750 (inclusive of 28,587 transfrontier Baluchis), that is to say, about one-thirteenth of the area and population of the Indian Empire. But the formation of a separate province of Delhi reduced the area and population of the Punjab by about 450 square miles and 380,000 souls, respectively. The total population of the Province in 1931, including the Baloch tribes on the border of the Dehra Ghazi Khan District, was 28,400,857 of whom 4,910,005 were in the Indian States.

Physical Features.

The greater part of the Punjab consists of one vast alluvial plain, stretching from the Jumna in the east to the Suleman Range in the west. The north-east is occupied by a section of the Himalayas and the Salt Range forms its north-western angle. A few small spurs of the Aravalli mountain system traverse the extreme south-east and terminate in the the extreme south-east and terminate in the Ridge at Delhi. The Punjab may be divided into five natural divisions. The Himalayan tract includes an area of 22,000 square miles, with a scanty population living scattered in tlny mountain hamlets. The Sait Range tract includes the districts of Attock, Rawalpindi and Jhelum and part of Shahpur district. Its physical configuration is broken and confused and the mountainous tracts of Murree and Kahuta approximate closely in character-istics to the Himalayan tract. Except in the hills, the rainfall leaves little margin for protection against distress in unfavourable seasons and irrigation is almost unknown. Skirting the base of the hills and including the low range of the Siwaliks, runs the narrow sub-montane tract. This tract, secure in an ample rainfall, and traversed by streams from the hills, comprises some of the most fertile and thickly populated portions of the province. Its population of over four millions is almost agricultural and pastoral but it includes one large town in Sialkot. Of the piains of the Punjab, the eastern portion covers an area of some 36,000 square miles with a population of 104 millions. East of Lahore, the rainfall one-third Sikh and one-such Hindu. In disis everywhere so far sufficient that cultivation is possible without irrigation in fairly favourable seasons, but over the greater part of the area the margin is so elight that, except where intrigation is employed, any material reduction of the Siwaliks, runs the narrow sub-montane

in the rainfall involves distress, if not actual famine. Within the eastern plains lie the large cities of Lahore and Amritsar, and the population in comparison with the western Punjab is largely urban. The western plains cover an area of 59,000 square miles, with a population of a little over six millions. The rainfall in this area, heaviest in the north and east and decreasing towards the west and south east and decreasing towards the west and south is everywhere so scanty that cultivation is only possible with the aid of artificial irrigation or possible with the aid of artificial irrigation or upon the low-lying river-banks left moist by the retreating floods. In this very circumstance, these tracts find their security against famine, for there cultivation is almost independent of rain, a failure of which means nothing worse than a scarcity of grass. So little rain is sufficient, and absolute drought occurs so seldom that the crops may be said never to fail from this cause. The western plants embrace the great colony areas on plains embrace the great colony areas on the Chenab and Jhelum Canals which now the Chenab and Jhelum Canals which now challenge the title of the eastern plains as the most fertile, wealthy and populous portions of the province. Multan and Lyallpur are the largest towns in the western area. Owing to its geographical position, its scanty rainfall and cloudless skies, and perhaps to its wide expanse of untilled plains, the climate of the Punjab presents greater extremes of both heat and cold than any other portion of India. The summer. from April to Septem-India. The summer, from April to September, is acorchingly hot, and in the winter, sharp frosts are common. But the bright sun and invigorating air make the climate of the Punjab in the cold weather almost ideal.

States.

The Indian States of the Punjab were formerly in the Political charge of the Punjab Government. In 1921, however, the thirteen most important States, including Patiala, Bahawalpur, Jind and Natha, were formed into a separate "Punjah States Agency" under the control of the Agent to the Governor-General, Punjah States. The only States remaining in the charge of the Punjah Government are the Simla Hill States, for which the Deputy Commissioner of Simla is Political Officer, and three small States in the Ambala Division, Kalsia, Patandi and Dujana, which are supervised by the Commissioner of Ambala.

about a fourth are Hindus and a very few Sikhs. They are widely distributed over the province. Both Jats and Rajputs of the Punjab provide many of the best recruits for the Indian Army. In fact all the agricultural classes of the Punjab, except in the southwestern districts, made a magnificent response to the appeal for recruits in the great war and the province's contribution of upwards of 400,000 men to the man power of the Empire 400,000 men of the man post of the speaks for itself. The Gujars are an important agricultural and pastoral tribe, chiefly found in the eastern half of the province and in the extreme north-west. In organisation they closely resemble the Jats and are often absorbed closely resemble the Jata and are often absorbed into that tribe. There are many minor agricultural tribes, priestly and religious castes (Brahmans, Sayads and Kureshis), most of whom are landholders, the trading castes of the Hindus (Khatris, Aroras and Banias), the trading castes of the Mahomedans (Khojas, Parachas and Khakhas), and the numerous artisan and menial castes. There are also vagrant and criminal tribes, and foreign elements in the population are represented by the Baluchis of Dera Ghazi Khan and neighbouring districts in the west, who number about districts in the west, who number about balf a million and maintain their tribal vystem, and the Pathans of the Attock and Misnwall districts. Pathans are also found scattered all over the province engaged in horsedealing, labour and trade. A small Tibetan element is found in the Himalayan districts.

The mair language of the province is Pun-labi, which is spoken by more than half the population. Western Punjabi may be classed population. Western Funian may be classed as a separate language, sometimes called Lahndi, and is spoken in the north and west. The next most important languages are West-ern Hindi, which includes Hindustani and Urdu (the polished language of the towns) Western Pahari, which is spoken in the hill tracts; and Rajasthani, the language of Rajputana. Baluchi, Pushto, Sindhi and Tibeto-Burman languages are used by small sections of the population.

Agriculture.
Agriculture is the staple industry of the province affording the main means of subsistence to 65.5 per cent. of the population. It About one-sixth of the total area in British districts is Government property, the remaining five-sixths belonging to private owners, and a large part of the Government land is so situated that it cannot be brought under to stuated that it cannot be brought under cultivation without extensive irrigation. Thus the Lower Chenab Canal irrigates 1,261,177 acres of what was formerly waste land, the Lower Jhelum Canal, 4,18,000 acres, and the Lower Bari Doab Canal, adds 1,005,000 acres to this total On account of the opening of the Sutlej Valley Canals an area of about 1,244,000 acres more has been brought under cultivation Large has been brought under cultivation. Large areas in the hills and elsewhere which are unsuited to cultivation are preserved as forest lands, the total extent of which is about 6,000 square miles. Of the crops grown, wheat the most important and the development of irrigation has led to a great expansion of the wheat area. Next in importance to wheat

is gram. Other important staples are barley rice, millets, maize, oilseeds (rape, toria and sesamum), cotton and sugarcane. In the canal colonies large areas of American cotton are grown but in the other cotton-growing districts the short staple indigenous varieties are predominant. The country being preponderantly agricultural, a considerable proportion of the wealth of the people lies in live-stock. Large profits are derived from the cattle and dairy trades and wool is a staple product in Kulu and Kangra and throughout the plains generally. The production of hides and skins is also an important industry. industry.

Industries.

The mineral wealth of the Punjab is small, rock salt, saltpetre and limestone for road building being the most important products. There are some small coal mines in the Jhelum, Shahpur and Mianwali districts. Gold washing is carried on in most of the rivers not without remunerative results. Iron and copper ores are plentiful but the difficulty of carriage and the absence of fuel have hitherto prevented smelting on a large scale. The Puniab is not a large manufacturing province, the total number of factories being only 730 the majority of which are cotton ginning and pressing factories. Blankets and woollen rugs are produced in considerable quantities and the carpets of Amritsar detable quantities and the carpets of Amritsar are famous. Silk weaving is also carried on and the workers in gold, silver, brass, copper and carthenware are fairly numerous Ivory carving is carried on extensively at Amritsar and Lenah and also in the Pathala State. Mineral oil is being extracted and refined in the Attock and Rawaipindi Districts and a cement factory is established at Wah near Hassanabdal. There are three match factories in the Punjab, vis, one at Shahdara and two at Gujranwala and a factory for the hydrogenation and refining of oils at Lyallpur.

Administration.

Prior to the amendment of the Government of India Act in 1919 the head of the administraof India Act in 1919 the head of the administration was a Leutenant-Governor, drawn from
the ranks of the Indian Civil Service. Under
the amended Act the province was raised
to the status of a Governorship, with an
Executive Council and Ministers, the Governorin-Council being in charge of the Reserved
Subjects and the Governor with his Ministers of
the Transferred Subjects. The general system
of provincial administration under this scheme
is sketched in the section "Provincial Governments" (a. n) where is also given a list of the ments" (q v.) where is also given a list of the Reserved and Transferred Subjects. Associated with the Governor and the Council and Ministers is an enlarged Legislative Council, with wide powers, whose scope and authority are given in the section "Legislative Councils" (q.v.), the system being common to all the major provinces. The business of Government is carried on through the usual Secretariat which consists through the usual Secretariat which consists of five Secretaries, designated (1) Chief, (2) Home, (3) Finance, and (4) Transferred Departments, (5) Electricity and Industries Deptt's, one Deputy Secretary, two Undersecretaries, and one Assistant Secretary. In the Public Works Department, there are five Chief Engineers (Secretarics except in the case of Hydro-Electric Branch) one in the Buildings and

Roads Branch, one in the Hydro-Electric Branch and three in the Irrigation Branch, while the Legal Remembrancer is also the Secretary to Government in the Legislative Department. The head of the Police Department is Joint Secretary and of Education Department is Joint Secretary to Government. The Government where in Lahore and the summer (from the middle of May to the middle of October) in Simia. Under the Governor, the province is administered by five Commissioners (for Ambala, Juliundur, Lahore, Rawalpindi and Multan) who exercise general control over the Deputy Commissioners—29 in number—each of whom is in charge of a district.

The principal heads of Department in the province are the two Financial Commissioners (who are the highest Court of Revenue jurisdiction, and heads of the departments of Land and Separate Revenue and of Agriculture and the Court of Wards), the five Chief Engineers, the Inspector-General of Police, the Director of Public Instruction, the Inspector-General of Pilsons, the Inspector-General of Civil Hospitals, the Director of Public Health, the Chief Conservator of Forests, the Director-General of Registration, the Eggistra of Co-operative Credit Societies and Joint Stock Companies and the Legal Remembrancer.

Justice.

The administration of justice is entrusted to a High Court, which is the final appellate authority in civil and criminal cases, and has powers of original criminal jurisdiction in cases where European British subjects are charged with serious offences and original civil jurisdiction in special cases. The Court sits at Lahore and is composed of a Chief Justice and eight Puisne Judges (either civilians or barristers), and temporary Additional Judges, two Subordinate to the High Court are the District and Sessions Judges (25 in number) each of whom exercise civil and criminal jurisdiction in a civil and session division comprising one or more districts. In districts in which the Frontier Crimes Regulation is in torce the Deputy Commissioner on the finding of a Council of Eiders (Jirga) may pass sentence up to seven years imprisonment.

Local Self-Government.

Local Self-Government is secured in certain branches of the administration by the constitution of District Boards, each exercising authority over a district; of Municipal, Small Town, and Notified Area Committees each exercising authority over an urban area, and of Panchayats, each exercising authority over a revenue estate or a compact group of revenue estates. The funds of District Boards are derived from a cess on the land revenue of the district supplemented by Government grants, profession taxes and miscellaneous fees, and those of Municipal, Small Town, and Notified Area Committees from octroi or terminal tax and other forms of taxation from Government grants and from rents and miscellaneous fees. The Panchayat system is an attempt to revive the

Roads Branch, one in the Hydro-Electric Branch and three in the Irrigation Branch, while elected committee or Panchayat possessing the Legal Remembrancer is also the Secretary conferment in Legislative Department. The head of the Police Department is Jont Segretary and of Education Department an Under Secretary to Government. The Govern- or now elected and elections are as a rule keenly ment writer in Labors and the summer (from the contested.)

Police.

The Police iorce is divided into District Police, Railway Police and Criminal Investigation Department. The combined force is under the control of the Inspector-General, who is a member of the gazetted force and has under him three Deputy Inspectors-General in charge of ranges comprising several districts and a fourth Deputy Inspector-General in charge of the Criminal Investigation Department and of the Finger Print Bureau at Phillaur. There is a Police Training School at Phillaur controlled by a Principal of the rank of Superintendent of Police. The Railway Police are under an Assistant Inspector-General. The District Police are controlled by Superintendents, each of whom is in charge of a district and has under him one or more Assistant Superintendents or Deputy Superintendents.

Education.

The strides which have been made in the past decade especially in the concluding years of the period, have brought the Punjab into line with the older and more forward provinces. The advance has not been confined to any one form of education but is spread over all grades and varieties. In addition to institutions maintained in all parts of the province by private enterprise, Government itself maintains sixteen arts colleges (including one for Europeans and three for women), three normal schools for males, sixteen training classes, and combined institutions for females, one hundred and twenty-two secondary schools for boys and girls and sixty centres for vocational training. Apart from these institutions for general education, Government maintains seven higher grade professional institutions, viz., the King Edward Medical College and Veterinary College at Lahore, the Agricultural College at Lyallpur, the Engineering College at Moghalpura, the Central Training College, Lahore the Lady Maclagan Training College, Lahore the Lady Maclagan Training College. Lahore the Lady Maclagan Training College at Ghoragali, and two schools, viz., the Medical School at Amritsar and the Engineering School at Rasul. In addition there are thirty-five technical and industrial schools (thirty-two for males and three for females) scattered over the province.

The Department of Education is in charge of the Minister for Education who is assisted in the work of administration by the Director of Public Instruction.

Medical.

a cess on the land revenue of the district supplemented by Government grants, profession taxes and miscellaneous fees, and those of Municipal, Small Town, and Notified Area (Committees from octrol or terminal tax and other forms of taxation from Government grants and from rents and miscellaneous fees. The Civil Hospitals, who is at present an officer of the Indian Medical Service holding the rank of Colonel. He is assisted by an officer of the Assistant Inspector-General of Civil Hospitals, who is at present an officer of Panchayat system is an attempt to revive the

Public Health.

The Department of Public Health is controlled by the Director of Public Health who has, working under him, four Assistant Directors of Public Health, 37 District Medical Officers of Health, and twenty-eight District Santary Inspectors. In addition there is a temporary staff of 10 Sub-Assistant Health Officers and 15 Santiary Inspectors for assistance in combating epidemic diseases. The ancillary services comprise

- (1) A Vaccine Institute which is in charge of the Assistant Director of Public Health, Punjab (Technical) Vaccination, assisted by a Superintendent and which prepares sufficient vaccine lymph to meet the needs not only of the Punjab, but of the Army in Northern India and of several provinces and Indian States in and beyond the confines of India.
- (2) An epidemiological bureau, which is in charge of the Epidemiologist to Government where, in addition to routine bacteriological examination, research work in matters bearing upon public health problems is carried out.

- (3) An Education Bureau, to which is attached a photographer and a draftsman.
- (4) A Chemical Laboratory in charge of a fully trained chemist whose duties comprise the chemical analysis of water samples and food stuffs.
- (5) A Public Health Equipment Depot which supplies Government Institutions, local bodies, etc., with reliable disinfectants, vaccine sera, etc.
- (6) A Public Health School, the staff of which is responsible for the training of health visitors. The Principal, who is also Inspectress of Health Centres, supervises the maternity and child welfare work throughout the province.
- In matters connected with sanitary works the Director of Public Health works in close touch with the Superintending Engineer, Public Health Circle, Punjab, who acts as technical adviser of the Public Health Department in engineering matters. This officer and the Director of Public Health are also the technical advisers of the Sanitary Board whose duty it is to examine and report upon sanitary schemes put forward by local bodies.

Burma.

mast, and between the Bay of Bengal on the West and South-West and Siam on the Southwest and South-west and Siam on the South-fast. Its area is approximately 261,000 acquare miles, of which 192,000 are under direct British Administration, 7,000 are unadministered and 62,000 belong to semi-independent Native States. The main geographical feature of the country is the series of rivers and bulls, running features. hills running fan-like from North to South with intertile valleys in between widening and flattening out as they approach the Delta Differences of elevation and rainfall produce great variations in climate. The coastal tracts of Arakan and Tenasserim have a rainfall of both 200 nother the Delta between the coastal tracts. about 200 inches, the Delta less than half that amount. The hot season is short and the monoon breaks early. The maximum shade temperature is about 96°, the minimum about 60°. North of the Delta the rainfall decreases rapidly to 30 inches in the central dry zone which lies in a "rain shadow" and has a climate resembl-ing that of Bihar. The maximum temperature is twenty degrees higher than in the wet zone, but this is compensated by a bracing cold season To the north and east of the dry zone lie the Kachin hills and the Shan plateau. The average elevation of this tableland is 3,000 feet with peaks rising to 9,000. Consequently it enjoys a temperate elimate with a rainfall of about 70 inches on the average. Its area is over 50,000 square miles. There is no other region of similar area in the Indian Empire so well adapted for European colonization. The magnificent rivers, the number of hilly ranges (Yomas, and the abundance of forests, all combine to make the scenery of Burma exceedingly varied and picturesque.

The People

The total population of Burma at the census of 1931 was 14,667,146. There were 9,092,214 Burmans, 1,037,406 Shans, 1,367,673 Karens, 153,345 Kachins, 348,994 Chins, 534,985 Arakanese and Yanbye, 336,728 Talaings and 138,739 Palaungs. There is also a large alter population of 193,594 Chinese and 1,017,825 Indians while the European and Angle Indians Indians, while the European and Anglo-Indian population numbered 30,441, and Indo-Burmans,

The Burmans, who form the bulk of the population, belong to the Tibetan group and their language to the Tibeto-Chinese family They are essentially an agricultural people, 80 per re essentially an agricultural people, 80 per cent of the agriculture of the country being in their hands. The Burmese and most of the hill tribes also, profess Buddhism, but Arimsm, or the worship of nature spirits, is almost Universal

In appearance the Burman is usually somewhat short and thick set with Mongolian

The Province of Burma lies between Assam round his waist, reaching to his ankles. The on the North-West and China on the North-Burmese women, perhaps the most pleasing type Burmese women, perhaps the most pleasing type of womanhood in the East, lead a free and open life, playing a large part in the household economy and in petty trading. Their dress is somewhat similar to the men's minus the silk kerchief on the head, and the longy is tucked in at the side instead of being tied in front. A well dressed and well groomed Burmese lady would, for grace and neatness, challenge comparison with any woman in the world.

Communications.

The Irrawaddy, and to a less exten the Chindwin, afford great natural thoroughfares to the country. At all seasons of the year these rivers, especially the Irrawaddy, are full of salling and steam craft. In the Delta the net-work or waterways is indeed practically the only means of communication The Irrawaldy flotilla Company, with a fine fleet of mail, cargo and ferry boats, gives the Irrawaddy and the Delta rivers and creeks a splendid river

The Burma Railways has a length 2,059.89 miles open line. The principal lines are from Rangoon to Mandalay, from Mandalay to Mytkylna, the most northern point in the system; the Rangoon-Prome line; and the Pequ-Martaban line, which serves Moulmein on the further bank of the Salween River.

Agriculture is the chief industry of the province and supports nearly three-fourths of the population The next total cropped area is 162 million acres of which nearly 1 million acres are cropped more than once. Irrigation works supply water to nearly 1½ million acres. India is very largely dependent on Burma for her supplies of kerosene, benzine and petrol which rank second to rice in order of importance. Teak wood is exported in large quantities from Burma to India.

Forests play an important part in the industrial life of the Province. The forest reserves cover some 34,793 square miles, while unclassed forests are estimated at about 1,81,697 square miles. Government extracts some 25,333 tons of teak annually, private firms, of whom the Bombay Burma Trading Corporation and Steel Brothers are the chief, extract over 4,20,085 tons. Other timber extracted by licensees amounts to 3,28,694 tons and firewood 10,28,396 tons.

Tin and wolfram are found chiefly in the Tayoy and Mergui Districts. Wolfram and tin are found together in most mining areas in Tavoy, the proportion varying from almost pure tin to almost pure wolfram. There has been an improvement in the price of tin.

The improvement in the output of tin and concenst snort and thick set with mongonau leatures. His dress is most distinctive and wolfram continues. The output in 1934 was exceedingly comfortable. It consists of a silk 315,705 tons as against 2943.62 tons in 1933. handkerchief bound round his forchead, a loose Silver, lead and zinc ore are extracted by the jacket on his body and a long skirt or longyi tied Burma Corporation at Bawdwin in the Northern

Shan States. Copper in small quantities is also found there. There are small deposits of Molybdenite in Tavoy and Mergui and of platinum in Mytikyina Mining ofor precious stones in the Mogok Stone Tract of the Katha District contimogok Stone Tractor the Natina Disarce valua-nined to be carried out by nativemmers working under Heenees. The output of jubies during 1934 was 21,810 carats as compared with 1,106 carats in 1933 The output of amber in 1934 was 3,696 cwt The output of Burmese Jadeite during 1934 compared with that of the previous year showed an increase of 923 137 cwts. The oldest and largest Orlfield in the province is at Yenangyaung in the Magwe District where the Burma Oil Company has its chief wells. There were increases in the output from the wells in the Venangyaung Oilfield and in the Minbu Thayetmyo, Upper Chindwin and Pakokku Inayethyo, topler thindwin and Tabokko Districts due to increased drilling operations in these areas. There were decreases in the output in the Chauk Orlfield and in the Kyaukpyn District due to the natural decline in the production of oil from existing wells. The outout of petroleum during 1934 exceeded that of 1933 by 57,59,172 gallons, the increase being mainly from wells in the Pakokku District and the Yenangyaung Oilfield of the Magwe District The increase in the Pakokku District may be ascribed to greater activity on the part of the Burma Oil Company and Butish Burma Petroleum Company at Yenaugyat, but more certocom company at renaugeat, but more especially to the development at Lanywa by the Indo-Petroleum Company. The Burma Oil Company take their oil to the refineries at Rangoon by pipe line from the Venangyaung and Singu Oilhelds. Other companies take it down by river flats. 18 109,353 acres

Manufactures.

There are 1,007 factories, more than half of which are engaged in milling rice and nearly one-seventh are sawmills. The remainder are, chiefly engineering works, cotton gunning mills, oil mills for the extraction of oil from groundnuts, printing presses, ice and aerated water factories, and oil refineries connected with the petroleum industry. The total number of persons employed in establishments under the Indian Factories Act in 1934 was 89,095. Perennial factories cmployed 40,967 and seasonal factories 48,128. At the Census of 1931, 1,850,176 or 29 79 per cent. or the total population were engaged outside agriculture and production

As is the case in other parts of the Indian Empire, the imported and factory made article is rapidly ousting the home-made and indigenous. But at Amarapura in the Mandalay District a revival has taken place of hand silk-weaving. Burmese wood-carving is still famous and many artists in silver still remain, the finish of whose work is sometimes very fine. Bassein and Mandalay parasols are well known and much admired in Burma. But perhaps the most famous of all hand-made and indigenous industries is the lacquer work of Pagan with its delicate patterns in black, green, and yellow traced on a ground-work of red lacquer over bamboo. A new art is the making of bronze figures. The artists have gone back to nature for their models, breaking away from the conventionalized forms into which their silver

work had crystallized and the new figures display a vigour and life that make them by far the finest examples of art the province can produce.

Administration.

Burma, which was originally administered as a Lieutenant-Governorship, was deliberately excluded from the operation of the Reform Act of 1919. It was felt that the Province differed so markedly from the other Provinces in the Indian Empire that its requirements should be separately considered. After repeated discussions the question was referred to a special Burma Reforms Committee, which in 1922 recommended that all the essential provisions of the Reform Act should be applied to the Province. This recommendation was accepted and its prophsals became law. Under this Act Burma became a Governor's Province, with an executive council and ministers, and conforms to the provinces recreated under the Act of 1919 (q v.). The main difference is in the size of the electorate. Under the franchise accepted, the rural electorate is estimated at 1,979,450 and the urban electorate has been put as high as 99,882. The Legislative Council consists of 103 members, of which 80 are elected and the balance nominated Owing to the special status of women in Burma, female franchise was adopted from the beginning.

Burma is divided administratively into Upper Burma (including the Shan States, the Kachin and Chin Hills) and Lower Burma. The Shan States are administered by the Chiefs of the States, subject to the supervision of the Commissioner, Federated Shan States, who is also Superintendent for the Southern Shan States, and the Superintendent of the Northern Shan States were formed into a Federation on the 1st October 1922, and are designated the F. S. States. The other Shan States in Burma are subject to the supervision of the Commissioner, Sagaing Division. The Civil, Criminal and Revenue administration is vested in the Chief of the State, subject to the restrictions contained in the sanad. The law administered is the customary law of the State.

Under the Governor are eight Commissioners of divisions, three in Upper, four in Lower Burma, and one in the Federated Shan States.

Justice.

The administration of Civil and Criminal Justice is under the control of the High Court of Judicature at Rangoon, which consists of a Chief Justice and ten other permanent Judges. The Superior Judicial Service consists of District and Sessions Judges; there are also separate Provincial and Subordinate Judicial Services,

All viliage headmen have limited magisterial powers and a considerable number are also invested with civil jurisdiction to a limited extent.

In pursuance of the policy of decentralization steps were taken in 1917 to restore to the village headmen the power and influence which they possessed in Burmese times before the centralizing tendencies of British rule made them practically subordinate officers of the administration.

Public Works.

The P.W.D. comprises two Branches, viz., the Buildings and Roads Branch and the Irrigation Branch.

The B. & R. Branch of this Department which is under the Ministry of Forests is administered by one Chief Engineer. There is also a Personal Assistant to the Chief Engineer. There are five permanent Superintending Engineers in charge of Circles, three of which are stationed at Rangoon and two at Maymyo. These are officers of the administrative rank.

Those of the executive rank are the Executive Engineers and Assistant Executive Engineers who number 24 (twenty four), including the Personal Assistant to the Chief Engineer, on the cadre of the Indian Service of Engineers Besides this there is also the Burma Engineering Service (Class I) which has been constituted for the purpose of gradually replacing the Indian Service of Engineers in the B & R. Branch, so far 18 appointments have been made to the latter service. There are 16 officers in service at present.

The Irrigation Branch of the P.W.D., which is under the control of the Hon'ble Finance is under the control of the Hon hie Finance Member, is administered by the Chief Engineer, P.W.D., Burma Irrigation Branch, who is assist-ed by a Personal Asstt. There are two perma-nent Superintending Engineers in charge of Circles, one of whom is stationed at Rangoon and the other at Maymyo. These are officers of the Administrative rank.

Those of the Executive rank are the Executive Engineers and Asst. Executive Engineers who number 17 on the cadre of the Indian Service of Engineers. Besides this there is also the Burma Engineering service, which is a Provincial Service.

Further, there is a River Training Expert On account of reduction of works due to the financial stringency the number of temporary Engineers recruited to augment the permanent staff has been reduced to one.

Police.

The Police Force is divided into Civil, Military and Rangoon Town Police. The first two are under the control of the Inspector-General of Police, the latter is under the orders of the Commissioner of Police, Rangoon, an officer of the rank of Deputy Inspector-General, one each for the Northern, Southern and Western Ranges, one for the Railway and Criminal Investments. Department, and one for the Military Police.

A special feature of Burma is the Military Police. Its officers are deputed from the Indian Army. The rank and file are recruited rom natives of India with a few Kachins Karens and Chins. The experiment of recruiting Burmese on a small scale has been successful. The organisation is military, the force being divided into battalions. The object of the force to supplement the regular troops in Burma. Their duties, apart from their military work, are to provide escorts for specie, prisoners, etc., July 1915 The Director is a member of the and guards for Treasuries, Jails and Courts. Indian Medical Service.

Education.

Under the Minister for Education there is the Director of Public Instruction with an Assistant Director, both belonging to the Indian Educational Service. There are eight Inspectors of Schools drawn from the Indian Educational Service, and the Burma Educational Service (class I) while the Burma Educational Service (class II) provides eight Assistant Inspectors. There is provides eight Assistant Inspectors. one Asstt. Inspector of School Physical Training, appointed on a Temporary basis. There is also one Inspectress of Schools. There is a Chief Education Officer for the Federated Shan States.

A centralized, teaching and residential University for Burma, has been established in Rangoon. It now provides courses in Arts, Science, Law, Education, Economics, Engineering, and Medicine.

English and A. V. Schools are controlled by the Education Dept. A remarkable feature of education in Burma is the system of elementary education evolved, g nerations ago, by the genius of the people. Nearly every village has a monastery (hooongy)-kvaung); every monastery is a village school and very Burman boy must, in accordance with his religion, attend that school, shaving his head and for the time wearing the yellow robe. At the hoongyi-kyaungs the boxs are taught reading and writing and an elementary native system of arithmetic. The result is that there are very few boys in Burma who are not able to read and write. Vernacular education is in the hands of Local Educational authorities.

Among special institutions, the Government Technical Institutc, Insein, provides courses in Mechanical, Civil and Electrical Engineering and the Agricultural College, Mandalay, courses in Agriculture. The Mary Chapman Training College for Teachers and School for the Deaf cysts in Rangoon and schools for the blind, at Moulmein and Rangoon.

A liberal scheme of State Scholarships provides for the despatch of 6 to 12 scholars to Europe each year.

Medical.

The control of the Medical Department is vested in an Inspector-General of Civil Hospitals Under him are 37 Civil Surgeons. There are also a Director of Public Health, two Assistant Directors of Public Health, the senior of whom is also Director, Public Health Institute, at which there is now a Public Analyst (which post is at present held in abeyance for purposes of economy) and to which is also attached a Malaria Bureau. There are also an Inspector-General of Prisons, three whole-time Superintendents of Prisons, a Chemical Examiner and Bacteriologist and a Superintendent of the Mental Hospital. There is also a post of Hygienne Publicity Officer, which for the present is held in abevance.

THE FUTURE OF BURMA.

Throughout the discussions on the Indian Reorms proposals the question of Burma's future ecupied a secondary position, as nothing could be definitely settled until the Burmans themselves lecided whether they would join the proposed ill-India Federation and shale the lot of the ndian provinces, or become a separate unitary ntity with constitutional advance analogous o that conferred on India, subject to similar afeguards—It was thought that a new election o the Burma Legislative Council would give he electorate an opportunity to express itself in this question. The election was held and esulted in a majority for the antiseparationists When, however, the new Council was called non to give a straight answer to the question reparation or Federation on the lines of is Majesty's Government's proposals it delined to do so. A large number of resolu-ions were tabled, but not one of them proyided elear indication of the people's mind. Even he anti-separationists did not vote for Federaion, but expressed a desire to cast their lot vith India as an experimental measure, reserving the right to withdraw from the Federation it a later date. Several adjournments were granted to enable the parties to arrive at a ompromise resolution and, after the Governor and refused further to prolong the sittings, which had lasted several days, the special ession of the Council was prorogued.

If Burma herself gave an inconclusive verdict he British (lovernment could not remain idle, hat would have been unfair both to India and Burma Therefore, a few months later (in August) Sir Samuel Hoare presented to the loint Parliamentary Committee a memoranium embodying Government's proposals for he future constitution of Burma it it were lecided to separate Burma from India. He, lowever, made it clear that if the Joint Comnittee decided that Burma should be included the Indian Federation, the proposals of the White Paper (subject to consequential idjustments) would apply to Burma in the same way as they would apply to any other province of India. As the Burma Council had refused to choose separation on the basis of the constitution outlined by the Premier, he suggested that the Committee should invite some Burma epresentatives for consultation to assist in determining which of the two courses would be in the best interests of Burma Assuming that Burma was to be separated, he outlined a scheme; of constitutional advance under which executive authority in a unitary Burma would vest in the Governor, who would also be the Commander-in-Chief. He would himself direct and control the administration of finance, external aftairs, ecclesiastical affairs, monetary policy, currency, coinage, and matters connected with scheduled areas. Other subjects would be administered by Ministers elected by, and responsible to, the Council. The Legislature would be bicameral.

Shortly after the submission of this memorandum Sir Samuel expressed the opinion that an overwhelming body of Burmans had

supported separation from India. He added that Burma could not be granted the right of secession, as it would be a bad precedent and would be fatal to Federation.

In pursuance of the policy of giving Burmans the fullest opportunity to determine the future form of their constitution, the Joint Parhamentary Committee decided in November to invite twelve representative Burmans for consultation. A prolonged discussion took place in December, in which both sides freely ventilated their respective points of view. "The result of the elections to the special session of the Burma Council should be construed as a vote against separation"; "There are no two opinions in Burma, all are for separation, the so-called federationists are also for separation—but after a time" These were the conflicting views expressed in London on behalf of His Majesty's Government, Sir Samuel made it plain that Britain had no axe to grind and that she was actuated solely by the desire to do the best for Burma. The controversy was set at rest by the publication of the report of the Joint Parhamentary Committee (see Joint Parhamentary Committee section) which provided for the separation of Burina and the establishment of a separate unitary constitution to Burma.

The Joint Pathamentiary Committee's Report, was discussed by the Burma Legislative Council, which rejected a motion opposing separation and rejecting the constitution proposed by the Committee A proposal favourable to the immediate grant of Dominion Status to Burma was carried

Shortly after the publication of the J. P. C. Report, which covered Buina also, representatives of the Burnan and Indian Governments entered into negotiations to settle the future financial and commercial relations between the two countries. These negotiations resulted in an agreement maintaining the status quo for a period of five years, a proposal to allow a certain latitude for low revenue duties having been abandoned. Commenting on this agreement in the House of Commons, Sir Samuel Hoare advised representatives of British trade not to ask for any special sateguards for British trade and industry at the present stage on the ground that any attempt to obtain concessions which the Indian and Burman Governments were unwilling to offer of their own accord would adversely affect British trade with India.

A tribunal was also appointed to advise the Secretary of State on the formulation of a just financial settlement between India and Burma. The tribunal's report was published in May, 1935. Taking the figures up to the year ending March, 1933, the Tribunal declared, that on the basis of \$\frac{1}{2}\$ per cent interest. Burma would pay India over two crores of rupees annually for 45 years to redeem principal and interest.

THE FINANCES OF BURMA.

In common with the other Provinces of India, the financial arrangement between the Government of India and the Government of Burma underwent a remodelling in consequence of the reconstitution of the Province on the lines of the other Indian Provinces. The Province obtained substantial financial independence. The present position is set out in the following statement—

Bihar.

As in the case of Bombay Presidency, the rovince known intherto as Bihar and Orissa as suffered a territornal diminution owing to be constitution of the Orissa Division as a sparate province. The following details three reappertain to the new Bihar province after he separation of Orissa as from April 1, 1936.

Hihar lies between 20°-30' and 27°-30' N. attude and between 82°-31' and 88°-28' E. ongitude and includes the provinces of Bihar and Chota Nagpur, and is bounded on the north by Nepal and the Darjeeling district if Bengal; on the east by Bengal and the Bay of Bengal; on the south by the new province of Orissa, and on the west by the United Provinces of Agra and Oudh and the Central Provinces

The arca of the territories which constitute the Governorship of Bihar is 69,348 square niles The States in Chota Nagpur which vere included in the Province have since the st April 1933 been transferred to the control of the Agent to the Governor-General, Eastern states and no longer form part of the Province. l'hota Nagpur is a mountainous region which separates them from the Central Indian Plateau. Bihar comprises the valley of the Ganges from the spot where it issues from the erritories of the Governor of the United Provinces of Agra and Oudh till it enters Bengal near Rajmahal. South of Bihar lies Chota Following the main geographical lines there are four Civil Divisions with headquarters at Patna, Muzaffarpur (for Tirhut), Bhagalpur and Ranchi (for Chota Nagpur). The headquarters of Government are at Patna. The new capital which lies between the Military Cantonment of Dinapore and the old civil station of Banklpore is known as "Patna," the old town being called "Patna City."

The People.

The Province has a population of 32,371,000 persons. Even so with 467 persons per square mile, Bihar is more thickly populated than Germany. There are only four towns, which can be classed as citize, namely, Patna, Gaya, Jamshedpur and Bhagalpur. During the last ten years the population of Patna has been steadily increasing. Hindus form an overwhelming majority of the population. Though the Muhammadans form about one-tenth of the total population they constitute more than one-fifth of urban population of the province Animists account for 5.9 per cent. These are inhabitants of the Chota Nagpur plateau and the Santal Parganas, the latter district being a continuation of the plateau in a northeasterly direction.

Industries.*

The principal industry is agriculture, Bihar, more especially North Bihar, being the "Garden of India." Rice is the staple crop but the spring crops, wheat, barley, and the like are of considerable importance. It is estimated that the normal area cultivated with rice is 15,094,000 acres or about 48 per cent. of the cropped area of the Province. Wheat is grown on 1,221,800 acres, barley on 1,307,400 acres, maize or Indian-corn on 1,697,300 the latter being an autumn crop. Oil-seeds are an important crop, the cultivation having been estimated by the demand for them in Europe. It is estimated that 1,820,800 acres of land are annually cropped with oil-seeds in the Province. There is irrigation in Shahabad, Gaya, Patna and Champaran districts. The Indigo industry is steadily on the decline, the total area sown having decreased from 342,000 acres in 1896 to 500 acres in 1933. The principal cause of this was the discovery of the possibilities of manufacturing synthetic or chemically prepared indigo on a commercial scale. Its place as a crop manufactured for export has been largely taken by sugarcane, the cultivation of which has been considerably extended owing to the high prices given by sugar factories. In the district of Purnea and parts of the Tirhut Division jute is grown, but the acreage varies according to the price of jute. The last serious famine was in 1895-96, but there was a serious shortage of foodstuffs in the south of the Province in 1919. In any year in which monsoon currents from either the Bay of Bengal or the Arabian Sea are unduly late in their arrival or cease abruptly before the middle of September the agricultural situation is very grave. It may be said that for Bihar the most important rainfall is that known as the hatia, due towards the end of September or up to middle of October. Rain at this time not only contributes materially to an increased outturn of the rice crop, but also provides the moisture necessary for starting the spring or rabi crops.

Manufactures.

Opium was formerly, with indigo, the chief manufactured product of Bihar, but in consequence of the agreement with the Chinese Government the Patna Factory has been closed. At Monghyr the Peninsular Tobacco Company have erected one of the largest cigarette factories in the world and as a result tobacco is being grown much more extensively. The Tata Iron and Steel Works at Jamshedpur in Singhbum district are also one of the largest in the world and numerous subsidiary industries are springing up in their vicinity. The most important of these are the Tinplate Company of India, Agricultural Implements, Léd., Enfield

The figures given in this paragraph relate to British territory only.

Bihar. 121

Cable Company of India, Enamelled Ironware, though the limit may be extended to Rs. 4,000. Limited, and Indian Steel Wire Products. The On the criminal side the Sessions Judge hears population of Jamshedpur is rapidly approach appeals from Magistrates exercising first class ing 100,000 and it consumes 1 million tons of coal annually. This part of the province has also some of the richest and most extensive iron mines in the world and supplies the iron and steel works in both Bengal and Bihar with raw materials, but the raising of coal is still the most important of the mineral industries in the province. The coalfields in the Manbhum District have undergone an extraordinary development in the past twenty years, while valuable new fields are being developed at Ramgarh, Bokaro and Karanpura in Hazaribagh This same district is the most inportant mica mining centre in the world both on account of the quality as well as the size of its output. Manbhum, Palamau, Ranchi, the Santal Parganas and Gaya are also the chief centres for the production of lac and the manufacture of shellac, the latter of which is exported from India to the value of ten crores annually.

Administration.

The Province on first constitution was administered by a Lieutenant-Governor-in-Council, thus being unique in India as the only Lieutenant Governorship with a Council. Under the Reform Act of 1919 it was raised to the status of a Governorship, with an Executive Council and Ministers. The principles of the provincial administration are fully explained elsewhere. The Provincial Governorships, where the division of the administration into Reserved Subjects, in charge of the Governor and his Executive Council, and Transferred Subjects, in charge of the Governor and Ministers chosen from the Legislative Council, is set out in detail. In all these respects Bihar is on the same plane as the other Provinces in India.

Public Works.

The Public Works Department in the Province of Bihar consists of two separate branches, viz.:—(1) the Buildings and Roads which includes Railways and (2) Irrigation, which includes the Public Health Engineering Branch. Each has a Chief Engineer, who is also Secretary to the Local Government with an Engineer Officer as Under-Secretary in while an Engineer Oncer as Under-Secretary in the Buildings and Roads branch and a non-pro-fessional Assistant Secretary and a Deputy Chief Engineer in the Irrigation branch under him The Electrical work of the Province is carried out by an Electric Inspector and Electrical Engineer and a staff of subordinates.

Justice.

The administration of justice is controlled by the High Court of Judicature at Patna. In the administration of civil justice at Patna. In the administration or civil justice below the High Court are the District Judges as Courts of Appeal, the Subordinate Judges and the Munsiffs. The jurisdiction of a District Judge or Subordinate Judge extends to all original suits cognizable by the Civil Courts. It does not, however, include the powers of a Small Cause Court, unless these be specially conferred. The ordinary jurisdiction of a Munsif extends to all

appeals from Magistrates exercising first class powers while the District Magistrate is the appellate authority for Magistrates exercising second and third class powers. The District Magistrate can also be, though in point of fact he very rarely is, a court of first instance. It is usual in most districts for a Joint Magistrate or a Deputy Magistrate to receive complaints and police reports, cases of difficulty or importance being referred to the District Magistrate who is responsible for the peace of the district. In the responsible for the peace of the district. In the non-regulation districts the Deputy Commissioner and his subordinates exercise civil powers and bear rent suits

Land Tenures.

Estates in the Province of Bihar are of three kinds, namely, those permanently settled turee kinds, namely, those permanently settled from 1793 which are to be found in the Patna, Tithut and Bhagalpur divisions, those temporarily settled as in Chota Nagpur and estates held direct by Government as proprietor or managed by the Court of Wards, The passing of the Bengal Tenancy Act (VIII of 1885) safeguarded the rights of the cultivators under the Parmaner Settlemant Act cultivators under the Permanent Settlement Act. Further, the Settlement Department under the supervision of the Director of Land Records makes periodical survey and settlement opera-tions in the various districts both permanently and temporarily settled. In the former, the rights of the undertenants are recorded and attested, while in the latter there is the re-settlement of rents. In the re-settlement proceedings, rents are fixed not only for the landlords but also for all the tenants. A settlement can be ordered by Government on application made by landlords or tenants.

In Chota Nagpur and the Santal Parganas' the rights of village headmen have been recognised. The headman collects the rents and is responsible for them minus a deduction as remuneration for his trouble.

Chota Nagpur has its own Tenancy Act. In the district of the Santal Parganas, the land tenures are governed by Regulations III of 1872 and II of 1886.

Police.

The Departments of Police, Prisons and Registration are each under the general direction of Government, supervised and inspected by an Inspector-General with a staff of assis-tants. The Commissioner of Excise and Salt is also Inspector-General of Registration.

Under the Inspector-General of Police are four Deputy Inspectors-General and 30 Super-intendents. There are also 25 Assistant Super-intendents of Police and 29 Deputy Superintenintendents of Police and 29 Deputy Superintendents. The force is divided into the District Police, the Railway Police and the Military Police. A Criminal Investigation Department has also been formed for the collection and distribution of information relating to professional criminals and criminal tribes whose operations extend beyond a single district and to control, advise, and assist in investigasuits in which the amount or value of the subject tions of crime of this class and other serious matter in dispute does not exceed Rs 1,000 action which its assistance may be invoked. There are three companies of Unmounted | Military Police and one company of Mounted | Military Police which are maintained as reserves to deal with serious and organised disturbances and perform no ordinary civil duties. There are also five platoons of armed police stationed at Patna to serve as a provincial reserve.

Education.

The position of education in the Province, with the numbers attending schools, is set out in the section Education and the tables attached thereto (q. v.) showing in great detail the educational status of the administration.

There is a University at Patna, whose functions are described under the Indian Universities, (q. v.)

Medical.

The Medical Department is under the control of the Inspector-General of Civil Hospitals who is a Member of the Indian Medical Service. Under him there are 21 Civil Surgeons who are responsible for the medical work of the districts at the headquarters of which they are at Patna has been transferred to Darbhanga,

stationed. 60 Dispensaries are maintained by Government in addition to 626 Dispensaries maintained by Local bodies, Railways, private persons, etc. 7,089,290 patients including 70,909 in-patients were treated in all the dispensaries in 1933. The total income of the dispensaries in 1933. saries maintained by Government and Local Bodies including that of the private aided institutions amounted to Rs. 32,39,058.

A large mental hospital for Europeans has been opened at Ranchi which receives patients from Northern India. A similar institution for Indians has been opened at Ranchi since September 1925 for the treatment of patients from Bihar and Bengal. A sanitorium at Itki in the district of Ranchi has also been established for the treatment of tuberculosis. An institute for radium treatment has also been established at Patna. Centres for anti-rabic treatment have been started at Patna.

A medical college has been opened at Patna and the Medical School which was in existence

The finances of the province have undergone a change owing to the separation of Orissa from Bihar, so that it is not possible to give correct budget figures for Bihar for the year 1936-37.

ADMINISTRATION.

GOVEI NOR.

His Excellency Sir James David Sifton, K C S I . KCIE., ICS.

Orissa.

lake Sind, Orissa was constituted a separate brownee on Aprill 1936. It Sind was a separate 2 ographical ethnological and Inguistic unit uside the administrative boundary of Bombay Presidency, the new province of Orissa is the esult of the annalgamation of various Oriya peaking peoples who had till then belonged to three separate provinces, viz., Bihar and Orissa, Maduas and the Central Provinces.

the Oriyas are an intensely patriotic people who bein great love for their culture and language, they have always opposed any move to disminisher the Oriva-speaking tracts for political 1 administrative considerations. The Oriyas care their traditions far back to the days of Mahabharata when there was the ancient lingdom of Utkal embracing a wide territory now known as Orissa Through successive conquests and annexations in known history in Orivas passed through varying fortunes, until

at the time of the Moghill complest the Orissa country was broken up and the people gradually lost race consciousness, although common language and literature continued to act as a link

Race consciousness was revived with the spirit of education under the British regime and after the great famine of 1866. Sir Stayoid Northcote suggested the separation of Orissa from Bengal The proposal was turned down, but the patriotic fervour underlying the new move persisted and gave rise to a series of demands.

History of Separation.

The agitation for the unification of Oriya tracts first obtained official recognition in 1903 when the Government of India accepted the principle of bringing in the scattered sections administration About the same time, there was to be recognised at the Round Table Conference brought into existence the Utkal Union Conference, which has since carried on a sustained agitation to unify the Oriyas

The first stage success was achieved in 1912 when an area of modern Orissa was separated from Bengal and amalgamated with Bihar to torm what came to be known as the province of Bihar and Orissa Although the status of much better than before, the advocates of Onya unity continued to press their claim for the tormation of Orissa into a distinct admini-strative unit. The late Mi Montagu and Loid Chelmstord saw the justice of the Oriyas' claim and generally tavoured the redistribution of provinces on a linguistic basis for the success of responsible government They left it, however, to the provincial governments concerned to tormulate opinions and make concrete proposals In January 1936, an Order-in-Council was atter the advent of the Montfold constitution issued by His Majesty's Government constituting ın 1920

The Bihar and Orissa Legislative Council endorsed the idea of amalgamation, but the Madras Council held an inconclusive debate The Madras Government was against the surrender of any of its territory, while the C.P. Government had an open mind.

The Government of India then appointed what is called the Phillp-Duff Committee to make local manifies with a view to ascertaining the attitude of Oriva speaking people in the north of Madras Piesidency on the question of their union with Orissa Messis C. L. Philip and A. C. Duft reported that there was "a genuine, long standing and deep scated desire on the part of the educated Oriva classes of the Oriva speaking tracts for amalgamation of these tracts with Orissa under one administration

The next stage came with the appointment of the Sunon Commission in 1927. A subcommittee of the commission presided over by Major Attlee recommended the creation of a separateadministrative unit for Orissa, agreeing with the Oriyas contention that under the by a purely advisory council autonomous conditions proposed by the Commission, the Orivas would be an ineffective minority in Madias, Bengal, Bihai and Orissa and the C P

Round Table Conference.

When the idea of a tederation of autonomous units dawned at the first Round Table Conference the Oriyas' demand was presented in a crystallised torm by the Maharaja (then Raja) of Parlakimedi, who asked for a separate province for Orissa "We want a province of province for Orissa "We want a province of our own," he said, "on the basis of language and race so that we can be a homogenous unit with feelings of contentment and peace, to realise, and be benefited by, the projected reforms and look to ward to the day when the race.

The Oriyas' demand derived adventitions support from the strength of the Muslim claim for the constitution of Sind as a separate province Those who backed up the case of Sind could not new province of Orissa:-

of the Oriya speaking population under a single loppose Oriyas' claim, which, therefore, came

In September 1931, the Government of India appointed the O'Donnell Committee to examine and report on the financial and other consequences of setting up a separate administration ior Orlssa and to make recommendations regarding the boundaries in the event of separation The Committee recommended the creation of a new province including the Orissa division, Angul, Orissa in the province of Bihar and Orissa was the Khaiiai Zamindaii of the Raipur district and the greater part of the Ganjam district and the Vizagapatam agency tract According to the Committee, the new Orissa province was to have an area of 32,681 square inles and a population of about 81,74 000 persons. On the question of financial and other consequences of separation, the Committee made recommendations generally on the lines of the Sind Committee

> the Orissa as a separate province to be brought into line with other provincial units when Provincial Autonomy is mangurated under the Government of India Act of 1935

> Order confers on Orissa the full status of a Governor's province to which all the provisions of the Act of 1935 will be applied when provincial autonomy becomes an accomplished fact

Meanwhile, as from April 1, 1936, until part III of the Government of India Act, 1935, is brought into force, the province will be under the administration of the Governor—The M. L. Cs. who represented the Oriva speaking places in the Legislative Councils of Biliar and Orissa, Madras and the C P cease to be members of these Connels as from April 1 Such portions of the Government of India Act of 1919 which apply to the Provincial Legislative Councils to Ministers and to the division of provincial subjects into transferred and reserved subjects will not apply to the new province during the transitional period. The Governor will be assisted in the administration of the province

The Order-in-Council makes elaborate provisions to the apportionment of financial assets and habilities arising out of the dismemberment of parts of Bihar and Orissa, Madras and the Central Provinces and their amalgamation with new Oussa These differ in their application to the three older provinces, but the principles underlying all three are the same, land, torests buildings, works and properties pass to the province in which they are situated. Arrears of taxes will belong to the province in which the taxed property is situated or the taxed transactions took place Of the outstanding Bihar and Oussa urigation debt incurred before April 1, 1921, Rs 2,56,85,136 will be the debt of Orissa and the remainder that of Bihar reforms and look totward to the day when the Orissa assumes, and Madias will be released United States of India will consist of small from the liability for Rs 47.07,008 of the Outfederated States based on common language and standing Madras Irrigation debt incurred before April 1, 1921

Extent of Province.

The following are the areas comprised in the

- 1 That portion of the Province of Bihar and Orissa which was known as the Orissa Division thereof
- 2 Areas transferred from the Presidency of Madras
 - (i) The Ganjam Agency Tracts;
- (ii) The following areas in the non-Agency portion of the Ganjam district, viz, the talukof Ghumsur, Aska, Surada, Kodala and Chetrapur, so much of the taluks of Ichapur and Berliampur as lies to the north and west of the boundary line;
- (iii) So much of the Parlakmedi Estate as lies to the north and east of the said line, and
- (w) The following areas in the Vizagapatam district, that is to say, the Jeypore (Impartible) Isstate and so much of the Pottangi taluk as is not included in that estate.
- 3 Areas transferred from the Central Provinces:—
- (1) The Khariai Zamindari in the Raipui district, and
- (a) The Padampur Tract in the Bilaspur district, that is to say, the detached portion of that district consisting of 54 villages of Chandrapur-Padampur estate and also of the following 7 villages, viz, Kuhakunda, Badimal, Panchpudgia (Soda), Barliampura (Malguzuri), Panchpuragia (Palsada), Jogni and Thakurpal, (Jogni) **

Agriculture.

Agriculturally and industrially, Orissa is a backward region It has suffered as the result of being tacked to one or other of many provinces tor administrative purposes. This explains why there are no big factories on Orissa although there are a large number of indigenous cotton industries bespeaking the people's artisanship Among the cottage industries may be mentioned handloom industries, brass, bell metal, silver filigree, cutlers, wood and paper pulp and horn articles Sugarcane and inte are two important commercial crops in Orissa, and areas under both these are already increasing. The Orissa brests can supply a large quantity of valuable timber and fuel. Fisheries too are an important industry of Orissa. The two valuable sources of supply are the extensive Chilka lake and Puri where on an average 9,000 maunds of cured fish and 50,000 maunds of uncured fish respectively are exported to Calcutta every

The chief immeral resources of Orissa are non-coal, hinestone, managarese and mica. Iron out is mostly touid in Mayurbhan Kuonjo Bonai, all feudatory States. The deposits in this area are remarkable for the enormous mantity of extremely rich one they contain More than 60 per cent, of the ore extracted in More than 60 per cent, of the ore extracted in their is a ready demand from the Tata Iron and Steel Works in Jamshedpur and Messis, Bird & Co of Calcutta. Orissa cannot boast of such Mensive coal mines as those of Bengal and

Bihar, but coal has been found in Angul. Sambalpin and in the feudatory states of Gangpin. Talcher and Athmallik Talcher has the largest coalfields and they are being progressively exploited. Their output increased from 38,237 tons in 1928 to 316,539 tons in 1934

Administration.

Sir John Hubback who has been chosen to be the first Governor of the infant province of Orrsaa, has had wide experience in the province of Bihar and Orrsaa, and has been actively associated with the hir of the people of Orrsaa. The appointment has proved very popular and the province is eagely looking tolward to an intensive period of all round development under the able and sympathetic guidance of Sir John Hubback.

THE BUDGET FOR 1936-37.

The first budget of the new Orissa Province was presented in May and was based mainly our known sources of revenue and expenditure plus fresh heads necess-rated by the creation of the new province. For purposes of the budget new schemes intended to develop the province were left out of account and deterred till Orissa was in a position to pay for them.

The bidget estimated a revenue deficit of Rs 40 lakhs and in order to cover this difference, to allow for certain item of non-recurring expenditure and to provide for a road fund and a famine relief tund, the Government of India gave a grant of Rs, 50 lakhs. This sum was in addition to Rs. 1½ lakhs already granted to finance the purchase of turniture and other office equipment for the new administration.

That the administrators of the province were determined to balance its finances was obvious from the decision announced in the budget that the Governor would not appoint any Ministers for the transitional period but would if necessity arose, consult a commutee of the Advisory Council. The saving effected by this self-denial amounted to a little over Rs. 80,000. It was anticipated that some saving would also be effected by the postponement of appointments to the others of the Deputy Director of Hospital and Assistant Director of Public Health.

Faced with the problem of providing Rs 55,000 under the head "Medical" and Rs 35,000 under the head "Public health", the new administration managed to effect a saving of Rs. 35,000, in spite of the necessity to provide for drainage in Koraput, (a prospective district headquarters), so that they had still to find Rs 55,000.

The budget also provided for the building and equipment of the Bacteriological Laboratory in Orissa at a cost of Rs. 71,000. It was expected that a saving of Rs. 10,000 would be made under the head. "Civil Works."

Inductions from these areas of Orissa for which the result, as the Chief Secretary pointed the results as ready demand from the Tata Iron and cout, "It is probable that in the budget, as finally steel Works in Jamishedpur and Messrs, Bird authenticated, the estimated closing balance of Co of Calcutta. Orissa cannot boast of such the steel of the country of the cou

The Central Provinces and Berar.

great triangle of country midway between Bombay and Bengal Their area is 133,069 sq. miles, of which 82,149 are British territory proper, 17,808 (vz. Berar) held on perpetual lease from H E H the Nizam and the remainder held by Feudatory Chiefs. The population (1931) is 15,507,723 in C. P British Districts and Berar Various parts of the Central Provinces passed under British control at different times in the wars and tumult in the first half of the 19th century and the several parts were amalgamated after the Mutiny, in 1861, into the Chief Commissioner-ship of the Central Provinces Berar was, in 1853, assigned to the East India Company as Part of a financial arrangement with H.E.H. the Nizam for the maintenance of the Hyderabad Contingent, and was leased in perpetuity to the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Mississipping of the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Mississipping of the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Mississipping of the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Mississipping of the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Mississipping of the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Mississipping of the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Mississipping of the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Mississipping of the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Mississipping of the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Mississipping of the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Mississipping of the Central Provinces in 1903, as the result of a fresh agreement with H.E.H. the Mississipping of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the result of the Central Provinces in 1903, as the Central Provi fresh agreement with H.E.H. the Nizam.

The Country.

The Central Provinces may roughly be divided into three tracts of upland, with two intervening ones of plain country. In the northwest, the Vindhyan plateau is broken country, covered with poor and stunted torest its precipitous southern slopes stretches the rich wheat growing country of the Nerbudda valley. Then comes the high Satpura plateau, characterised by forest-covered hills and deep water-cut ravines. Its hills decline into the Nagpur plain, whose broad stretches of "deep" black cotton soil make it one of the more important cotton tracts of India and the wealthlest part of the C P. proper. The Eastern half of the plain lies in the valley of the Wainganga and is mainly a rice growing country. Its numerous irrigation tanks have given it the name of the "lake country" of Nagpur. Further east is the far-reaching rice country of Chattisgarh, in the Mahanadi basin. The southeast of the C. P. is again mountainous, containing 24,000 square miles of forest and precipitous ravines, and mostly inhabited by jungle tribes. The States of Bastar and Kankar lie in this region. Berar lies to the south west of the C. P. and its chief characteristic is its rich black cotton-soil plains.

The People.

The population of the province is a comparatively new community. Before the advent of the Aryans, the whole of it was peopled by Gonds and other primitive tribes and these aborginal inhabitants fared better from the Aryans than their like in most parts of India because of the rugged nature of their home But successive waves of immigration flowed into the province from all sides. The early inhabitants were driven into the maccessible forests and hills, where they form nearly a quarter of the whole population of the Central Provinces being found in large numbers in all parts of the by the language divisions of the province. Hindi the working population is female.

The Central Provinces and Berar compose a brought in by the Hindustani-speaking peoples eat triangle of country midway between Bom-Marathi in Beiar and the West and Centre of the Central Provinces Hindi is spoken by 56 per cent, of the population and is the lingua franca Marathi by 31 per cent and Gondi by 7 per cent The effects of invasion are curiously illustrated in Berar, where numbers of Moslems have Hindu names, being descendants of for-mer Hindu officials who on the Mahomedan invasion adopted Islam rather than lose their positions The last census shows that a gradual Brahmanising of the aboriginal tribes is going The tribes are not regarded as impure by the Hindus and the process of absorption is more or less civilising.

Industries.

When Sir Richard Temple became first Chief Commissioner of the C. P. the province was landlocked. The only road was that leading in from Jubbulpore to Nagpur. The British administration has made roads in all directions, the two trunk railways between Bombay and Calcutta run across the province and in the last few years a great impetus has been given to the construction of subsidiary lines. These developments have caused a steady growth of trade and have aroused vigorous progress in every department of life. The prime industry is, of course, agriculture, which is assisted by one of the most admirable agricultural departments in India and is now receiving additional strength by a and is now receiving additional strength by a phenomenal growth of the co-operative credit movement. The land tenure is chiefly on the malguzari, or landlord system, ranging with numerous variations, from the great Feu datory chief ships, which are on this basis, to holdings of small dimensions. A system of land legislation has gradually been or iand legislation has gradually been built up to protect the individual cultivator. Berar is settled on the Bombay raiyatwari system. 16,073 square miles of the C. P. is Government Reserved forest, in Berar the forest area is about 3,339 square miles, the total fewer area business. total forest area being one-sixth of the whole Province. The rugged nature of the greater part of the country makes forest conservation difficult and costly. Excluding forest and waste 67 per cent of the total land recupied for cultivation; for the two most advanced districts in the Central Provinces, the proportion averages 83 per cent, while the average figure for the Berar Districts is as high as 93 per cent. The cultivated area has extend-ed almost continuously except for the tempor-ary checks caused by bad seasons. Rice is the most extensive single crop of the Central Provinces, covering nearly 30 per cent of the cropped area Wheat comes next with over 15 per cent then pulses and other cereals used for food and oil-seeds with nearly 50 per cent, and cotton with over 7 per cent. In Berar cotton occupies 46 per cent Next comes juar and then pulsebeing found in large numbers in all parts of the and other cereals and oil seeds of the cropped province, particularly in the South-east. The area, jowar covers 31 per cent, then when main divisions of the newcomers are indicated and oilseeds. In agriculture more than half

Commerce and Manufactures.

Industrial life is only in its earliest development except in one or two centres, where the introduction of modern enterprise along the ailway routes has laid the foundations for great luture developments of the natural wealth of the province. Nagpur is the chief centre of a Jusy cotton spinning and weaving industry. The Empress Mills, owned by Parsi manuacturers, were opened there in 1877 and the zeneral prosperity of the cotton trade has led to the addition of many mills here and in other parts of the province. The total amount of Indian varn exported from the Province during the years 1933-34 and 1934-35 was 1,49,608 and 1,42,328 maunds, respectively.

The largest numbers engaged in any of the The largest numbers engaged in any of the modern industrial concerns are employed in manganese mining which in 1934 employed ,,005 persons and raised 1,86,025 tons. Then ollow coal mining with an output of 1,438,850 tons and 12,408 persons employed, the Jubbul-Dore marble quarries and allied works, the limestone quarries and the mines for pottery clay, oapstone, etc.

The total number of factories of all kinds egally so described was 972 in 1934 the latest period for which returns are available and the number of people employed in them 60,503 The same economic influences which are opeative in every progressive country during its transition stage are at work in the C. P. and Berar, gradually sapping the strength of the old village industries, as communications improve, and concentrating industries in the towns. While he village industries are fading away, a large levelopment of trade has taken place. The last levelopment of trade has taken place. pre-war reports showed an increase in volume by one-third in eight years.

Administration.

The administration of the Central Provinces and Berar is conducted by a Governor-in-ouncil, who is appointed by the Crown. He s assisted by seven Secretaries and four underscretaries. Under the reform scheme the admi-11-tration is conducted by a Governor with in Executive Council of two members, one of whom is a non-official and two Ministers, he latter being in charge of the transferred

The local legislature consists of 73 members intributed as follows:—38 elected from the P., 17 elected from Berar; 2 members of the Executive Council; 8 nominated non-officials; nominated officials. The Governor (who is not a member of the Council) has the right of commating two additional members with special knowledge on any subject regarding which legislation is before the Council. The C. P. He divided for administrative purposes into have divisions and Berar constitutes a invision Each of these is controlled by a Commissioner. The divisions are sub-divided into istricts, each of which is controlled by a Deputy ommissioner, immediately subordinate to the

manissioner. The principal heads of Pro-outeral departments are the Commissioner of withement and Director of Land Records, the

the Inspector-General of Prisons, the Director of Public Instruction, the Excise Commissioner and Superintendent of Stamps and Inspector General of Registration, and Registrar-General of Births, Deaths and Marriages, the Director of Agriculture, the Registrar of Co-operative Societies, the Director of Industries, the Legal Remembrancer, the Director of Veterinary Services and a Chief Engineer, Public Works Department, Buildings and Roads and Irrigation Branches. The Deputy Commissioners of districts are the chief revenue authorities and District Magistrates and they exercise the usual powers and functions of a district officer. The district forests are managed by a forest officer, over whom the Deputy Commissioner has certain powers of supervision, particularly in matters affecting the welfare of the people Each district has a Civil Surgeon, (except Mandla, Drug and Balaghat where there are Assistant Surgeons) who is generally also Superintendent of the District Jail except at Central Jails at Nagpore and Jubbulpore and District Jalis at Raipur, Naranghpur, Amraoti and Akola where there are whole time Superintendents and whose work is also in various respects supervised by the Deputy Commissioner. The Deputy Commissioner is also Marriage Registrar and manages the estates of his district which are under the Court of Wards In his revenue and criminal work the Deputy Commissioner is assisted by (a) one or more Assistant Commissioners, or members of the Indian Civil Service; (b) one or more Extra Assistant Commissioners, or members of the Provincial Civil Service, including a few Anglo-Indians and (c) by Tahsildars and Naib Tahsildars, or members of the Subordinate service- The district is divided for administrative purposes into tabsils, the average area of which is 1,500 square miles In each village a lambardar or representative of the proprietary body is executive headman.

Justice.

The Court of the Judicial Commissioner was the highest court of appeal in civil cases, and also the highest court of criminal appeal and revision for the Central Provinces and Berar including proceedings against European British subjects and persons jointly charged with European British subjects.

Quite recently the Secretary of State for India approved the proposal for the establishment of a High Court in the Central Provinces and Berar and Sind and a High Court has since January 1936 been established at Nagpur.

Subordinate to the High Court are the District and Sessions Judges (9 in number) each of whom exercises civil and criminal jurisdiction in a Civil and Sessions district comprising one or more Revenue districts. The civil staff below the District and Sessions Judge consists of Subordinate Judges of the first and second class.

Local Self-Government.

Municipal administration was first introduced under the Punjab Municipal Acts and the Muniin I Conservator of Forests, the InspectorGene al of Civil Hospitals, the Director of
Public Health, the Inspector General of Police, Municipalities Act passed towards the end of the year 1922 has considerably increased the power of the Municipal Committees The C. P. Municipalities Act has also been extended to Berar. Viewed generally, municipal self-government is considered to have taken root successfully. The larger towns have municipalities, there being 75 such bodies in the Province.

Under the Central Provinces Local Self-Government Act passed in 1920 as amended in 1931 there is a local Board for each tahsil and a district council for each district excepting Hoshangabad, Chhindwara and Saugor districts each of which has two district councils. The local board consists of elected representatives of circle and nominated members other than Government officials not exceeding in numbers one-fourth of the board, and the constitution of the district council is a certain proportion of elected representatives of local boards, of members selected by those representatives and of members, other than Government servants, nominated by Government.

The district councils in the Central Provinces have power of taxation within certain limits and local boards derive their funds in allotments from the District Councils. The new Central Provinces Local Self-Government Act has also been applied to Berar. The office Bearers of all the district councils and with few exceptions of local boards also are non-officials.

Rural education, sanitation, medical relief and rural communications are among the primary objects to which these bodies direct their attention, while expenditure on famine relief is also a legitimate charge upon the District Councilfunds.

The Central Provinces Village Panchayat Act was passed in the year 1920. So far 917, Panchayats have been established. As the result of a recommendation of a Committee appointed of a recommendation of a Committee appointed in 1925 to look into the question of Panchayats, a Village Panchayat Officer was appointed to guide the developments of the Panchayat system. This post was kept vacant on account of financial stringency for more than two years. It has now been filed in with effect from the 24th May 1933.

Public Works.

The Public Works Department, which comprises Buildings and Roads and Irrigation Branches, is under the control of the Chief Engineer who is also Secretary to the Government. There are two Superintending Engineers who between them supervise the work of both branches. The Province is well served by a net-work of roads, but in a number of cases they are not fully bridged and are therefore impassable to traffic at times during the rains.

State irrigation was introduced early in the present century mainly as a result of the re-commendations of the Irrigation Commission (1901-08). During the last thirty-five years a sum of Rs. 7.3 crores has been expended on the construction of irrigation works, of which the more important are the Wainganga, Tandula, Mahanadi, Kharung and Maniari canals.

remainder were all sanctioned as unproductive works. The three works sanctioned as productive have all falled to justify their classifica-tion in that category and have now been transterred to the unproductive list. The conditions in the province are such that irrigation works cannot be expected to be productive and their construction is justified only on account of their value as a protection against famine. The normal area of annual irrigation is at present about 323,000 acres, mainly rice and the income from these works is somewhat more than the expenditure incurred on their maintenance and management.

Police.

The police force was constituted on its present basis on the formation of the Province, the whole of which including the Cantonments and the Municipalities, is under one force. The strength is equal to one man per nine square miles of area. The superior officers comprise an Inspector-General, whose jurisdiction extends over Berar, three Deputy Inspectors-General, for assistance in the administrative control and supervision of the Police force, including the Criminal Investigation Department, and the usual cadre of District Superintendents of Police, Assistant and Deputy Superintendents and subordinate officers. On railways specal Railway Police are employed under the control of two Superintendents of Railway Police with headquarters at Raipur and Hoshangabad. A Special Armed Force of 870 men is distributed over the headquarters of men is distributed over the headquarters of eight districts, for use in dealing with armed disturbers of the peace in whatever quarter they may appear. There is a small force of Mounted Police. The Central Provinces has no rural police as the term is understood in other parts of India. The village watchman is the subordinate of the village headman and not a police official and it is considered very desirable to maintain his position in this respect.

Education.

The Education Department of the Central Provinces and Berar is administered by a Director of Public Instruction, a Registrar, Education Department and Secretary, High School Education Board, four Inspectors and two Inspectresses who in their turn are assisted by nine Assistant Inspectors and four Assistant Inspectresses. Schools are divided into (a) schools for general education and (b) schools for special education. The latter are schools in which Instruction is given in a special branch of technical or professional education. The main division of schools for general education is into Primary and Secondary. In the Primary Schools the teaching is conducted wholly in the vernacular and these schools are known as Vernacular Schools. The Secondary Schools are divided into Middle and High Schools. The former may be either Vernacular Middle Schools in which instruction is given (a) wholly in the vernacular or (b) mainly in the vernacular with an option to take English as an additional language, or Anglo-Vernacular Middle Schools in which instruction is given both in English and the Vernacular. In the High School classes instruction Three works, viz., the Mahanadi and Wainganga cular. In the High School classes instruction unti recently was given in English but the vernationed originally as productive works and the

at the beginning of the school year 1922-23. For the convenience of pupils whose mother tongue is not a recognised vernacular of the locality a few Eng.ish medium classes are still maintained. For administrative purposes schools are further divided according to their management into schools (under public management and schools controlled by private bodies). The former consist of (a) schools controlled by Government and (b) schools controlled by Jocal Bodies or Boards. The latter consist of (a) Schools which are aided by grant from Government or from Local Funds and Municipal Funds and (b) unaided schools. All schools under public management, all aided schools and all unaided recognized schools conform in their courses of study to the standards precepted by the Education Department or by the High School Education Board. They are subject to inspection by the Department and their pupils may appear as candidates for any prescribed examination for which they are otherwise eligible. Unrecognized schools do not follow the rules of the Department, nor are they subject to inspection by the Department, They are mostly indigenous schools which have been too recently opened to have acquired "recognition." Their pupils may not appear as candidates at any of the prescribed examinations without the previous sanction of the Department.

Primary Education is under the control of District Councils and Municipal Committees The Primary Education Act empowers local authorities to introduce compulsion and this is in force in several areas.

Higher Education is under the control of Nagpur University of which the following are constituent colleges:—at Nagpur, Morris College, the College of Science, Hislop College, City College, the Agriculture College, the University College, at Auracit, at Jubbulpore, Robertson College, Hitkarni City College, Spence Training College (for teachers), Hitkarni Law College, at Amraoti, King Edward College There are also an Engineering School and a Medical School at Nagpur and a Technical Institute at Amraoti.

Secondary Education is under the control of the Board of High School Education, on which the University is represented The High school certificate awarded by the Board qualifies for entrance to the University.

Medical.

The medical and public health services of the province are respectively controlled by an in-pector-General of Civil Hospitals and

Director of Public Health. The medical depament has made some progress since the year 1911. A striking advance has been made in recent years with urban sanitation, and the opening of a Medical School at Nagpur in 1914 supplied a long-felt need. The principal medical institutions are the Mayo Hospital at Nagpur, opened in 1874 with accommodation for 213 in-patients, the Victoria Hospital at Jubbulpore, opened in 1886 with accommodation for 157 in-patients, the Daga Memorial (Dufferin) Hospital and the Muir Memorial Hospital at Nagpur and the Lady Elgin Hospital and the Crump Children's Hospital at Jubbulpore, these last four being for women and children and can together accommodate for 260 in-patients. Three important hospitals for women have been recently opened at Chhindwara and Khandwa and Murtizapur and at all district headquarters where no separate women's hospitals exist, sections have been opened at the Main Hospitals for the treatment of women by women. The Mayo Hospital, Nagpur, was provincialised in 1923, the Irwin Hospital at Amnaction 1925, the Victoria Hospital at Jubbulpore in 1926, and the Silver Jubilee Hospital at Raipur in 1928. In accordance with recent policy, 125 out of 185 local fund dispensaries have been transferred to the administrative and executive control of local bodies. The Province has one Mental Hospital at Nagpur, Vaccination is compulsory in nearly all municipal towns in the Province, The Central Provinces Vaccine Institute at Nagpur was opened in 1913.

Finances.

A combination of adverse circumstances has led to a substantial contraction of the resources of the province during the last five years. In spite of drastic retrenchment all round the year opened with an unproductive debt of Rs 53 lakhs, representing loans taken in 1931-32 and 1934-35 to cover deficits. In the face of these circumstances the budget presented this year was intended to mark time and practically has reached the stage beyond which retrenchment is not possible. To replace partially the fall of revenue, principally from Excise, a bill to impose license fees on the vend of tobacco was presented to the Council. It first refused to refer the bill to a Select Committee, but subsequently agreed to the motion to circulate it for eliciting opinion thereon. It is clear that the local Government will have to explore additional sources of revenue in order to be able to resume measures of development.

North-West Frontier Province.

The North-West Frontier Province, as its name denotes, is situated on the north-west frontier of the Indian Empire It is in form an irregular strip of country lying north by an irregular strip of country lying north by cast and south by west and may generally be described as the tract of country, north of Baluchistan, lying between the Indus and the Durand boundary line with Afghanistan. To the north it extends to the mountains of the Hyall Event has received above. the Hindu Kush. From this range a long broken line of mountains runs almost due south. dividing the province from Afghanistan, until the Sulaiman Range eventually closes the south of the Province from Baluchistan. The greatest length of the province is 408 miles, its greatest breadth 279 miles and its total area about 36,356 square miles. The territory falls into three main geographical divisions: the Cis-Indus district of Hazara; the narrow strip between the Indus and the Hills, containing the Districts of Poshawar, Kohat, Bannu and Dora Ismail Khan, and the rugged mountainous regions on the north and west between those districts and the border line of Afghanistan. Hazara and the four districts in the second division contain 13,518 square miles. The mountain regions, north and west, are occupied by tribes subject only to the political control of the H E, the Governor in his capacity as Agent to the Governor-General. The area of this tract is roughly 22,828 square miles and in it are situated, from north to south, the political agencies severally known as the Malakand, Khyber, Kurram, North Waziristan and South Waziristan Agencies. Each of the Deputy Commissioners of the five administered districts is responsible for the management of political relations with certain tribes or sections of the tribes across the frontier. A few hundred miles of the trans-border Territory are internally administered by the Political Agents, but the bulk of the trans-border population stree from any internal interference, so long as offences are not committed and so long as the tribes observe the conditions on which allowances are paid to many of them.

The area of the Province is a little more than half that of Bombay (excluding Sind and Aden)

The area of the Province is a little more than half that of Bombay (excluding Sind and Aden) and amounts to more than three-fifths of the size of England without Wales. The density of population throughout the Province equals 99 persons to a square mile, but in the more favoured portions the pressure of population is much greater. In the Hazara District there are 208 persons to a square mile and in the trans-Indus plains tract the number is 156. Density for the 5 rented Districts 5,179 persons per s. mile. The key to the history of the people of the N.-W. F. P. lies in the recognition of the fact that the valley of Peshawar was always more closely connected politically with Eastern Iran than with India, though in pre-Mahomedan times its population was mainly Indian by race. Early history finds the Iranians dominating the whole Indus valley. Then time the Greek invasion under Alexander the Grest, in B.C. 327 then the invasions of the Sakas, and of the White Huns and later the two great waves of Muhammadan invasion. Last came the Sikhs invasion beginning in

1818 The Frontier Territory was annexed by the British in 1849 and placed under the control of the Punjab Government. Frequent warfare occurred with the border tribes. The most serious phases of these disturbances were the war provoked by the aggression of Afghanistanin 1919 and the protracted punitive operations against the Waziris in 1919-1920. These have resulted in the establishment at Razmak, a position dominating the Blahsud Waziri country, of a per-nanent garrison of 10,000 troops drawn mostly from stations lying in the Plains immediately below the hills A circular road from Bannu, through Razmak to Sararogha, Jandola and back to the Derajat provides communications transport with this force and facilitates its mobility. The effect of this measure has been a marked improvement in the internal peace of the Tribal area

The division of the Frontier Province from the Punjab was frequently discussed, with the double object, in the earlier stages of these debates, of securing closer and more immediate control and supervision of the Frontier by the Supreme Government and of making such alterations in the personnel and duties such anterations in the personnel and duties of frontier officials as would tend to the establishment of improved relations between the local British representatives and the independent tribesmen. The province was eventually removed from the control of the Punjab administration in 1901. To it was added the political charge of Dir, Swat and Chitral, the Political Agent of which had never been sub-ordinate to the Punjab. The new Province ordinate to the Punjab. The new Province was constituted under a Chief Commissioner and Agent to the Governor-General, with headquarters at Peshawar, in direct communication with the Government of India in the Foreign and Political Department. In April 1932 the Province was constituted a Governor's Province. In political questions there is no intermediary between the Governor and the local officer, an arrangement designed to secure both prompt disposal of references and the utilisation of the expert knowledge of fronter conditions for which the head of the administration is selected The advisability of re-uniting the Province with the Punjab was much discussed in certain Indian political circles and as a result of the views expressed upon the matter in the Legislative Assembly the Government of India in 1922 appointed a Committee of officials and unofficials to investigate it The Committee, presided over by Mr D de S. Bray, M.L.A., Joint Foreign Sceretary, toured the Frontier Province and the Punjab and heard numerous witnesses. Its members were Messrs Raza Ali, M.O.S., T. Rangacharia, Chaudhri Shaha-buddin, N.M. Samarth and K. B. Abdur Rahim Khan, members of the Legislative Assembly, H N. Bolton. I.C.S. (Foreign Pept.) and A. H. Parker, I.C.S. (Punjab) (members). The inquiry developed practically into a contest between Mahomedans and Hindus on communal lines. The Hindus, allied in sympathy with their co-religionists in the Punjab demanded the reunion of the administered districts of the

Province with the Punjab or, if that were not attainable then the placing of the judicial administration of the Province under the Punjab High Court at Lahore. The Mahomedans on the other hand claimed the right of their Province to a status corresponding with that enjoyed by other Provinces of India and to immediate reforms initiating and providing for progress along that line. The Hindus argued that a separate Pathan Province on the Frontier would cause a dangerous sentimental division from the rest of India, with leanings towards the allied racial elements outside British India. The answer to that was that a contented Pathan Province would be a valuable buttress against hostile feeling across the Border. The Committee's deliberations ended in disagreement, the two Hindu members writing each a separate report favourable to the Hindu viewpoint already explained, and the majority of the Committee, comprised of all its other members, recommending advance on a Provincial basis. Their principal recommendations were for-

Retention of the Settled Districts and Tribal Tracts as a separate unit in charge of a minor administration under the Government of India;

Early creation of a Legislative Council for the Settled District and appointment of Member of Council and Minister;

Appointment of a second Judicial Commissioner which has since been sanctioned and reform of the judicial administration in various directions, including interchange of officers with the Punjab, so that the members of the Service in the smaller Province should have the advantage of experience in the larger one.

"If (concluded the Majority) the Pathan nationality is allowed self-determination and given scope for that self-development within the Judian Empire under the Reforms Scheme after which it is now striving we are assured that with a contented Frontier population India can face with calm resolution the future that the Frontier has in store for her."

The People.

The total population of the N.-W. F. P. (1931) is 4,684,364, made up as follows:—

Hazara		669,636
Trans-Indus Districts	••	1,755,440
Trans-Border Area		2.259.288

This last figure is estimated. There are only 561 '3 females per 1,000 males in the towns, and 872 '2 females per 1,000 males in rural areas.

This disproportion of the sexes cannot at present be explained in the N.-W. F. P. any more than in other parts of Northern India where it also appears. The discrepancy is greater here than in any other Province of India. There is no ground for believing that the neglect of girls in infancy has any effect in causing the phenomenon. On the other hand, the female population has to face many trials which are unknown to men. The evils of unskilled midwifery and early marriage are among them.

Both the birth and death-rates of the Province are abnormally low. The birth rate in the administered districts, according to the last available official reports, is 25.3 and the deathrate 21.9.

The dominant language of the Province is Pashtu and the population contains several lingual strata. The most important sections of the population, both numerically and by social position, are the Pathans. They own a very large proportion of the land in the administered districts and are the ruling race of the tribal area to the west. There is a long list of Pathan, Baluch, Rajput and other tribal divisions. Gurkhas have recently settled in the Province. The Mahomedan tribes constitute almost the whole population, Hindus amounting to only 5 per cent. of the total and Sikhs to a few thousands. The occupational cleavage of the population sonfuses ethnical divisions.

(Under the North-West Frontier Province Law and Justice Regulation of 1901), custom governs all questions regarding successions, betrothal, marriage, divorce, the separate property of women, dower, wills, gifts, partitions, family relations such as adoption and guardianship, and religious usages and institutions, provided that the custom be not contrary to justice, equity or good conscience. In these matters the Mohammadan Law where the parties are Mohammadans, and Hindu Law, where the parties are Hindus, is applied in so far as that law has not been altered or abolished by any legislative enactment and is not opposed to the provisions of the Regulation and has moreover not been modified by any custom.

The climatic conditions of the N.-W.F.P. which is mainly the mountainous region, but includes the Peshawar Valley and the riverine tracts of the Indus in Dera Ismail Khan District, are extremely diversified. The latter district is one of the hottest areas of the Indian continent, while on the mountain ranges the weather is temperate in summer and intensely cold in winter. The air is generally dry and hence the annual ranges of temperature are frequently very large. The Province has two wet seasons, one the S.-W. Monsoon season, when moisture is brought up from the Arabian Sea and the Bay of Bengal: the other in winter, when storms from Mesopotamia, Persia and the Caspian Districts bring widespread rain and snowfall. Both sources of supply are precarious and not infrequently either the winter or the summer rainfall fails almost entirely.

Trade and Occupations.

The population derives its subsistence almost wholly from agriculture. The Province is practically without manufactures. There is no considerable surplus of commercial products for export. Any commercial importance which the province possesses it owes to the fact that it lies across the creat trade routes which connect the trans-border tribal territories and the marts of Afghanistan and Central Asia with India, but the influence of rail-

ways is diminishing the importance of these trading interests. Special mention may be made of the railway comparatively recently opened linking Baluchistan, in the south-west of the N -W. F. P, via Nushki with south-east Persia The line connects with the north-west railway system of India and extends 343 miles to Duzdap, within the Persian border. Two weekly trains run each way and the freight carried largely consists of carpets, wool and dates, from Persia and of tea, sugar and piece-goods from the Indian side. Though the railway is primarily strategic in purpose its commercial and political effects will be considerable. The travelling traders (or Powindahs) from the trans-frontier area have always pursued their wanderings into India and now, instead of doing their trading in and now, inseed of coing their trading in towns near the border, carry it by train to the large cities in India, The Railway line from Pir to Lankitshina which is complete and open to public traffic now will similarly, in course of time, develop both the manner and amount of transport communications and trade. The new roads in Waziristan are already targely utilised by the Tribal inhabitants for motor traffic. Prices of agricultural produce have in recent years been high, but the agriculturists, owing to the poverty of the means of communication, have to some extent been deprived of access to Indian markets and have therefore been unable to profit by the rates prevailing. On the other hand, high prices are a hardship to the non-agricultural classes. The effects of recent extensions of irrigation have been important. Land tenures are generally the same in the British administered districts as in the Punjab. The cultivated area of the and amounts to 25 per cent. and uncultivated to 75 per cent.

The work of civilisation is now making steady progress, both by the improvement of communications and otherwise. Relations with the tribes have improved trade has advanced, free medical relief has been vastly extended, police admi-nistration has been reformed and the desire of people for education has been judiciously and sympathetically fostered, though in this respect there is complaint against the limitations imposed by financial embarrassments. In the British administered districts the total perpercentage of male Scholars to the total percentage of male Scholars to the total male population 55 9 and that of female Scholars to the total female population is 1.32 for the year 1933-34, per cent. males and 7 per cent. females of the total population are returned as literates. The figures for males denote a very narrow diffusion of education even for India. Those for females are cation even for India. Those for females are not notably low, but they are largely affected by the high literacy amongst Sikh women, of whom 13.3 per cent. are returned as literate. The inauguration of a system of light railways throughout the Province, apart from all conthroughout the Province, apart from all considerations of strategy, must materially improve the condition of the people and also by that means strengthen the hold of the administration over them. The great engineering project of the Upper Swat River Canal, which was completed in 1914, and the lesser work of the Paharpur Canal, also completed a few years ago, will bring ease and prosperity to vears ago, will bring ease and prosperity to a number of peasant homes.

Administration.

The administration of the North-West Frontier Province is conducted by H. E. the Governor in Council and Agent to the Governor-General. His staff consist of—

- (1) The Hon'ble Member of the Executive Council.
- (2) The Hon'ble Minister Transferred Departments.
- (3) The Hon'ble the President, Legislative Council.
- (4) Officers of the Political Department of the Government of India.
- (5) Members of the Provincial Civil Service
- (6) Members of the Subordinate Civil Service.
- (7) Superintendents and Assistant Superintendents of Police.
- (8) Officers recruited for the service of departments requiring special knowledge—Militia, Engineering, Education, Medicine and Forestry.

The cadre posts reserved for officers coming under the fourth head above are .--

HE. the Governor and

Agent to Governor-General The Hon'ble Member of the Executive Council Chief Sceretary Secretary, Transferred Departments Administration. Under-Secretary Resident in Waziristan .. 1 Dy Commissioners 5) Political Agents Senior Sub-Judges .. 2 Asst. Commissioners and Asst. Political >1? Agents.

Judicial Commiss-Suner. Court & Dis-{ Two District and trict Judges. Sessions Judges One Additional ditto,

The districts under the Deputy Commissioners are divided into from two to five subcollectorates in charge of tabsildars, who are invested with criminal and civil and revenue powers, and are assisted by naib-tabsildars, who exercise only criminal and revenue powers. Some sub-divisions are in charge of Assistant or Extra Assistant Commissioners. The village community characteristic of some parts of India is not indigenous among the Pathans. Its place as a social unit is to some extent taken by the tribe, which is held together by the ties of kinship and ancient ancestry, real or imaginary. Modern municipal local government has been introduced in the towns. There are also district boards. The district is the unit for police, medical and educational administration and the ordinary staff includes a District Superintendent of Jail and a District

Inspector of Schools. The Province forms a single educational circle and only possesses one forest division, that of Hazara. The P W. D. of the Province carries out duties connected with both Irrigation and Buildings & Roads. It is organised in two circles (in all seven Divisions, under a Chief Engineer, P.W.D. seven Divisions, under a Unier Engineer, P.W.D who is also ex-office Secretary to H. E. the Governor in Council. The administration of the civil police force of the districts is vested in an Inspector-General. There is a special force of Frontier Constabulary. Of the Agencies only Kurram and Tochi Valley pay land revenue to the British Government. The revenue administration of all the administration of the second control of the council of the revenue administration of all five administered districts is controlled by the Revenue and Divisional Commissioner. For the administration of civil and criminal justice there are two Civil and Sessions districts, each presided over by a District and Sessions Judge. The two Judicial Commissioners are the controlling authority in the Judicial branch of the administration, and their Courts are the highest criminal and appellate tribunals in this Province. The improvements needed to bring the judicial administration up-to-date, in accord with the growth of the business of administration, are dealt with in the Inquiry Committee's report to which reference was made above.

FINANCES.

In order to meet the excess in expenditure over the income of the Provinces a subvention of Rs. one croic per annum is given by the Government of India out of Central Revenues,

The Administration.

The principal officers in the present Administration are .-

H. E the Governor and Agent to the Governor-General - H. E Lieut (Gol Sir Ralph Griffith, KCSI, CIE 'Assumed charge 18th April 1932).

- Taj Muhammad Khan, Khan Bahadur, o B E., Nowshera (Muhammadan), Badrashi, Nowshera.

Assam.

The Province of Assam, omitting the partly administered and unadministered tracts on its northern and eastern borders, comprises an area of some 67,384 square miles. It includes the Assam Valley Division, the Surma Valley and Hill Division and the State of Manipur. It owes its importance to its situation on the north-east frontier of India. It is surrounded by mountainous ranges on three sides while on the fourth (the west) lies the Province of Bengal on to the plains of which debouch the two valleys of the Brahmaputra and the Surma which form the plains of Assam. These two valleys are separated from each other by the Assam Range, which projects westward from the hills on the eastern border.

Population.

The total population of the Province in 1931 was 9,247,857, of whom 445,606 were in Manlpur. Of the population in 1931, nearly 5½ millions were Hindus, over 2½ millions were Muslims, a million belonged to tribal religions and a quarter of a million were Christians. 43 per cent. of the population speak Bengalı, 21 per cent. speak Assamese: other languages spoken in the province are llindi, Uriya, Mundari, Nepali and a great variety of languages classified under the general heading of the Tibeto-Chinese languages. Owing to the great areas of waste and rivers the density of the province is only 187, which compared with that of most other parts of India is low.

Agricultural Products.

It has agricultural advantages for which it would be difficult to find a parallel in any part of India, climate, soil, rainfall and river sys-tems all being alike favourable to cultivation Rice is the staple food crop, nearly 4,857,567 acres being devoted on this crop. Except in the Himalayan Terai irrigation is unnecessary. Tea and jute are the mos' important crops grown for export. The area under tea consists of 4,31,782 acres. Wheat and tobacco are also grown and about 35,934 acres are devoted to sugarcane.

Meteorological Conditions.

Rainfall is everywhere abundant, and ranges from 23.39 to 241.76 inches. The maximum is reached at Cherrapunji in the Khasi Hills, which is one of the wettest places in the world, having a rainfall of 520 09 inches. The temperature ranges from 59 at Sibsagar in January to 84.8 in July. Earthquakes of considerable severity have taken place, by far the worst being that which occurred in 1897.

Mines and Minerals.

The only minerals in Assam worked on a commercial scale are coal, limestone and petroleum oil. The most extensive coal measures are in the Naga Hills and the Lakhimpur districts, where about 186,813 tons were raised in 1934. Limestone is quarried in the Khasi and Jaintia Hills, Petroleum is worked only in Lakhimpur and Cachar.

Surma. This belt is traceable over a distance of some 800 miles from N.E. Assam through Cachar and Chittagong to the Arakan coast, where it has a S.S.E. trend.

Manufactures and Trade.

Silk is manufactured in the Assam Valley, Silk is manuscurred in the Assam vancy, the weaving being done by the women. Cotton weaving is also largely practised by the women, and almost every house contains a loom; the cloth is being gradually displaced by imported goods of finer texture and colour. Tea manufacture is the most important industry of the province. Boat building, brass and metal and earthenwares, and limestone burning are the other industries apart from agriculture, which itself employs about 89 per cent. of the population. Assam carries on a considerable trade with the adjoining foreign tribes and countries.

Communications.

Much of the trade of Assam is carried by river. The excellence of its water communications makes the province less dependent upon roads than other parts of India. A large fleet of steamers maintained by the India General Navigation Company and the Rivers Steam Navigation Company plies on the rivers in both Valleys. An alternate day service of passenger-boats runs between Goalundo and Dibrugarh. In recent years the road system has developed. There are two trunk roads on either bank of the Brahmaputra parts of which are metalled or gravelled and the rest unmetalled and excellent metalled roads from Shillong to Gauhati and to Cherrapunjee and also between Dimapur, on the Assam Bengal Railway, and Imphal, the capital of the Manipur State. A motor road, connecting Shillong with the Surma Valley, has been completed and opened to traffic. The Govern-ment of Assam had in 1928 carried out a considerable programme of road improvement and another programme is at present being launched which aims at the improvement of nearly 300 miles of road either by metalling or gravelling and the construction of 6 big bridges. The work has already been undertaken. Kutcha roads are being maintained by means of mechanical plant which has proved successful in maintaining, throughout the year, a surface fit for motor vehicles. Motor traffic has increased on all sides and the demands for better roads has been insistent. The open mileage of railway has also shown a steady improvement and several branch lines to the Assam Bengal Railway system have been added in recent years. The main Assam Bengal Railway line runs from Chittagong Port, in Bengal, through the North Cachar Hills to Tinsukia, a station on the Dibru-Cachar Hills to Thisticia, a station on the Dibri-Sadiya Railway and connects the Surma and Brahmaputra Valleys. A branch of the line runs from Badarpur to Silchar at the Eastern end of the Surma Valley and another runs through the west of the Assam Valley from Lumding to Gaubati where it affects a junction with the Lakhimpur and Cachar.

An account of the petroleum occurrences in Assam was recently published in the memoirs of the Geological Survey of India. It states that the petroleum localities in this petroleum localities in this province are confined to a curved belt of country inunction; along the basins of the Brahmaputra and

THE FINANCES OF ASSAM.

In common with the other Provinces of India, Assam secured substantial financial autonomy under the Reform Act of 1919. The present financial position for 1935-36 is set out in the following table:—

following table:—		
Principal Heads of Revenue—	Trs.	Trs.
Taxes on Income	220	Miscellaneous Railway expenditure 1
Salt	15	Construction of Railways

Administration.

The province of Assam was originally formed in 1874 in order to relieve the Lieutenant-Governor of Bengal of part of the administration of the huge territory then under him. In 1905, as the result of further deliberations, it was decided to add to the small Province of Assam the eastern portion of its unwieldy neighbour and to consolidate those territories under a Lieutenant-Governor. The Province of Eastern Bengal and Assam as then constituted was again broken up on the 1st of April, 1912: the Eastern Bengal Districts were united with the Bengal Commissionerships of Burdwan and the Presidency to form the Presidency of Bengal under a Governor-in-Council, Bihar, Chock-Nagpur and Orissa were formed into a separate province, while the old Province of Assam was re-constituted under a Chief Commissioner.

Under the Indian Reforms Act of 1919 the Province was raised in status to that of administration by a Governor-in-Council and was thereby ranked, with certain minor provinces, to suit its undeveloped character with the older major provinces of India.

The capital is Shillong, a town laid out with great taste and judgment among the pine woods on the slopes of the Shillong Range which rises to a height of 6,450 feet above the sea. It was destroyed in the earthquake of 1897 and has been rebuilt in a way more likely to withstand the shocks of earthquake.

GOVERNOR.

H. E. Sir Michael Keane, K.C.S.I, CIE., I.C.S EXECUTIVE COUNCIL.

The Hon'ble Rai Bahadur Promode Chandra Datta, C.I E

Baluchistan.

Baiuchistan is an oblong stretch of country | rainfall is about 5 inches, decreasing in some occupying the extreme western corner of the Indian Empire. It is divided into three main divisions: (1) British Baluchistan with an area of 9,476 square miles consisting of tracts assigned to the British Government by treaty in 1879; (2) Agency Territories with an area of 44,345 square miles composed of tracts which have, from time to time, been acquired by lease or otherwise brought under control and placed directly under British officers; and (3) the Native States of Kalat and Las Bela with an area of 80,410 square miles. The Province embraces an area of 134,638 square miles and according to the census of 1931 it contains 868,617 inhabitants.

The country, which is almost wholly mountainous, lies on a great belt of ranges connecting the Safed Koh with the hill system of Southern Persia. It thus forms a watershed the drainage of which enters the Indus on the east and the Arabian Sea on the south while on the north and west it makes its way to the inland lakes which form so large a feature of Central Asia. Rugged, barren, sun-burnt mountains, rent by high chasms and gorges, alternate with arid deserts and stony plains, the prevailing colour of which is a monotonous sight. But this is redeemed in places by level valleys of considerable size in which irrigation enables much cultivation to be carried on and rich crops of all kinds to be raised.

The political connection of the British Government with Baluchistan commenced from the outbreak of the First Afghan War in 1839; the outbreak of the First Afghan War in 1839; it was traversed by the Army of the Indus and was afterwards occupied until 1842 to protect the British lines of communication. The districts of Kachi, Quetta and Mastung were handed over to the Amir of Afghanistan and Political Officers were appointed to administer the country. At the close of the First Afghan War, the British withdrew and these districts were assigned to the Khan. If Kelet districts were assigned to the Khan of Kalat. The founder of the Baluchistan Province as it now exists was Sir Robert Sandeman who broke down the close border system and welded the Baluch and Brahui Chiefs into a close confederacy. In the Afghan War of 1879 Pishin, Shorarud, Sibi, Zawara Valley and Thal-Chotiali were handed over by Yakub Khan to the Rritish Government and retained at Sir Robe, t Sandeman's strenuous insistence.

Industries

Baluchistan lies outside the monsoon area and its rainfall is exceedingly irregular and scanty. Shahrig, which has the heaviest rainfall, records no more than 11½ inches in a rainfall, records no more than 114 inches in a Levy Corps. Fundamentally the Province is not year. In the highlands few places receive more self-supporting, the deficit being met from than 10 inches and in the plains the average | Imperial Funds.

cases to 3. The majority of the indigenous population are dependent for their livelihood on agriculture, care of animals and provision of transport. The majority of the Afghan and the Baluch, as a rule, cultivate their own lands. The Brahuis dislike agriculture and prefer a pastoral life. Previous to the advent of the British, life and property were so insecure that the cultivator was fortunate if he reaped his harvest. The establishment of peace and security has been accompanied by a marked extension of agriculture which accounts for the increase in the numbers of the purely cultivating classes. The Mekran Coast is famous for the quantity and quality of its fish and the industry is constantly developing. Fruit is extensively grown in the highlands and the export is increasing.

Education is imparted in 108 public schools of all kinds with 7,665 scholars. There is a distinct desire for education amongst the more enlightened headmen round about Quetta and other centres; but on the whole education or the desire of it has made little or no advance in the outlying districts. Coal is mined at Sharigh and Harnaj on the Sind-Pishin Railway and in the Bolan Pass. The output of coal in 1929-30 was 16,959 tons. Chromite is extracted in the Zhob District near Hindubagh. The chrome output fell off owing to poorer demand. Lime-stone is quarried in small quantities. The output of chromite during 1929-30 amounted to 17.906 tons.

Administration.

The head of the local administration is the officer styled Agent to the Governor-General and Chief Commissioner. Next in rank comes the Revenue Commissioner who controls the revenue administration and exercises the functions of a High Court as Judicial Commissioner of the Province. The keynote of administration in Baluchistan is self-government by the tribesmen, as far as may be, by means of their Jirgas or Councils of Elders along the ancient customary lines of tribal law, the essence of which is the satisfaction of the aggrieved and the settlement of the feud, not retaliation on the aggressor or the vindictive punishment of a crime. The district levies play an unob-trusive but invaluable part in the work of the Civil administration not only in watch and ward and the investigation of crime, but also in the carrying of the mails, the serving of processes and other miscellaneous work. In addition to these district levies there are ordinarily three irregular Corps in the Province; the Zhob Militia the Mekran Levy Corps and the Chagai Agent to the Governor-General and Chief Com-missioner in Baluchistan, The Hon'ble Lt.-Col A. E. B. Parsons.

Revenue and Judicial Commissioner, B. J. Gould, C.M G., C.I E., I C S.

Secretary to the Agent to the Governor-General and Chief Commissioner, Major L. W. Galbraith, M C.

Secretary to the Agent to the Governor-General in the Public Works Department, Brigadier Dawson, M C.

Assistant Secretary to the Agent to the Governor-General and Chief Commissioner, Major J. E. Lidierth, M.B.E.

Under Secretary and Personal Assistant to the Ayent to the Governor-General and Chief Commissioner, E. F. Lydall, Esq, 1.0 s.

Political Agent and Deputy Commissioner, Quetta, Lt.-Col S. Williams, OBE.

Assistant Political Agent and Assistant Commisstoner, Quetta, Captain B. Woods Ballerd, I.A. Political Agent in Kalat and Political Agent in

charge of the Bolan Pass and of Chagar District,

Emerson, I.C.S. Political Agent, Zhob, Fort, Sandeman, Major de la Fargue, I.A.

Assistant Political Agent, Zhob, Capt V. V. D. Willoughby.

Residency Surgeon and Chief Medical Officer, Major J. Roger, I M S.

ANDAMAN AND NICOBAR ISLANDS.

This is a group of islands lying in the Bay of Bengal. Port Blair, the headquarters of the Administration, is 780 miles from Calcutta, 740 miles from Madras, and 360 miles from Rangoon, with which ports there is regular communication by Government chartered steamers.

The total area of the Andaman Islands is 2,508 square miles and that of the Nicobar Islands 635 square miles. Of the former 15.74 square miles are cleared and partly under cultivation, the remaining area being dense forest. The population enumerated at the Census of 1931 was 29,463 of whom 7,631 were convicts. The number of convicts on 31st March 1932 was 7,672.

PORTS:—Port Blair and Boningto in the Andamans and Car Nicobar and Camorta in the Nicobars. Timber and coconuts are exported from the Andamans, and coconuts and their products from the Nicobars.

The Islands are administered by a Chief Commissioner. A penal settlement was es-tablished at Port Blair in 1858 and is the largest and most important in India.

Chief Commissioner, W. A. Cosgrave, C.I.E.,

I.C.S.

COORG.

Coorg is a small petty Province in Southern India, west of the State of Mysore. Its area is 1,582 square miles and its population 174,976. Coorg came under the direct protection of the British Government during the war with Sultan lippu of Seiligapatam. In May 1834, owing to misgovernment, it was annexed. The Province is directly under the Government of India and administered by the Chief Commissioner of Coorg who is the Resident in Mysore with his headquarters at Bangalore. In him are combined all the functions of a local government and a High Court. The Sccretariat
is at Bangalore where the Assistant Resident
is styled Secretary to the Chief Commissioner of Coorg. In Coorg his chief authority is the Commissioner whose headquarters are at Mercara and whose duties extend to every branch of the administration. A Legislative Council consisting of 15 elected members and five nominated members was created in 1923. The chief wealth of the country is agriculture and especially the growth of coffee. Although owing to overproduction and insect pests coffee no longer commands the profits it once enjoyed, the Indian output still holds its own against the severe competition of Brazil. The bulk of the output is exported to France.

Chief Commissioner, Coorq, The Hon. Lt.-Col. C. T. C Plowden, CIE.

AJMER-MERWARA.

Ajmer-Merwara 18 an 1solated British Province in Rajputana. The Agent to the Governor-General in Rapputana administers it as Chief Commissioner. The Province consists of two small separate districts, Almer and is regular Merwara, with a total area of 2,711 square miles chartered and a population of 501,395. At the close of the Pindariwar Daulat Rao Scindia, by a treaty, dated June 25, 1818, ceded the district to the British. Fifty-five per cent. of the population are supported by agriculture, the industrial population being principally employed in the cotton and other industries. The principal crops are maize, millet, barley, cotton, oilseeds and wheat.

Chief Commissioner, The Hon. Lt.-Col. Sir G. D Ogilyie, K.C.I.E., C.S.I.

Aden.

the Empire after the accession of Queen Victoria Its acquisition was the outcome of an outrage committed by local Arabs upon the passengers and crew of a British Indian buggalow wrecked in the neighbourhood Negotiations having in the heighbourhood regionations having failed to secure satisfactory reparation the Government of Bombay despatched a force under Major Baillie which captured Aden on January 19th, 1839.

Aden is an extinct volcano, five miles long and three broad, jutting out to sea much as Gibraltar does, having a circumference of about 15 nules and connected with the mainland by a narrow 1sthmus of flat ground The highest peak on the wall of precipitous hills that surrounds the old Crater which constitutes Aden is 1,725 feet above sea level Rugged spurs, with valleys between, radiate from the centre to the circumterence of the crater. The peninto the circumiterence of the crater. The peninsula of Little Aden, adjacent to Aden pioper, was obtained by purchase in 1808 and the adjoining tract of Shaikh Othman, 39 square miles in extent, was subsequently purchased when, in 1882, it was found necessary to make provision for an overflowing population Attached to Aden is the island of Perim, 5 square miles in extent, in the Straits of Babel-Mandeb at the entrance to the Red Sea. The Kurja Muria Islands, which were acquired from the Sultan of Muscat in 1854, were attached to the Aden Residency until 1931, when they were transferred to the control of the British Resident in the Persian Gulf.

The whole extent of the Aden Settlement, including Aden, Little Aden, Shaikh Othman and Perim, is approximately 80 square niles The 1931 census showed Aden, with Little Aden, Shaikh Othman, and Perim to have a population of 48,338. The population of Perim is 1,700 largely dependent on the Coal Depot maintained there by a commercial firm.

The language of the Settlement is Arabic, but several other Asiatic tongues are spoken The population is chiefly Arab. The chief industries are salt and eigarette manufacture and dhow building. The crops of the tribal low country adjoining are jowar, sesamum, a little country adjoining are jowar, sesamum, a little cotton, madder, a bastard saffron and, a little indigo. In the hills, wheat madder, fruit, coffee and a considerable quantity of wax and honey are obtained. The difficult problem of water supply has recently been solved. An artesian supply of fresh water has been obtained at Sheikh Othman Early in 1924 a start was made with a deep bore and sweet water was found at a depth of 1,545 feet The artesian flow of water now rises from this bore at 750 gallons per hour. A second bore was started in 1928-29 and proved more productive than the first. Five more bores have since been sunk, but two bores only are in operation

Aden was the first new territory added to Supply mains for distributing water by pige connection to houses have been laid at Crater and Tawahi and several of the private houses have been connected to the mains Drainage systems at Tawahi and Clater have been completed.

> Climate—The average temperature of the station is 87 degrees in the shade, the mean range being from 75 in January to 98 in June, with variations up to 102. The lulls between the monsoons in May and September are very oppressive. But Aden is usually free from infectious diseases and epidemics, and the absence of vegetation, the dryness of the soil and the purity of the drinking water constitution. tute efficient safeguards against many maladies common to tropical countries. The annual rainfall varies from 1 inch to 81 inches, with an irregular average of 3 inches.

> Aden Protectorate —The principal Chiefs of the Aden limiterland are in protection treaty relations with the British Government, and relations with the British Government, and their territories and dependencies comprise the Aden Protectorate. In April 1905 an Anglo-Turkish Boundary Commission signed a convention specifying a demarcated frontier between the Aden Protectorate and the (then) Turkish Yemen, stretching from Shaikh Murad, opposite Perim, to the river Bana, some 29 miles north-east of Dhala', and thence north-east to the Great Desert (Rub' al Khall). With certain modulications this frontier has been accorded by the Treaty of San's signed on 11th certain modifications this frontier has been accepted by the Treaty of San'a signed on 11th February 1934 as the boundary between the Aden Protectorate and the territories of the King of the Yemen, who became ruler of the former Turkish possessions in S W. Alabia after the conclusion of the Gleat War The Aden Protectorate stretches eastwards as far as Ras Dharpah Ali, to include the Hadhramaut and the territories of the Sultan of Qishn, bordering upon Oman, and comprises in all about 42,000 square miles

> The Sultan of Qlshn is also Sultan of Sokotra, an island about 1 382 square miles in extent lying off Cape Guardafui on the African coast. Sokotra is included in the Aden Protectorate by virtue of a treaty between the Sultan and the British Government in 1886: its population is said to be about 12,000 mainly pastoral inland, and fishing on the coast The Aden Protectorate which is under the control of the Resident and which is under the control of the Resident and Commander-in-Clinef, Aden, on behalf of the Colonial Office, is not directly administered, and since the withdrawal of a small British Garrison from Dhala' in 1908 no military posts have been maintained in tribal territory.

Administration.—The administration Aden was formerly directly under the Governnent of Bombay, but new arrangements came ments of the public and shipping. Bore water into operation in 1928 The Imperial Governhas practically replaced condensed water, ment is now responsible for the military and political situation in Aden and the Aden Chief Commissioner and Resident and Protectorate. The settlement of Aden itself Commander-in-Chief, Licutenant-Colonel remains under the Government of India. The Sir Bernard Rawdon Reilly, KCMG., financial settlement required by this division of authority provides for the payment by India to Imperial Revenues of £259,000 a year for three years and thenceforward of £150,000 a year. The larger amount is considerably less than the annual expenditure falling upon Indian revenues under the former system of control.

The administrative control of the Settlement of Aden was transferred from the Bombay Government on 1st April 1932, when Aden was formed into a separate province under the direct control of the Government of India.

The administration is vested in a Chief Commissioner who is also Resident and Commander-in-Chief Since the introduction of the dual control reterred to above, the Resident's post is to be held alternatively by an Officer of the Indian Service and a member of the Colonial Service The District of Aden Court is the Colonial Court of Admiralty under Act XVI of 1891, and its procedure as such is regulated by the provisions of the Colonial Courts of the Admialty Act, 1890 (53 and 54 Vic. Chapter 27) The laws in force in the Settlement are generally speaking those in force in India, supplemented on certain points by special regulations to suit local conditions. The management of the port is under the control of a Board of Trustees formed in 1888. The principal business of the Port Trust in recent years has been the deepening of the harbour so as to allow vessels of large size to enter and leave at all states of the tide. The police force, consisting of land, harbour and armed police, has been reorganised

The Island of Kamaran in the Red Sea about 200 miles north of Perim was taken by the British from the Turks in 1915, and is administered by the Government of India through a Civil Administrator under the control of the Chef Commissioner of Aden. It has an area of 22 square miles and a population of about 2,200 A quarantine station for pilgrims travelling to Mecca from the East is maintained on the island under the joint control of the Government of India and the Government of the Dutch East Indies.

Civil Administrator, Captain D. Thompson Under the new Federal constitution for India it is proposed to separate Aden from India

The Home Government.

Home Government of India repre-The Home Government of India represented for sixty years the gradual evolution of the governing board of the old East India Company. The affairs of the company were originally managed by the Court of Directors and the General Court of Proprietors. In 1784 Parliament established a Board of Control, with full power and authority to control and direct all operations and concerns relating to the civil and military government, and revenues of India. By degrees the number of the Board was reduced and its powers were exercised by the President, the lineal precursor of the Secretary of State for India. With modifications this system for India. With modifications this system lasted until 1858, when the Mutiny, followed by the assumption of the Government of India by the Crown, demanded a complete change. Under the Act of 1858 (merged in the consolidating measure passed in 1915) the Secretary of State is the constitutional adviser of the Crown on all matters relating to India. He inherited generally all the powers and duties which were formerly vested either in the Board of Control, or in the Company, the Directors and the Secret Committee in respect of the government and revenues of India.

The Secretary of State.

Until the Reform Act of 1919 came into force the Secretary of State had the unqualified power to give orders to every officer in India, including the Governor-General, and to superintend, direct and control all acts, operations and concerns relating to the government or revenues of India. In the relations of the Secretary of State with the Governor-General in Council no express statutory change was made, but Parliament ordained through the Joint Select Committee that in practice the conventions governing these relations should be modified; only in exceptional circumstances should he be called upon to intervene in matters of purely Indian interest where the Government and the Legislature of India are in agreement

Of the wide powers and duties still vested in the Secretary of State, many rest on his personal responsibility; others can be performed only in consultation with his Council, and for some of these the concurrence of a majority of the members of his Council voting at a meeting is required. The Act of 1919 greatly modified the rigidity of the law maintained for sixty years as to the relations of the Secretary of State with his Council, and he has fuller power than in the past to prescribe the manner in which business is to be transacted. Though in practice the Council meets weekly (save in vacation periods) this has ceased to be a statutory requirement, the law now providing that there shall be a meeting at least once in every month.

The India Council.

The number of members of the Council was reduced by the Act to not less than eight and not more than 12, the Secretary of State being free to appoint within those limits. The period of office was reduced from 7 to 5 years, though the Secretary of State may, for special reasons of public advantage to be communicated to Parliament, re-appoint a member for another five years. Half the Council must be persons who have served or resided in India for at least ten years, and who have not left India more than five years before their appointment. The Act restored the old salary of £1,200, with an additional subsistence allowance of £600 for any member who was at the time of appointment domiciled in India. Lord Morley opened the door of the Council to Indians, and since 1917 the number of Indian members has been three.

Associated with the Secretary of State and the India Council is a Secretariat known as the India Office, housed at Whitehall. Appointments to the establishment are made by the Secretary of State in Council, and are subject to the ordinary Home Civil Service rules in all respects.

In the past the whole cost of the India Office has been borne by the revenues of India, except that the Home Government made certain grants and remissions in lieu of a direct contribution amounting to £50,000 a year. The total cost now is a bout £230,000. In conformity with the spirit of the 1919 Act, an arrangement was made whereby the salary of the Secretary of State is placed on the Home estimates and most of the outlay needed for the controlling and political functions exercised in Whitehall is met from British revenues, agency functions being still chargeable to Indian revenues. The contribution from the Treasury to India Office administrative expenses is about £115,000.

The High Commissionership.

The financial readjustment was accompanied by a highly important administrative change provided for by the Act, in the creation of a High Commissioner for India In the United Kingdom with necessary establishments. From October 1st, 1920, the High Commissioner took over control of the purchase of Government stores in England and the Indian Students Branch, together with the supervision of the work of the Indian Trade Commissioner. The further development of the functions and powers of the High Commissioner have included such agency work as the payment of Civil leave allowances and pensions, the recruitment of technical officers, supervision of I C S, and Forest probationers after first appointment, the making of arrangement for officers on deputation or study leave, repatriation

of destitute lascars, sale of Government of India publications, etc. The staff of the Soores Department is located at the Depot off the Thames in Belvedere Road, Lambeth. The High Commissioner and the rest of the staff, are at India House, Aldwych, W. C. 2, bullt to the designs of Sir Herbert Baker at a cost for construction and equipment of £324,000. There could be no question of adopting a distinctly Oriental style for the exterior; but there are enough Indian features of ornamentation to proclaim the E-stern association of the place. Moreover the Exhibition Hall (typically Indian in design) has five windows on two sides for display specimens of the arts, craft and commerce of India.

Parliament set up in 1920 a Joint Standing Committee consisting of eleven members of each House to keep Parliament in closer touch with Indian affairs but the system has not flourished in the last few years.

The Indian States.

The area enclosed within the boundaries of administration during a long minoraty; but I idia is 1,808,679 square miles, with a popula- always with the undeviating intention of retion of 352,837,778 of people—nearly one-fith of the human race. But of this total a very large part is not under British Administration The area covered in the Indian States is 712,508 square miles with a population of 81,310,845 The Indian States embrace the widest variety of country and jurisdiction. They vary in size from petty states like Laws, in Rajputana, with an area of 13 square miles, the widest and the Simla Hill States, which are little more than small holdings, to States like Hyderabad, as large as Italy, with a population of over tourteen millions. They include the inhospifourteen millions. They include the inhospitable regions of Western Rajputana, Baroda, part of the Garden of India, Mysore, rich in agricultural wealth, and Kashmir, one of the most favoured spots on the face of the globe,

Relations with the Paramount Power.

So diverse are the conditions under which the Indian States were established and came into political relation with the Government of India, that it is impossible even to summarise them. But broadly it may be said that as the British boundaries expanded, the states came under the influence of the Government and the rulers were confirmed in their possessions. To this general policy however there was, for a brief period, an important departure. During the regime of Lord Dalhousie the Government introduced what was called annexation through lapse. That is to say, when there was no direct heir, the Government considered whether public interests would be secured by granting the 11ght of adoption. Through the application of this policy, the states of Satara and of Nagpur fell in to the East India Company, and the kingdom of Oudh was annexed because of the gross misgovernment of its rulers. Then came the Mutany, it was followed by the transference of the dominions of the East India Company to the Crown, and an irrevocable declaration of policy toward the Indian States. In the historic Proclamation of Queen Victoria it was set out that "We desire no extension of our present territorial possessions; and while we will permit no aggression on our dominions or our rights to be attempted with inpunit, we shall allow no encroachments on those of others We shall respect the rights, dignity and honour of the Native Princes as our own; and we desire that they, as well as our own subjects, should enjoy that prosperity and that social advancement which can only be secured by internal peace and good government." Since the issue of that proclamation there has been no encroachment on the area under Indian rule by the Government of India. On the contrary, the movement has been in the opposite direction. In 1881 the State of Mysore, which had been so long under British administration that the traditions of Native rule ware almost forgotten was restored to the were almost forgotten, was restored to the old Hindu ruling house. In 1911 the Maharajah of Benares, the great taluqdar of Oudh, was

storing the territories as soon as the necessity for intervention passed. Almost all states possess the right of adoption in default of heirs.

Rights of Indian States.

The rights and obligations of the Indian States are thus described by the Imperual Gazetteer. The Chiefs have, without exception, gained protection against dangers from without and a guarantee that the protector will respect their rights as rulers. The Pa.amount Power acts to: them in relation to foreign Powers and other Indian States The in-habitants of the Indian States are the subjects of their ruleis, and except in case of personal jurnsdiction over British subjects, these rulers and their subjects are free from the control of the law- of British India. Criminals es-caping to an Indian State must be handed over to it by its authorities, they cannot be arrested by the police of British liidia without the permission of the ruler of the State. The Indian Princes have therefore a suzerain power which acts for them in all external affairs, and at the same time scrupulously respects their internal authority. The suzerain also intervenes when the internal peace of their territories is seriously threatened. Finally they participate in all the benefits which the protecting power obtains by its diplomatic action, or by its administration of its own dominions, and thus secure a share in the commerce, the railways, the posts, and the markets of British India Except in rare cases, applied to mari-time states, they have freedom of trade with British India although they levy their own customs, and their subjects are admitted to most of the public offices of the British Government.

Obligations of Indian States.

On the other hand, the Indian States are under an obligation not to enter into relations with foreign nations or other states; the authority of their rulers has no existence outauthority of their fulers has no existence outside their territories. Their subjects outside their dominions become for all intents and pulposes British subjects. Where foreign interests are concerned, the Paramount Power must act so that no just cause of offence is given by its subordinate allies. All Indian States alike are under an obligation to refer to the British every question of disjute with other states. Inamuch as the Indian States have no use for a military establishment other than for police, or display, or for co-operation with the Imperial Government, their military forces, their equipment and armament are prescribed by the Paramount Power Although old and unaltered treates declare that the British Government will have no manner of concern with any of a Maharajah's dependents or servants, with respect to whom the Maha-rajah is absolute, logic and public of inion have old Hindu ruling house. In 1911 the Maharajah endorsed the principle which Lord Canning of Benares, the great taluqdar of Oudh, was granted ruling powers over his extensive possessions. On many occasions the Government of India is not precluded from sessions. On many occasions the Government of India is not precluded from sent of India has had to intervene, to prelin a Native Government as may threaten any vent gross misgovernment, or to carry on the

ance, nor from assuming temporary charge by a Resident, in groups of states by an Agent of a Native State when there shall be sufficient to the Governor-General, assisted by local reason to do so." Of this necessity the Governor-General and the Government of the control of Parliament, Where tween the Indian States and the Government the law of British India confers jurisdiction of India and its Foreign Department, with over British subjects or other specified persons the officials of British India and with other in foreign territory, that power is exercised by the British courts which possess it. The subjects of European Powers and the United States are on the same footing Where can tonments exist in an Indian State, jurisdiction both over the cantonment and the civil stition is exercised by the suzerain power.

a rule, reside in the states themselves In the preme Government, and in the personal charge larger states the Government is represented of the Governor-General.

tween the Indian States and the Government of India and its Foreign Department, with the officials of British India and with other Indian States. They are expected to advise and assist the Ruling Chiefs in any administrative or other matters on which they may be consulted Political Agents are similarly employed in the largor States under the Provincial Governments but in the petty states. on both over the cantonment and the civil viscal Governments but in the petty states action is exercised by the suzerain power.

Political Officers.

The powers of the British Government are represed through Butten Officers are represed through Butten Officers. exercised through Political Officers who, as are under the special supervision of the Su-

HYDERABAD.

The Nizam exercises full sovereignty within laklis which includes 12 78 laklis for completion The Nizam exercises full sovereignty within taking which inclindes 12 78 taking for completion has dominons, grants titles and has the power of large irrigation projects and 43 08 lakhs of life and death over his subjects. Before 1919, for open line works and road motor transport the Government consisted of a Prime Minister. The year opened with a cash balance of responsible to the Nizam, with Assistant Minister. The year opened with a cash balance of responsible to the Nizam, with Assistant Minister. The year opened with a cash balance of responsible to the Nizam, with Assistant Minister. The year opened with a cash balance of lakes by the end of the year. The Government Connecl consisting of 20 members of whom 12 cash open the production and Industry—The principal are official, 6 non-official, and 2 extraordinary, is responsible for making laws. The administration is carried on by a regular system of m British India The State is divided into two divisions—Telingama and districts and 153 Talukas Local Boards are constituted in each District and Taluka The State maintains its own currency which is the companion of the total area is directly administered by the State The rest consists the State maintains its own currency which is the state of the total area is directly administered by the State The rest consists the State maintains its own currency which is the state of the total area is directly administered by the State The rest consists the state of private estates of the total area is directly administered by the State The rest consists the state of private estates of the total area is directly administered by the State The rest consists the state of the total area is directly administered by the State The rest consists the state of private estates of the total area is directly administered by the State The rest consists the state of private estates of the total area is directly administered by the State The rest consists the state of private estates of the total area is directly administered by the State The rest consists the state of private estates of the total area is directly administered by the State The rest consists the state of private estates of the total area is directly administered by the State The rest consists the state of the total area is directly administered by the State The rest consists the state of the total area is directly administered by the State The rest consists the state of the total area is directly administered by the State The rest consists the state of the total area is directly administered by the State The rest consists the state of the total area is directly administered by the State The rest consists the state of the total area is directly administered by the State The rest consists the state of the total area is directly administered by the State The rest consists the state of th of gold and silver coins and a large note issue. of gold and suver come and a large note leader. The rupee, known as the Osmania Sicca, exchanges with the British Indian rupee at an average ratio of 116-10-8 to 100. There is a State postal Service and stamps for internal purposes The Nizam maintains his own army consisting of 18,418 troops of all ranks of which 11,211 are Irregular and 7,207 are Regular troops, which includes 2 battalions for Imperial Service 1,052 strong

Finance,-Hyderabad State is by far the wealthrest of the Indian States, having a revenue in its own currency of about 8½ crores, which is approximately the same as that of the Central Provinces and Behar and Orissa and double that of any other State After many vicissitudes, its finances are at present in a prosperous condition and it enjoys a large annual surplus of revenue from which a reserve of 91 crores has been built up. This is being used partly as a Sinking Fund for the redemption of debt and partly for the development of the resources of the State The Budget estimates for the present year show a revenue of 873 90 lakles under service heads and an expenditure of 877 44 lakhs, inclusive of large sums set aside the Great Indian Pennsulla Railway him, not far for development, famine insurance and debt from Wadi, supplies the whole of Southern India ledemption. The capital expenditure programme provides for an expenditure of 72 43 of 109,450 tons.

Production and Industry—The principal industry of the State is agriculture, which imaintains 57 per cent of the population The common system of land tenure is ryotwari total area o the state, and the estates of the Jagirdars and Paigah nobles. The total land revenue is over 3 crores. The principal food crops are inflet and free, the staple money-crops is cotton, which is grown extensively on the black cotton soils, and oil seeds. Hyderabad is well known for its Gaorani cotton which is the finest indigenous cotton in India total area under cotton exceeds 31 million acres. Hyderabad possesses the most southerly of the Indian coal mines and the whole of Southern India is dependent on it for such coal as is transported by rail The chief mine is situated at Singarem, which is not far from Bezwada junction on the Calcutta-Madras line The chief manufacturing industry is based on the cotton produced in the State There are 4 large mills in existence and others are likely to be established, while about one-third of the cloth worn in the Dominions is produced on local hand-looms There are about 391 ginning pressing decorticating factories in the cotton tracts and also a number of tannenes and flour unils, the total number of tanneries and nour mils, the total number of factories (as defined in the Hyderabad Factory Act) of all kinds in the State being 419 The Shahabad Cement Co. which has been established at Shahabad on

Taxation.—Apart from the land revenue chased by the Nizam's Government. The which, as stated above, brings in about \$25 road system is being rapidly extended in according the main sources of taxation are excise dance with a well-considered programme. crores, the main sources of taxation are excuse and customs. The receipts from each are estimated for the present year at 180 lakhs and 95 lakhs respectively. After these come interest on investments (27 lakhs), railways (108 lakhs) and Berar rent (29 lakhs). The customs revenue is derived from an ad valorem duty of not more than 5 per cent. on all

Imports and exports.

Communications—One hundred and thirtytwo miles of broad gauge line from Bombay
to Madras traverse the State; also 30 miles of metre gauge line from Masulipatam to Marmagoa At Wadi, on this section, the broad gauge system of the Nizam's State Railway takes off and run-ning east through Hyderabad City and Warangal reaches the Calcutta-Madras line at Bezwada, a total length of 352 miles. From Kazipet, near Warangal on this line, a new link to Bellarshah north-west for 386 miles to Mahmad on the main line of the Great Indian Pennsula Railway to Calcutta. A metre gauge line also runs south from Secunderabad through Mahbubagar to the border and is now linked up with Dronachellam on the Madras and Southern Mah Saltanath, G CIE, President ratta Raliway. Branch lines exist from Purna to Hingoli, Parbhani to Purli-Valinati, Karipalli to Kothagudium and Vikharabad to Bidar which last was extended to Purli-Valinath Thus, with branch ines, there are now 7,9 miles of broad branch 'lines, there are now 'ver inlies or broad gauge and 621 of the metre gauge in the State and 621 of the metre gauge in the State and Mcmber, Nawab Ageel Jung Bahadur, The Barsi Light Railway owns a short extension from Kurdwadi on the Bombay-Madras line to Latur in Osmanabad District. The Nizam's Guaranteed State Railway was worked by a company until April, 1930, when it was pur-Mackenzie, C.I.E.

From June 1932 the Railway is running motor bus services in the city and suburbs of Hyderabad and on some district roads. At the fleet consisted of 27 passenger nest the nest consisted of 27 passenger vehicles operating a route mileage of 284 miles. New services have been opened from time to time and the present motor mileage operated is 1,274 miles with 92 passenger vehicles

Education.—The Osmania University at Hyderabad which marks a new departure in University at Indian education, imparts instruction in all the faculties through the medium of Urdu, English being taught as a compulsory language. It has three first grade Colleges, a Medical College, an Engineering College and a Training College for teachers. The Nizam's College at Warangal on this line, a new link to Demandary strikes north thus providing the shortest route between Madras and Delhi. MYSORE.

The State of Mysore is surrounded on all early in the twelfth century by the Hoysalas, sides by the Madrar Presidency except on the an indigenous dynasty with its capital at north and the north-west where it is bounded Halebid. The Hoysala power came to an end in by the districts of Dharwar and North Canara respectively and towards the south-west by Coorg. It has two natural divisions each with a distinct character of its own-the hill country (or mainad) on the west and the wide spreading valleys and plains (the maidan) on the east. The State has an area of 29,483 square miles including that of the Civil and Mil.tary Station of yanagar in 1565. In the latter part of the eigh-Bangalore and a population of 6,557,302 of teenth century, the real sovereignty passed into whom over 92 per cent. are Hindus. Kannada is the language of the State.

History - The ancient history of the country is varied and interesting. Tradition connects the tableland of Mysore with many a legend enshrined in the great Indian epics, the Rama-yana and the Mahabharata. Coming down to historic times, the north-eastern portion of the country formed part of Asoka's Empire in the third century B.C. Mysore then came under the rule of the Andhra dynasty. From about the third to the eleventh century A.D. Mysore was ruled by three dynasties, the northwestern portion by the Pallavas and the central and the southern portions by the Gangas.

Halebid. The Hoysala power came to an end in the early part of the fourteenth century. Mysore was next connected with the Vijayanagar Empire. At the end of the fourteenth century Mysore became associated with the present ruling dynasty. At first tributary to the domi-nant empire of Vijayanagar, the dynasty attained its independence after the downfall of Vija the hands of Hyder Ali and then his son, Tippu Sultan. In 1799, on the fall of Seringapatain, the British Government restored the State comprised within its present limits, to the an-cient dynasty in the person of Maharaja Sri Krishnaraja Wadayar Bahadur III. Owing to the insurrections that broke out in some parts of the country, the management was assumed by of the country the management massessman by the British Government in 1831. In 1881, the State was restored to the dynasty in the person of Sri Chamarajendra Wadayar Bahadur ander conditions and stipulations laid down in an Instrument of Transfer. That ruler with the assistance of Mr. (afterwards Sir) K. Seshairi Iyer, K.C.S.I., as Dewan, brought Mysore to a state of great prosperity. He died in 1894, at In the eleventh century, Mysore formed part of a state of great prosperity. He died in 1894, at Chola dominion, but the Cholas were driven out the early age of 31, and was succeeded by the

present ruler His Highness Sri Krishnarajendra Wadivar Bahadur, G.O S.I., G.B.E., who was installed in 1902 In November 1913, the Instrument of Transfer was replaced by a Treaty which indicates more appropriately the relation subsisting between the British Government and the State of Mysore. In 1927, the Government of India remitted in perpetuity Rs. 10 lakhs of the annual subsidy which till then had stood at Rs. 35 lakhs.

Administration — The City of Mysore is the Capital of the State but Bangalore is the Administrative headquarters. His Highnese the Waharaja is the ultimate authority in the the wansraja is the unimate authority in the State, and the administration is conducted under his control, by an Executive Council consisting of the Dewan and two Members of Council. The High Court consisting of the Chief Justice and three Judges is the highest Judicial tribunal in the State. There are two constitutional Houses in the State— the Representative Assembly and the Legislative Council. The Representative Assembly was established in 1881 by an executive order of Government, and its powers and functions have been increased from time to time by similar orders of Government. Under the scheme of constitutional developments announced October 1923, the Representative Assembly has been placed on a statutory basis and given a definite place in the constitution by the promul gation of the Representative Assembly Regula-tion, XVIII of 1923. The franchise has been extended and the disqualification of women on the ground of sex, from exercising the right to vote and standing as candidates for election has been removed. The privilege of moving resolutions on the general principles and policy underlying the budget and on matter, of public administration has been granted in addition to those already enjoyed of making representations about wants and grievances and of interpellating Government. The Assembly is also to be consulted on all proposals for the levy of new taxes and on the general principles of ali measures of legislation before their introduction into the Legislative Council. Besides the Budget Session (formerly Eirthday Session) and the Dasara Session, provision has been made for a special session of the Assembly to summoned only for Government business. to

The strength of the Legislative Council has been raised from 30 to 50, of whom 20 are official and 30 are non-official members. The Council which exercised the privileges of interpellation, discussion of the State Budget and the moving of resolutions on all matters of public administration is, under the reformed constitution, granted the power of voting on the demands for grants. The Dewan is the exofficio President of both the Representative Assembly and the Legislative Council.

The Legislative Council has a Public Accounts Committee which examines the audit and appropriation reports and brings to the notice of the Council all deviations from the wishes of the Council as expressed in its Budget grant.

Standing Committees.—With a view to enlarge the opportunities of non-official representatives of the people to influence the everyday Administration of the State, three Standing Com-

mittees consisting of members of the Representative Assembly and the Legislative Council, have been formed, one in connection with Kallway, Electrical and P. W. Departments, the second in connection with Local Self-Government and the Departments of Medicine, Sanitation and Public Health and the third in connection with Finance and Taxation.

State Troops —The combatant strength of the Military Force at the end of 1934-35 was 1 481 of which 482 were in the Mysore Lancers, 126 in the My-ore Horse, and the remaining 873 in the Infantry. Besides, there is a Mechanical Transport Crops which consists of two lorries (six wheeler lorries) and 4 commercial lorries with the necessary staff. The total annual cost is about 16 lakhs of rupees. The cost of the Police Administration during 1934-35 was about 19 lakhs.

Agriculture - Nearly three-fourths of the population are employed in agriculture, and the general system of land tenure is ryotwari. The principal food crops are ragi, rice, jola, millets, gram and sugarcane, and the chief fibres are cotton and sun-hemp. The Seri-cultural industry is the most important sub-The Serisidiary industry practised by the agriculturists. As elsewhere in India the industry is passing through one of the gravest crises in the course of its history owing to the competition of cheap foreign silk. The area under mulberry during 1934-35 had shrunk to 30,000 acres. Department of Agriculture is popularising agriculture on scientific lines by means of demonstrations, investigations and experiment. There are 7 Government Agricultural Farms at Hebbal, Babbur, Marthur Nagenahally, Hunsur, Mandya and the coffee experimental Station at Bale-honnur. A live-stock section has been organised which has been taking necessary steps for the improvement of live-stock. A cattle breeding station has been established at Parvatharayanakere, near Ajjampur in the Kadur District, with a sub-station at Basur A Scrum Institute has been opened at Bangalore for the manufacture of serum and virus for inoculation against inderpest and other contagious diseases. There are 64 Veterinary Dispensaries and Hospitals in the State under the control of the Civil Veterinary Department.

Industries and Commerce —A Department of Industries and Commerce was organised in 1913 with a view to the development of Industries and Commerce in the State. Its main functions are stimulating private enterprise by the offer of technical advice and other assistance for starting new industries, undertaking experimental work for pioneering industries and developing existing industries and serving as a general bureau of information in industrial and commercial matters The department has under its control the following demonstration factories the Government Soap Factory, Government Porcelain Factory, Government Silk Weaving Factory and the Central Industrial Workshop. The Department has a well-equipped Government Industrial and Testing Laboratory, with a section devoted to the manufacture of pharmaceutical drugs and preparations The Well-Boring Section which is engaged in the drilling of boreholes for meeting the requirements of drinking water in the rural areas is now under the control of the Bureau of Sanitary charcoal, pig-iron, distilling wood-alcohol, and Engineering Department of Public Health developing subsidiary industries. A new Pipe Mysore is the largest producer of silk in India, Foundry was opened there for the manufacture and the care and development of this industry is entrusted to a Department of Sericulture in charge of a Superintendent subject to the general control of the Director of Industries and Commerce Arrangements have been made for the supply of disease-free seed and a central and five taluk popular schools have been doing good work

With a view to demonstrate and impart instructions in the utilisation of the high grade silk produced in the State, Government have established a Silk Weaving Factory and Dyeing and Finishing Works at Mysore The Sandalwood Oll Factory started on an experimental basis is now working on a commercial scale. A factory is working at disbursements charged to Revenue for the past Mysore A large plant at a cost of more five years together with the revised budget estithan 170 lakhs of rupees has been constructed mate for 1934-35 and budget for 1935-36 were at Bhadravathi for purposes of manufacturing as below .-

of pipes which are in great demand in several towns in India. The installation of a steel plant is nearing completion and power lines have been already laid for supplying Electric energy to Bhadravati from Mysore. The Works are on the borders of an extensive forest area and practically at the foot of the hills containing rich deposits of iron, manganese and bauxite, and are not far from the Gersoppa Water Falls estimated to be capable of producing 100,000 horse-power of electric energy. A Trade Commissioner in London has been appointed to look after the interest of

Hydro-Electric and Irrigation Works — The river Cauvery in its course through the State, possesses a natural fall of about 380 feet near the island of Sivasamudram, and this fall was harnessed in the year 1902 for the development of electric power, to the extent of about 12,000 H. P for supplying power mainly to the Kolar Gold Mining Companies and incidentally for lighting the cities of Mysore and Bangalore In course of time, the demand for power increased and with a view to protecting the existing supply and augmenting the generation of additional yower to meet the growing demands, the "Kiishiiarajasagara Reservoir" called after the name of the present Maharaja was constructed. The storage from the reservoir besides enabling the generation of electropower up to 46,000 H P. will also bring under registion about 1,20,000 acres of land situated in an area subject to more or less continuous drought. The new Canal Works were started in 1927, and the main canal is named the "Irwin Canal" after Lord Irwin the then Viceroy. An ares of about 9 thousand acres under this Canal has been brought under sugarcane cultivation and a Sugar Factory with a crushing capacity of about 1,400 tons of cane per day has been Estabished near by at Mandya An up-to-date Distillery has been creeted as an adjunct to the Sugar Factory. Full advantage is being taken of the available electric power for small industries and the electrification of towns and lift irrigation.

Education.-A separate University Mysore was established on the 1st July 1916. It is of the teaching and residential type composed of the Central and Engineering Colleges at Bangalore and the Medical Maharaja's and Maharani's Colleges at Mysore, and three

Intermediate Colleges with headquarters at Mysore. The colleges are efficiently equipped and organised and there is a training college for men located at Mysore. The Maharani's

College at Mysore is a College for Women
There are 38 High Schools of which 6 are for girls, 325 Middle Schools of which 33 are for girls, 325 Middle Schools of which 33 are for girls. Provision has been made for teaching several vocational subjects in general schools with a view to giving a bias towards the vocations and in order to enable the pupils to take to such vocations after their High School life. There are 12 Training Institutions for training teachers in Middle and Primary Schools; 3 of them are for women. The control over Primary Education has been made over to the Local Bodies under the Elementary Educational Regulation of 1930, and the Local Bodies are responsible for making due provision for extension of Primary Education in accordance with a definite programme spread over 10 years There are also schools for imparting instruction in Agricultural, Commercial. Engineering and other Technical subjects There were altogether 7,692 schools on 31st March 1934 with a strength of 3,11,957 pupils This gives one school to every 3 8 square miles of the area, and to every 835 persons of the population. The total expenditure on Education was Rs. 69,24,529 yielding an average of Rs. 1-1-3 per head of population

Dewan -Amin-ul-Mulk Sir Mirza M. Ismail. CIE., OBE

Members of the Executive Council -Rajamantrapravina Mr S.P. Rajagopalachari, B A., B L., First Member of Council, and Mr N Madhava Rao, B A, B L, Second Member of Council.

Resident in Mysore and Chief Commissioner of Coorg .- The Hon, Lieut Col C. T. C Plowden.

BARODA.

The State of Baroda is situated partly in Gujerat and partly in Kathiawar. It is divided into four district blocks (1) the southern district of Navsarı near the mouth of the Tapti river, and mostly surrounded by British territory, (2) central district north of the Narbada, in which lies Baroda, the capital city, (3) to the north of Ahmedabad, the district of Mehsana, and (4) to the west, in the peninsula of Kathiawar the district of Amreli, formed of scattered tracts of land. The area of the State is 8,164 square miles; the population is 2,443,007 of whom over

four-fifths are Hindus.

History.—The history of the Baroda State as such dates from the break-up of the Mughal The first Maratha invasion of Gujerat Empire took place in 1705. In later expeditions Pilaji Gackwar, who may be considered as the founder of the ruling family, greatly distinguished himself. Songhad was the headquarters till 1766. After 1723 Pilaji regularly levied tribute in Gujerat. His son Damaji finally captured Baroda in 1734, since then it has always been in the hands of the Galkwars; but Mughal authority in Gujerat did not end until the fall of Ahmedabad in 1753, after which the country was divided between the Gaekwar and the Peshwa In spite of the fact that Damaii was one of the Maratha chiefs defeated at Panipat by Ahmed Shah, he continued to add to his territory He died in 1768, leaving the succession in dispute between two rival sons. He was succeeded in turn by his sons Sayaji Rao I, Fattesing Rao, Mannaji Rao and Govind Rao. The last died in 1800 and was succeeded by Anand Rao, A period of political instability ensued which was ended in 1802 by the help of the Bombay Government, who established the authority of Anand Rao at Baroda By a treaty of 1805 between the British Government and Baroda, it was arranged inter alia that the foreign policy of the State should be conducted by the British, and that all differences with the Peshwa should be similarly arranged Baroda was a staunch ally of the British during the wars with Baji Rao Peshwa the Pindari hordes and Holkar. But from 1820 to 1841, when Sayaji Rao II was Gaikwar, differences arose between the two Governments which were settled by Sir James Carnac, Governor of Bombay, in 1841. Ganpat Rao succeeded Sayaji Rao II in 1847. During his rule the political supervision of Baroda was transferred to the Supreme Government His successor, Khande Rao, who ascended the gadi in 1856, introduced many reforms He stood by the British in the Mutiny. He was succeeded by his brother Malhar Rao in 1870. Malhar Rao was deposed in 1875 for "notorious misconduct" and "gross misgovernment," but the suggestion that he had instigated the attempt to poison (ol Phayre, the Resident, was not proved. Sayaji Rao III, a boy of 13 years of age, who was descended from a distant branch of the tamily was adopted as heir of Khande Rao in 1875 and is the present Maharaja. He was invested with full powers in 1881

Administration.—An executive council consisting of the principal officers of the State carries on the administration, subject to the control of the Maharaja, who is assisted by a Dewan and other officers A number of departments have been formed, which are presided over by officials corresponding to those in British India. The State is divided into five

Prants each of which is sub-divided into Mahals and Peta Mahals of which there are in all 42. Attempts have for some years been made to restore village autonomy, and village panchayats have been formed which form part of a scheme for local self-government There is a Legislative Department, under a Legal Remembrancer, which is responsible for making laws. There is also a Legislative Council, consisting of nominated and elected members A High Court at Baroda possesses jurisdiction over the whole of the State and hears all final appeals From the decisions of the High Court appeals he in certain cases, to the Maharaja who decides them on the advice of the Huzur Nyaya Sabha The State Army consists of 5,086

Nyaya Sabha The State Army consists of 5,080 Regular forces and 3,806 Irregular forces Finance—In 1932-33, the total receipts of the State were Rs 2,47,30,000 and the disbursements Rs 2,08,05,000. The principal Revenue heads were —Land Revenue, Rs 1,07,59,000, Abkari, Rs 26,58,000, Opium Rs, 3,47,000, Railways, Rs, 20,18,000, Interest Rs 18,45,000, Tribute from other States Rs 5,34,000. British Tribute from other States, Rs 5,34,000. British

Currency was introduced in 1901.

Production and Industry—Agriculture and pasture support 63 per cent, of the people. The principal crops are rice, wheat, gram, castor-oil, rapeseed, poppy, otton, san-hemp, tobacco, sugarcane, maize and garden crops The greater part of the State is held on ryotvari tenure. The State contains few minerals, except sandstone, which is quarried at Songir, and a variety of other stones which are little worked. There are 108 industrial or commercial concerns in the State registered under the State Companies' Act. There are four Agricultural Banks and 1,146 Co-operative Societies in the Baroda State.

Communications — The B B & C. I. Railway crosses part of the Navsari and Baroda prants and the Rajputana-Malwa Rajlway passes through the Mehsana prant A system of branch lines has been built by the Baroda Durbar in all the four prants in addition to which the Tapti Valley Railway and the Baroda-Godhra Chord line (B. B. & C I)pass through the State. The Railways owned by the State are about 705 70 miles in length. The total mileage of metalled and fair weather roads in the State is 532 and 932, respectively

Education —The Education Department controls 2,371 institutions of different kinds in 109 of which English is taught. The Baroda College is affiliated to the Bombay University. There are a number of high schools, technical schools, and schools for special classes, such as the jungle tribes and unclean castes State is "in a way pledged to the policy of free and compulsory primary education " Its maintains a system of rural and travelling libraries. Fighteen reasons and the rural and travelling libraries. Eighteen per cent. of the population is returned in the census as literate. Total expense on Education is Rs. 36 84 lakhs

Capital City -Baroda City with the cantonment has a population of 112,860 It contains a public park, a number of fine public buildings, palaces and offices, and it is crowded with Hindu temples. The Cantonment is to the north-west of the city and is garrisoned by an infantry battalion of the Indian Army

Highness Farzandi-1-Khas-i-Ruler -- H18 Dowlat-1-Englishia, Maharaja Sir Sayaji Rao III Gackwar, Sena Khas Khel, Samsher Bahadur, G.C.S.I., G.C.I.E., LLD, Maharaja of Baroda. Resident.—Lieut -Col. J. L R. Weir, CIE

BALUCHISTAN AGENCY.

In this Agency lies the State of Kalat with its ! feudatory State of Las Bela

Kalate's bounded on the North by the Chagai district, on the East by Sindh and the Marri-Bugti tribal territories, on the South by the Arabian Sea and on the West by Persia.

The Kalat State, unlike the other Indian States, is a confederacy of partially independent chiefs, whose head is the Khan of kalat. The divisions of the State are Sarawan or the Highlands, Jhalawan or the Lowlands, Kachhi, Mekran and Kharan The inhabitants are, for the most part Muhammadans of the Sunni sect. The area is 73,278 square miles and the population 3,42,101.

The relations of Kalat with the British Govern-

ment are governed by the treaties of 1854 and 1876, by the latter of which the independence of Kalat was recognized, while the Khan agreed to act in subordinate co-operation with the British Government. There are also agreements with Kalat in connection with the construction

of the Indo-European telegraph line, the cession of jurisdiction on the railways and in the Bolan Pass, and the permanent leases of Quetta, Nushki and Nasirabad.

The Khan is assisted in the administration of the State by a Wazir-i-Azam, at present a

European Officer of the Imperial service. The Governor-General's Agent in Baluchistan conducts the relations between the Government of India and the Khan, and exercises general political supervision over the State through the Political Agent in Kalat The revenue of the State is about Rs. 13 6 lakhs, out of which the Khan retains a civil list of Rs. 3,00,000 per annum. The present Khan is His Highness Beglar Begl Lieut. Mir Ahmad Yar Khan. He was born in 1904.

Las Bela is a small State under the suzerainty of Kalat. The Hab river for the Southern part of its course forms the Eastern boundary with Sind, and the greater part of the State consists of the valley and the delta of the Purali river, Area 7,132 square miles; population 63,008; chiefly Sunni Muhammadans. The estimated average revenue is about Rs. 3,5 lakbs. The ruling chief of Las Bela, known as the Jam, is Mir Ghulam Muhammad Khan, who was born in 1885 The administrative control of the State is exercised by the Hon'ble the Agent to the Governor General and Chief Commissioner in Baluchistan through the Political Agent Kalat. The Jam also employs a Wazir to assist him in the administration of the State.

RAJPUTANA AGENCY.

Rajputana is the name of a great territorial, being a mere desert in the far west to comparacircle with a total area of about 133,886 square miles, which includes 21 Indian States, one Chiefship, one estate, and the small British district of Ajmer-Merwara. It is bounded on the west by Sind, on the north-west by the Punjab State of Bahawalpur, on the north and north-east by the Punjab, on the east by the United Provinces and Gwallor, while the southern boundary runs across the central region of India in an irregular zigzag ine Of the Indian States, Chiefship and estate 19 are Rajput, 2 (Bharatpur and Dholpur) are Jat, and two (Palanpur and Tonk) are Mahomedan The chief administrative control of the British district is vested ex-officio in the political officer, who holds the post of Governor-General's Agent for the supervision of the relations between the several Indian States of Rajputana and the Government of India For administrative purposes they are divided into the following groups.—Bikaner and Snohl in direct relations with the Agent to the Governor-General. Eastern Rajputana Agency 6 States (Bharatpur, Bundi, Dholpur, Jhalawar, Karauli and Kotah), Jaipur Residency 5 States (Alwar, Jaipur, Kishangarh, Tonk, Shahpura, and Lawa Estate); Mewar Residency, and Southand Lawa Escard; newar nesidency, and Souter ern Rafputana States Agency 4 States (Mewar, Dangarpur, Banswara and Pratabgarh and the Kushakrath Chiefship); Western Rajputana States Residency; 4 States (Jodhpur, Jaisalmer Palanpur and Danta).

The Aravalli Hills intersect the country almost from end to end. The tract to the north-

tively fertile lands to the north-east. To the south-east on the Aravalli Hills he higher and more fertile regions which contain extensive hill ranges and which are traversed by considerable

Communications.—The total length of railways in Rajputana is 3,259 miles, of which about 1,000 are the property of the British Government. The B. B. & C. I. (Metre-gauge) (Government) runs from Ahmedabad to Bandikul and from there branches to Agra and Delhi. Of the Indian State railways the most important are the Jodhpur and Bikaner lines from Marwar lunction to Hyderabad (Sind) and

new Railway line from Mavli (on the Udaipur-Chitorgarh Railway) to Marwar Junction is under construction.

Inhabitants.—Over 50 per cent. of the population are engaged in some form of agriculture; about 20 per cent. of the total population are maintained by the preparation and supply of material substances; personal and domestic service provides employment for about 5 per cent. and commerce for 24 per cent. of the population. The principal language is Rajasthani. among castes and tribes, the most numerous are the Brahmans, Jats, Mahajans, Chamars, Rajputs, Minas, Gujars, Bhils, Malis and Balais. The Rajputs are, of course, the aristocracy of the country, and as such hold the land to a very large extent, either as receivers of west of the hills is, as a whole, sandy, ill-watered rent or as cultivators. By reason of their and unproductive, but improves gradually from position as integral families of pure descent,

as a landed nobility, and as the kinsmen ruling chiefs, they are also the aristocracy of Prince of Rajputans. The revenue and India; and their social prestige may be measured expenditure of the State are now about by observing that there is hardly a tribe or clan 80.6 lakhs. Its arreading remains are (as distinguished from a caste) in India which numerous, and stone inscriptions dating from does not claim descent from, or irregular connect the third century have been found. tion with, one of these Raiput stocks.

Udaipur State (also called (Mewar was founded in about 646 A.D. The capital city is Udaipur, which is beautifully situated on the slope of a low ridge, the summit of which is crowned by His Highness the Maharana's palaces, and to the LLB. north and west, houses extend to the banks of a beautiful piece of water known as the Pichola Lake in the middle of which stand two island palaces. It is situated near the terminus of the Udaipur-Chittorgarh Railway, 697 miles north

of G C.I.E., G.C.V.O., in 1930, is the Premier Ruling

on with, one of these Rajput stocks.

The population and area of the States are as Continuous State of Rajputana within the Political Agency of the Southern Rajputana States. The area of the State is 1,946 square miles and the population 2,60,670 souls. It is thus in regard to size eleventh among the States of Rajputana. Banswara with Dungarpur originally formed a country known as Bagar, which was, from the beginning of as Bagar, which was, from the beginning of the thirteenth century until about the year 1529, held by certain Rajput Rulers of the Ghelot or Sishodiya clan, who claimed descent from an elder branch of the family now ruling in Udaipur After the death of Maha-Rawal Udai Singhi, the Ruler of Bagar, about 1520, his territory was divided between his two sons Jagmal Singhi; and Prithvi Raji, and the descendents of the two families are row and the descendants of the two families are now and the descendants of the two lamines are now the Rulers of Banswara and Dungarpur respectively Where the town of Banswara now stands, there was a large Bhilpal or colony under a powerful Bhil Chiettain, named Wasna, who was defeated and slain by Maharawal Jagmal Singhji about 1530. The name of Banswara is by tradition said to be a corruption of Wasnawara or the country of Wasna, Others assert that the word means the country (wara) of bamboos (bans) Nearly three centuries after its foundation by Maharawal Jagmal Singhi, Maharawal Bijai Singhi anxious to get rid of the supremacy of the Mahrattas offered to become a tributary to the British Government. In 1818, a definite treaty was made with his successor, Maharawal Unied Singhii Banswara has been described as the most beautiful portion of Rajputana, it looks at its best just after the rains The principal rivers are the Mahi, the Anas, the Eran, the Chap and the Haran.

> The present Ruler is His Highness Rayan Rai Maharaja Dhiraj Maharawalji Sahib Shree Sir Piithi Singhii Bahadur, KCIE, who was born on July 15, 1888, and is the 21st in descent from Maharawal Jagmal Singhji. Revenue .. Rs. 21,68,108 Expenditure 20,34,175

Secretary .- M Hamid Husain, B.A.

Shahpura State.—The ruling family belongs to the Se-sodia Clan of Rajputs. The State came into existence about 1629 when the Parganah of Phulia was granted by the Mughai Emperor Shah-i-Jehan to Maharaj Sunan Singh, son of Maharaj Surajmai, the second son of Maharan Amar Singh of Udaipur.

Later on Raja Ran Singhji received the paraganah of Kachhola from the Maharana of Udalpur and was recognised as a great noble of the Mewar State.

The present Ruler is Rajadhiraj Sri Umaid Singhji Bahadur. The State enjoys permanent honour of nine guns salute.

Bharatpur State.—Consists largely of an immense alluvial plain, watered by the Banganga and other rivers.

The present ruling family of Bharatpur are Jats, of the Sinsinwar clan who trace their pedigree to the eleventh century. The family derives its name from its old village Sinsini. Bharatpur was the first State in Rajputana that made alliance with the British Government in 1803. It helped Lord Lake with 5,000 horse in his conquest of Agra and battle of Laswari wherein the Maratha power was entirely broken and received 5 districts as reward for the scrvice. In 1804, however, Bharatpur sided with Jaswant Rao Holkar against the British Government which resulted in a war. Peace was re-established in 1805 under a treaty of alliance and it continues in force. The Gadi being usurped by Darian Sal in 1825, the British Government took up the cause of the rightful heir Maharaja Balwant Singh Shaib. Bharatpur was besieged by Lord Combermere, and as the faithful subjects of the State also made common cause with the British Army the usurper was quickly disposed of, and Maharaja Balwant singh, the rightful heir to the Throne, came into his own. Bharat-ur also rendered valuable service to the British Government during the Mutiny During the great War the Bharatpur Durbar gave valuable help to the Imperial Government The Bharatpur Imperial Service Infantry served in East Africa and the Mule Transport Corps served in all theatres of war except Africa The present Ruler is His Highness Shri Maharaja Brijendra Sawai Brijendra Singh Bahadur, Bahadur Jung, who was born in 1918 and succeeded his father, Maharaja Sir Kishen Singh who died on the 27th of March 1929.

Revenue Rs. 31.67.000.

Dholpur State.—The family of the ruling Chiefs of Dholpur belongs to the Bamrolian Jats, the adopted home of one of their ancestors The family took the name of Bamrolia about the year 1367. They next migrated to Gwahor, where they took the part of the Rajputs in their struggles against the Emperor's Officers Eventually the Bamrolia Jats settled near Gohad and in 1505 Surjan Dco assumed the title of Rana of Gohad. After the overthrow of the Mahrattas at Panipat, Rana Rhim Singh in 1761 possessed himself of the fortress of Gwalior but lost it six years later In order to bar the encroachments of the Mahrattas, a treaty was made with the Rana in 1779 by the British Government under Warren Hastings, and the joint forces of the contracting parties re-took Gwalior. In the treaty of the 13th October 1781 between the British Government and Scindia, it was the British Government and Scindia, it was stipulated that so long as the Maharaj Rana ob-serves his treaty with the English, Scindia should not interfere with his territories. The possession of Gohad however led to disputes between the British and Scindia, and in 1805 the Governor-General transferred Gwallor and Gohad to Scindia, and that of Dholpur, Bari, Baseri, Sepau and Rajakhera to Maharaj Rana Kirat Singh. Maharaj Rana Kirat Singh died in 1836 and was succeeded by his son Maharaj Rana Bhagwant Singh on whose death in 1870 his grandson, the late Chief Maharaj Rana Nehal Singh, succeeded to the Gadi Major His Highness Rais-ud-Daula Sipahdar-ul-Mulk Saramad Rajhai Hind Maharajadhiraj Sri Sawai Maharaj Rana Sir Udai Bhan Singh Lokindra Bahadur Diler Jang Jan Deo, Ko.S. I., K. Cv.O., the present ruler, is the second son of Maharaj Rana Nehal Singh and was born on the 12th February 1893. On the death of his brother Maharaj Rana Ram Singh His Highness succeeded to the gadi on March 1911.

Karauli State.—A State in Rajputana under the Political control of the Political Agent, Eastern Rajputana States Agency, lying between 26° and 27° north latitude and 76° 30′ and 77° 30′ east longitude. Area, 1,242 square miles. The river Chambal forms the south-castern boundary of the State, dividing it from Gwalior (Scindha's Territory) on the south-west te is bounded by Jaipur; and on the north-east by the States of Bharatpur, Jaipur and Dholpur. The State pays no tribute to Government. Languages spoken Hindi and Urdu.

Ruler—His Highness Maharajadhiraj Maharaja Sir Bhom Pal, Deo Bahadur, Yadukul Chaudra Bhal, KCSI, Heir-apparent, Maharaj Kumar Ganesh Pal, Dewan—Raj Bhushan Pandit Shiv Kumar Chaturvedi, BA, MR KAS

Kotah State belongs to the Hara section of the clan of Chauhan Rajputs, and the early history of their house is, up to the 17th century, Identical with that of the Bundi family from which they are an offshoot. The ruling family belongs to the Jhala clan of Rajputs The present Ruler, Lieutenant His Highness Maharaj Rana Rajendra Singhij, succeeded to the Gadi on 13th April, 1929. He was born in 1900 and oducated at the Mayo College, Ajmer, and Oxford University. The heir-apparent Maharaj Kumar Virendra Singh was born in England on 27th September, 1921. Ral Bahadur Dewan Pandit Manmohan Lal Ji Langar is the Dewan of the State.

Bikaner State in point of area is the seventh largest of all the Indian States and the second largest in Rajputna. The population

of the State is 9,36,218 of whom 77 per cent. are Hindus, 15 per cent. Mahomedans, 4 per cent. Sikhs and 3 per cent. Jains. The capital city of Bikaner, with its population including the suburbs of 85,927, is the third city in Rajputana.

The northern portion of the State consists of level loam land, whilst the remainder is for the most part sandy and undulating. The average rainfall is about 12 inches. The water level over most of the State is from 150 feet to 300 feet deep.

The Reigning Family of Bikaner is of the Bathore clan of Rajputs, and the State was founded in 1465 AD by Rao Bikaji, son of Rao Jodhaji, Ruler of Marwar (Jodhpur), and after him both the Capital and the State are named. Rai Singhji, the first to receive the title of Rajah. one of Akbar's most distinguished Generals" and it was during his reign that the present Fort of Bikaner was built in 1593. The title of Maharajah was conferred on Rajah Anup Singhji by the Mughal Emperor in 1687 in recognition of his distinguished services in the capture of Golconda. The conspicuous ser-vices of Maharajah Sardar Singhji who in the Indian Mutiny of 1857 personally led his troops to co-operate with the British forces in the field on the outbreak of the Mutiny was acknowledged by the Government of India by the transfer of the Sub-Tehsil of Tibi, consisting of 41 villages from the adjoining Sirsa Tehsil in the Punjab to the Bikaner State.

The present Ruler, Lieutenant-General His Maharajadhiraj Raj Rajeshwar Shiromani Maharajah Sri Ganga Highness Narendra Singhi Bahadur, G.C.S.I., G.C.I.E., G.C.V.O., G.B.E., K.C.B., A.D.C., LL.D., is the 21st of a long line of distinguished rulers renowned a long line of distinguished rulers renowned for their bravery and state-manship He was born on the 13th October 1880 and assumed full ruling powers in December 1898. He was awarded the first class Kaisar-i-Hind Medal for the active part he took in relieving the famine of 1899-1900, and soon after he went on active service to China in connection with the China War of 1900-1901 in command of his famous Ganga Risala and was mentioned in despatches and received the China Metioned in despatches and received the China Medal and K C.I.E. The State Forces consist of the Camel Corps, known as 'Ganga Risala,' whose sanctioned strength is 468 strong, an Infantry Battallon known as Badul Light Infantry 619 strong, a Regiment of Cavalry known as Dungar Lancers 342 strong, including His Highness' Body Guard, a Battery of Artillery (4 guns 2'75), 238 strong, two sections of Motor Machine Guns 100 strong and Cauel Battery '90 strong and State Band Camel Battery, 20 strong and State Band 35 strong. At outbreak of the Great War in 1914, His Highness numediately placed the services of himself and his State forces and all the resources of the State at the disposal of H1s Imperial Majesty the King-Emperor, and the Ganga Risala reinforced by the Infantry Regiment which became incorporated in the Camel Corps in the field, rendered very valuable services in Egypt and Palestine. An extra force was also raised for internal security. His Highness personally went on active service in August 1914 and enjoys the honour of having fought both in France and Egypt, and thus has the distinction of having fought for the British Crown

on three Continents, viz., Asia, Europe and Africa. He was mentioned in despatches both in Egypt and France. His Highness also played a very conspicu us political part during the period of the War when he went twice to Europe as the Representative of the Princes of India, once in 1917 to attend the meetings of the Imperial War Cabinet and Conference, and again in 1918-19 to attend the Peace Conference where he was one of the signatories to the treaty of Versailles. His Highness led the Indian Delegation to the 11th Assembly of the League of Nations at Geneva and represented the Indian States at the Imperial Conference in 1930. Highness also attended the Indian Round Table Conference and the Federal Structure Subcommittee both in 1930 and 1931.

His Highness enjoys a salute of 19 guns (personal) whilst the permanent local salute of the State is also 19. His Highness has also had the honour of being elected the first Chancellor of the Chamber of Princes, an office which he filled most creditably for 5 years till 1925.

His Highness is assisted in the administration by a Prime Minister and an Executive Council. The post of Prime Minister is held by Col. Maharaj Sri Bhairun Singhji Bahadur, K.O.S.I. A Legislative Assembly was inaugurated in 1913, and consists of 45 Members, 20 out of whom are elected Members: it meets twice a year

The revenues of the State are over a crore of rupees and the State owns a large Railway system, the total mileage being 795 85. The Government hr ve also under contemplation an extension of the Bikaner State Railway from Sadulpur to Rewarl and from Bikaner to Sind Va Jalsalmer which will have the effect of connecting Delhi with Sind.

Hitherto there was practically no irrigation in the State, the crops depending only on the scanly rainfall; but the construction and opening in 1927 of the Gang Canal taken out from the Sutlej River has helped to protect about 6,20,000 acres of land in the northern part of the State against famme from which it has suffered in the past 3,39,884 bighas of the Canal land have already been sold and further sale is going on Even larger expectations are held out from the Bhakra Dam Project from which it is hoped that the remaining level lands in the north of the State will be irrigated.

A coal mine is worked at Palana, 14 miles south from the Capital.

Alwar State is a hilly tract of land in the East of Rajputana. The Alwar House is the head in India of the Naruka clan who are descendants of 'Kush', the eldest son of Shri Ram in the Solar dynasty. Raja Udai Karanji was the common ancestor of both the Alwar and Jaipur Houses. Bar Singh, the eldest son of Udai Karanji of Amber, renounced his right of succession in favour of his younger brother Nar Singhji. Nar Singhji's line founded Jaipur while in Bar Singhji's line Maharaj Pratap Singh established the Alwar State. Before his death in 1791 Maharaj Pratap Singh secured possession of large territories. His successor sent a force to co-operate with Lord Lake in the War of 1803. An alliance of mutual friendship

was concluded with the British Government, their Principality in Rajputana in the 14th Cenin that year. The present Ruler Col His Highness Shri Sewai Mahara; Raj Rishi Sir Jey Singhji Bahadur, GCSI, GCIE, who is sixth in succession from Mahara; Pratap Singhji was born in 1882, succeeded his father Maharaj Shri Mangal Singhji Dev, GCSI., in 1892 and assumed the Ruling powers in 1903. Normal revenue is about 38 lakhs. His Highness Shri Maharaj Mangal Singhji Dev was the first Prince in Rajputana to offer help in the defence of the Empire in 1888. Alwar State stood first in re-ruiting in Rajputana at the time of the Great War His Highness enjoys a salute of 17 guns. Owing to agrarian trouble in the State, His Highness was asked by the Government of India to reside outside the State for an indefinite period in 1933 and the State is now being governed by an Administrator The capital Alwar is on the B. B. & C. I Rly 98 miles west of Delhi.

CENTRAL INDIA AGENCY.

Central India Agency is the name given to the country occupied by the Indian States grouped together under the supervision of the Political Officer who is designated the Agent to the Governor-General in Central India with headquarters at Indore. As constituted in 1921—that is, after the separation of the Gwalior Residency-it is an irregularly formed tract lying in two sections, the Eastern comprising Bundelkhand Agency between 22°-38′ and 26°-19′ North and 78°-10′ and 83°-0′ East and the Western consisting of the Bhopal and Malwa Agencies between 21°-22′ and 24°-47′ North and 74°-0′ and 78°-50′ East. The British districts of Jhansi and Saugor and the Gwalior State divide the Agency into two sections The total area covered is 51,651 .11 square miles and the population (1931) amounts to 6,635.737. The great majority of the people are Hindus. There are 28 Salute States of which the following 10 have direct treaty engagements with British Government .- Indore, Bhopal, the Rewa, Orchha, Datia, Dhar, Dewas Senior Branch, Dewas Junior Branch, Samthar and Jaors, All of these are Hindu except Bhopal Jaora and Baoni which are Muhammadan. Besides these there are 61 Minor States and Guaranteed Estates, Excluding the Indore and Rewa States and the Hirapur and Lalgarh they Estates are divided into following groups for administrative purposes -Bhopal Agency, 12 States and Estates (principal States Bhopal, Dewas Senior Branch, Dewas Junior Branch), Bundelkhand Agency, 33 States and Estates (principal States Orchha and Datia); Malwa Agency, 40 States and Estates (principal States

Dhar, Jaora and Ratlam). The Agency may roughly be divided into two natural divisions, Central India West comprising the former Plateau division with such hilly land as lies on this side and Central. India East comprising the former low-lying area and the Eastern hilly tracts." The hilly tracts he along the ranges of the Vindhyas and Satpuras. They consist of forest areas and agriculture is little practised there, the inhabitants being mostly members of the wild tribes. The territories of the different States are much intermingled and their political relations with the Government of India and each other are very varied.

The following is the size, population and revenue of the ten treaty States mentioned above --

decent to a family of which one branch held the hereditary post of patel in a village near Satara. The head of the family received a patent of rank from Aurangzebe The founder of the Gwallor House was Ranoji Seindia who held a military rank under the Peshwa Ban Rao. In 1726 the Peshwa granted deeds to Puar, Holkar and Semdia, empowering them to levy "Chauth" and "Sarde-mukh" and retain half the amount for payment to their troops. In 1736 Ranon Scindia accompanied Baji Rao to Delhi where he and Mulhar Rao Holkar distinguished themselves in military exploits. Ranoji fixed his headquarters at the ancient city of Ujjain, which for the time became the capital of the Scindia dominions. During the time of Mahadii Scindia and Dowlat Rao Scindia Gwalior played an important part in shaping the history of India Despite the partial reverse which Mahadu Scindia's troops suffered at the hands of the Butish in 1780, reverses which led to the treaty of Salbai (1782). Seindia's power remained unbroken. For the first time he was now recognized by the British as an independent sovereign and not as a vassal of the Peshwa.

In 1790 his power was firmly established in Delhi. While he was indulating ambitious hopes he fell a prey to fever which ended his remarkable career on 12th February, 1794 Himself a military genius, Mahadin Scindia's armies reached the zenith of their glory under the disciplined training of the celebrated French adventure—De Boigne, Mahadin was succeeded by his giand nephew Daulat Rao in whose service Perron, a Military Commander of great renown, played a leading pait. The strength of Scindia's Army was, however, considerably weakened by the reverses, sustained at Ahmednagar, Assaye, Asirgarh and Laswaii Daulat Rao. Scindia died in 1827. Till his death he remained in undisputed possession of almost all the territory which belonged to him in 1805.

Daulat Rao was succeeded by Jankon Rao who passed away in the prime of life. On his demise in 1843 intrigue and party spirit were rampant and the Army was in a state of mutiny with the result that it came into collision with the British forces at Maharappore and Pannihai

Jankon Rao was succeeded by Jian Rao whose adherence to the British cause during the dark days of Mutiny, when his own toops deserted him, was unshakable. In 1861 he was created a Kinght Grand Commander of the Most Exalted Order of the Star of India and in 1877 was made a Councillor of the Empress Subsequently he received other titles and intered into treaties of mutinal exchange of irritories with the British Government. He died on the 20th June 1886 and was succeeded by his son Lieutenant-General H H Maharaja Sil Madho Rao Scindia, Alijah Bahadui, 1974 O, GCS I., GBE, ADC, to the King He succeeded in 1886 and obtained powers in 1894 In 1901 he went to China during the saft, he held the rank of honorary Lieutenant-General of the British Army and the honorary extress of LLD, Cambridge, and DCL, Oxon le was also a Donat of the Order of St, John of Jerusalem in England. He died in June

Gwalior.—The house of Scindia traces its levent to a family of which one branch held be hereditary post of patel in a village near tara. The head of the family received a being conducted by a Council of Regency

The Ruler of the State enjoys a salute of 21 guns. The State is in direct relations with the Government of India

The State has an area of 26 367 Sq. miles and population 35,23,070 according to the Census of 1931. Its average rainfall is from 25 to 36 inches. The average revenue is Rs. 2,41,79,000 and average expenditure Rs. 2,06,50,000

There is a well equipped State workshop in Lashkar, the capital of the State, there are electric Press, electric Power House, Leather Factory, Tannery and Pottery Works There are some good cotton mills in Lashkar and Ujjain. The State has its own Light Railway and its own Postal system according to Postal Convention The G. I. P. Railway traverses through a major portion of the State territories.

Indore -The founder of the House of the Holkar of Indoic was Malhar Rao Holkar, born in 1693. His soldierly qualities brought him to the front under the Peshwa, who took him into his service and employed him for his conquests. When the Maratha power was weakened at the battle of Panipat in 1761, Malhar Rao had acquired territories stretching from the Deccan to the Ganges as a reward for his career as a Military Commander. He was succeeded by his grandson. On his death without issue his mother Alulya Bai became the Ruler and her administration is still looked upon with admiration and reverence as that of a model ruler. She was succeeded by Tukon Holkar who had been associated with her to carry the Military Administration and had in course of it distinguished himself in various battles Tukoji was succeeded by Kashirao, who was supplanted by Yeshwant Rao, his step-brother, a person of remarkable daring strategy as exhibited in a number of engagements in which he had taken part The brilliant success he obtained at the battle of Poona against the combined armies of Peshwa and Scindia made him a dictator of Poona for some tune and he declared in consequence the independence of Holkar State During 1804-5 he had a protracted war with the British, closed by a Treaty which recognised the independence of Holkar State with practically no dimmution of its territories and rights. Yeshwant Rao showed signs of insanity from 1808 onwards and succumbed to that inalady in 1811, when he was succeeded by his minor son Malhar Rao II During the Regency which followed, the power of the State was weakened by various

During the tagency which followed, the power of the State was weakened by various causes, the most important of which was the refractory conduct of the Military Commanders. On the outbreak of the war between the English and the Peshwain 1817, some of these Commanders, with a part of the army, rebelled against the authority of the State and were disposed to betriend the Peshwa, while the regent mother and her ministers were for friendship with the British. There was a battle between the British Army and this refractory portion of the Holkar

Army which culminated in the latter's defeat | Holkar had to come to terms and to cede extensive territories and rights over the Raiput Princes to the British, but the internal sovereignty remained unaffected The Treaty of 1818 which embodied these provisions still regulates the relations between the British Government and the State.

Malhar Rao died a premature death in 1833. Then followed the weak administration of Hari Rao and his son In 1844 Tukoji Rao II ascended the Throne; but as he was a minor the administration was carried on by a Regency under Sir Robert Hamilton, the Resident as its Adviser. The prosperity of the State revived a great deal during this administration and the progress was maintained after the Maharaja assumed powers in 1852. It was interrupted by the out-break of the Mutiny in 1857 in British India. This wave of disaffection did not leave some of the State troops untouched Maharaja with his adherents and the remaining troops remained, however, staunch to the British and gave every possible assistance to the British authorities at Indore, Mhow and other places which was recognised by the British Govern-ment The Maharaja died in 1886 after having effected various reforms in the administration and raised the position of the State to a high degree of prosperity and honour. He was succeeded by Shivaji Rao who reigned for 16 years and will be specially remembered for his beneficent measures in matters of education, sanitation, medical relief and abolition of transit duties Tukoji Rao III succeeded in 1903 while yet a minor The Regency Administra-tion was continued till 1911 and it effected a number of reforms in all the branches of administration The policy of the Regency was maintained by the Maharaja. With his assumption of powers the State advanced in education in general, including female education, commerce and industrial developments, municipal franchisc and other representative institutions This prosperity was specially reflected in the Indore City, the population of which rose by 40 per

During the war or 1914 the State placed all its resources at the disposal of the British Government Its troops took part in the various theatres of war and the contribution of the State towards the war and charitable funds in money was 41 lakhs and its subscriptions to the War Loans amounted to Rs 82 lakhs, while the contribution from the Indoic people amounted to over one crore. This assistance received the recognition of the British Government.

His Highness Maharaja Tukoji Rao III abdicated in favour of his son. The present Maharaja, Yeshwant Rao Holkar, was born on 6th September 1908 He received his education in England during 1920-23 and again at Christ Church College, Oxford, from 1926 till his return in 1929 He married a daughter of the Jumor The matrice a daughter of the James Chef of Kagal (Kolhapur) in February 1924 His educational career at Oxford in England having come to an end, he returned to India arriving at Indore on the 12th November 1929, arriving at Indore on the 12th November 1929, and received administrative training with Mr. C. U Wills, Olf, ICS. He assumed full Ruling Powers on the 9th May 1930.

The area of the State is 9,902 square miles

cight lakhs. According to the Census of 1931 the population of the State is about 1,325,000, showing an increase of 14.5 per cent, over the Census figures of 1921.

SIKKIM.

Sikkim is bounded on the north and north-east ranges, which run southwards from the main by Tibet, on the south-east by Bhutan, on the chain, separate Sikkim from Nepal on the south by the British district of Darjeeling, and west, and from Tibet and Bhutan on the east, on the west by Nepal. The population consists on the Singalila range rise the great snow of Bhutias, Lepchas, and Nepalese It forms peaks of kluchininga (25,146 feet), one of the direct route to the Chumbi Valley in Tibet the highest mountains in the world. The The inain axis of the Himalayas, which runs Chola range which is much loftier than that east and west, forms the boundary between of Sinzalila, leaves the main chain at the Sikkim and Tibet. The Singalila and Chola Dongkya La.

Tradition says that the ancestors of the Rajas | Darjeeling District into Tibet. In the conven-of Sikkim originally came from eastern Tibet. | tion of 1890 provision was made for the opening The State was twice invaded by the Gurkhas at the end of the eighteenth century. On the outbreak of the Nepal War in 1814, the British formed an alliance with the Raja of Sikkim and at the close of the war the Raja was rewarded by a considerable cession of territory. In 1835 the Raja granted the site of Darjeeling to the British and received Rs. 12,000 annually in lieu of it. The State was previously under the Government of Bengal, but was brought under the direct supervision of the Government of India in 1906 The State is thinly populated, the area being 2,818 square miles, and the population 109,651, chiefly Buddhists and Hindus. The most important crops are maize and rice. There are several trade routes through Eikkim from

of a trade mart but the results were disappointing, and the failure of the Tibetans to fulfil their obligations resulted in 1904 in the despatch of a mission to Lhasa, where a new convention was signed. Trade with the British has increased in recent years, and is now between 40 and 50 lakhs yearly. A number of good roads have been constructed in recent years. The present ruler, His Highness Maharajah Sir Tashi Namgyal. K.C.I.E., was born in 1893 and succeeded in 1914, His lighness was invested with full ruling powers on the 5th April 1918. The title of a C.I.E. was conferred upon the Maharaja on the 1st January 1918 and K.CIE. on 1st January 1923. The average revenue is Ra 5,20,422.

Political Officer in Sikkim :- F. Williamson.

BHUTAN.

Bhutan extends for a distance of approximately 190 miles east and west along the southern slopes of the central axis of the Himalayas adjacent to the northern border of Eastern Bengal and Assam. Its area is 18,000 square miles and its population, consisting of Buddhists and Hindus, has been estimated at 300,000. The country formerly belonged to a tribe called The country formerly before to a write cared Tek-pa, but was wrested from them by some Tibetan soldiers about the middle of the seventeenth century. British relations with Bhutan commenced in 1772 when the Bhotias invaded the principality of Cooch Behar and British ad was invoked by that State. After a number of raids by the Bhutanese into Assam, an cuvoy (the Hon A. Eden) was sent to Bhutan who was (the Hon. A. Eden) was sent to Bhutan, who was grossly insulted and compelled to sign a treaty surrendering the Duars to Bhutan. On his return the treaty was disallowed and the Duars annexed. This was followed by the treaty of 1865 by which the State's relations with the Government of India were satisfactorily regulated. The State formerly received an allowance of half a lakh a year from the British Government in consideration of the cession in 1865 of some areas on the southern borders. This allowance was doubled by a new treaty concluded in January 1910, by which the Bhutanese Government bound itself to be guided by levies under the control of the different chiefs, the advice of the British Government in regard | They are of no military value.

to its external relations, while the British Government undertook to exercise no interference in the internal administration of Bhutan. On the occasion of the Tibet Mission of 1904, the Bhotias gave strong proof of their triendly attitude. Not only did they consent to the survey of a road through their country to Chumbi, but their ruler, the Tongsa Penlop. accompanied the British troops to Lhasa, and assisted in the negotiations with the Tibetan authorities. For these services he was made a K.C.I.E., and he has since entertained the British Agent hospitably at his capital The ruler is now known as H H, the Maharaja of Bhutan, Sir Uggen Wangchuk, K C.S.I., K.C I E. At the head of the Bhutan Government, there are nominally two supreme authorities, the Dharma Raja, known as Shapting Rempoche, the spiritual head, and the Deb or Depa Raja, the temporal ruler The Dhaima Raja is regarded as a very high incarnation of Buddha, far higher than the ordinary incarnations in Tibet, of which there are several hundreds On the death of a Dharma Raja a year or two is allowed to elapse, and his reincarnation then takes place, always in the Choje, or royal family of Bhutan

NORTH-WEST FRONTIER STATES.

15 3,000,1,800 and 4,000 square miles and population 250,000, 216,000 and 99,000 respectively.

Amb.—Is only a village on the western bank of the Indus in Independent Tanawala.

Chitral -Runs from Lowarai top to the south of the Hindu-Kush range in the north, and has an area of about 4,000 square miles. The ruling dynasty has maintained itself for more than (April 1,1895) to their relief. three hundred years, during the greater part of which the State has constantly been at war with which the State has constantly been at war with the state consist, its neighbours. It was visited in 1885 by the are extremely fertile and continuously culti-Lockhart Mission, and in 1889, on the establishment of a political agency in Gilgit, the ruler

The Indian States of the North-West Amen-ul-Mulk, accepted the advice of the Bri-Frontier Provinces are Amb, Dir, Swat tish Government in all matters connected with and Chitral. The area of the latter three foreign policy and frontier defence. His sudden death in 1892 was followed by a dispute as to the succession The eldest son Nizam-ul-Mulk was recognised by Government, but he was mur-dered in 1895. A war was declared by Umra khan of Jandul and Dir against the infidels and the Agent at Gilgit, who had been sent to Chitial to report on the situation, was besieged with his escort and a force had to be despatched

vated. The internal administration of the country is conducted by His Highness Sir of Chitral received an annual subsidy from the Shujaul-mulk, KOLE, the Mehtar of Chitral Rritish Government. That subsidy was increased and the foreign policy is regulated by the two years later on condition that the ruler, Political Agent at Malakand.

Dir.-The territories of this State, about 3,000 square miles in area, include the country drained by the Panjkora and its affluents down to the junction of the former river with the Bajaur Rud. The Nawab of Dir is the overlord of the country, exacting allegiance from the petty chiefs of the clans Dir is mainly held by Yusufzai Pathans, the old non-Pathan inhabitants being now confined to the upper portion of the Panjkora Valley known as the Dir Kohistan. A motor road has been constructed to Dir from Malakand.

Swat.—The Ruler of the State, Miangul Gulshahzada Sir Abdul Wadood, K.B.E., is a descendent of the famous Akhund Sahib of Swat. He consolidated his rule in Swat from 1917 to 1922, and was recognized by the Government of India as Wall of Swat in 1926. The area of the State is 1,800 square miles and population 216,000 The Headquarters of the State is at Saidu Sharif about 40 miles from Malakand and connected with Malakand by motor road.

Political Agent for Dir, Swat and Chitral— Major H. H Johnson, C.I.E., I.A.

STATES IN THE MADRAS PRESIDENCY.

Madras Presidency includes Indian States covering an area of 10,644 square miles. Of these, the States of Travancore and Cochin represent ancient Hindu dynastics. Pudukottai is the inheritance of the chieftain called the Tondiman, Banganapalle and Sandur two petty States, of which the first is ruled by a Nawab, lie in the centre of two British districts.

Name.	Area sq. miles.	Popula- tion	Estimated Gross Revenue in lakhs of rupees
Travancore .	7,625	5,095,973	241.36
Cochin	1,417	1,205.016	88.37
Pudukottai .	1,179	400,694	23.11
Banganapalle .	275	39,239	4.58
Saudur	167	13,583	2.21

These States were brought into direct relation with the Government of India on October 1st, 1923.

Travancore.-This State, which has an area of 7,624;84 square iniles and a population of 5,095,973 with a reveuue of Rs 232,93 lakhs occupies the south-west portion of the Indian Occupies the south-west portion of the Indian Peninsula, forming an irregular triangle with its apex at Cape Comorin. The early history of Travancore is in great part traditional; but there is little doubt that H H the Makes of the state supports a military force of 1,471 men. Education has advanced considerable in great part traditional; but there is little doubt that H. H. the Maharaja is the representative of the Chera dynasty, one of the three great Hindu dynasties which exercised sovereignty at one time in Southern and the British Indian Provinces. The princi-India. The petty chiefs, who had subsequently set up as independent rulers within the State, were all subdued, and the whole country, included within its present boundaries, was consolidated and brought under one rule, by Maharaja Marthanda Varma (1729-58). The English ing and the making of matting from the dirst settled at Anjengo, a few miles to the north of Trivandrum, and built a factory there in recent years a fillip has been given to the deve-1684. In the wars in which the East India lopment of industries as well as the arts and Company were engaged in Madura and Tinne-crafts of the State The Pallivasal Hydrovelly, in the middle of the 18th century, the electric works, the Ruber factory in Trivan-Travancore State gave assistance to the British drum, the contemplated China clay and and authorities. Travancore was reckoned as one Porelain factory and the addition of an Art of the staunchest allies of the British Power and was accordingly included in the Treaty made in are the results of the new policy included by 1784 between the East India Company and the His Highness the Maharaja. The State is Sultan of Mysore. To protect the State from well provided with roads, and with a natural

5 possible inroads by Tippu, an arrangement was recome to in 1788 with the East India Company, d and in 1795 a formal treaty was concluded, by s. which the Company agreed to protect Travancore from all foreign enemics. In 1805 the annual subsidy to be paid by Travancore was fixed at 8 lakhs of rupees.

H. H. the Maharaja (b. 7th November 1912) ascended the masnad on the 1st September 1924. During the minority the State was ruled by Her Highness Maharani Setu Lakshmi Bal, C I., aunt of the Maharaja, as Regent on his behalf. His Highness was invested with ruling powers on the 6th November 1931 The work of legisla-tion was entrusted to a Legislative Council established as early as 1888. The Legislature was last re-constituted in January 1933, when a was last re-constituted in animary 1200, when a bicameral body was instituted. The new Chambers, viz., the Sri Mulam Assembly and the Sri Chitra State Council have a predominant elected non-official majority. Both Chambers possess the right to vote on the annual Budget, to move resolutions and ask questions. Both Chambers have also the right to initiate legislation. The elections to the Assembly are based on a wide franchise Differences of opinion between the two Chambers will be settled by a Joint Committee consisting of an equal number of members selected by each Chamber. Women are placed on a footing of complete equality with men in the matter both of franchise and membership in the Legislature.

years and the State takes a leading place in that respect. In the matter of female Education the State has a leading place among Indian States pal food-grain grown is rice, but the main source of agricultural wealth is the cocoanut. Other crops are pepper, areca-nut, jack-fruit; sugar-cane and tapioca. Rubber and tea are among other important products. Cotton weaveing and the making of matting from the coir are among the chief industries within

system of back-waters, besides canals and rivers navigable for country crafts. One line of railway about one hundred miles in length cuts across the State from east to west and then runs along the Coast to the Capital. More Railway lines are in contemplation. The capital is Trivandrum.

Agent to the Governor-General—Lieut.-Col.

W. A. M. Garstin, C.B.E.

Dewan-Nawab Sir Muhammad Habibullah, K.C.S.I., K.C.I.E., LL.D.

Cochin .- This State on the south-west coast of India is bounded by the Malabar District of the Madras Presidency and the State of Travancore. Very little 18 known of its early history. According to tradition, the Rajas of Cochin hold the territory in right of descint from Cheraman Perumal, who governed the whole country of Kerala, including Travancore and Malabar, as Viceroy of the Chola Kings about the beginning of the ninth century, and afterwards estab-lished himself as an independent Ruler. In 1502, the Portuguese were allowed to settle in what is now British Cochin and in the following year they built a fort and established commercial relations in the State. In the earlier wars with the Zamorin of Callout, they assisted the Rajas of Cochin. The influence of the Portuguese on the west coast began to decline about the latter part of the seventeenth century, and in 1663 they were ousted from the town of Cochin by the Dutch with whom the Raja entered into friendly relations. About a century later, in 1759, when the Dutch power began to decline, the Raja was attacked by the Zamorun of Calicut, who was expelled with the assistance of the Raja of Travancore. In 1776, the State was conquered by Hyder Ali, to whom it remained tributary and subordinate, and subsequently to his son, Tippu Sultan. A treaty was concluded in 1791 between the Raja and the East India Company, by which His Highness agreed to become tributary to the British Government for his territories which were then in the possession of Tippu, and to pay a subsidy.

His Highness Sri Sir Rama Varmah, G.C.I.E, who ascended the throne in January 1915 having demised on 25th March 1932. His Highness Sree Sir Rama Varma, G C.I.E., who was born on 30th December 1861 succeeded to the throne and was duly installed as Maharaja on 1st June 1932. The administration is conducted under the control of the Maharaja whose chief Minister and Executive officer is the Dewan, Sir R. K. Shanmukham Chetty, K.O.I.E. The forests of Caclun form one of its most valuable assets. They abound in teak ebony, blackwood, & other valuable trees. Rice forms the staple of cultivation. Cocoanuts are largely raised in the sandy tracts and their products form the chief exports of the State, Communications by road and back-" iters are good, and the State owns a line of Lulway from Shoranore to Ernakulam, the capital of the State, and a Forest Steam Tramway pports a force of 111 officers and 552 men.

Agent to the Governor-General-Lieut.-Col W. A. M. Garstin, C.B.E.

Pudukkottai.-This State is bounded on the orth and west by Trichinopoly, on the south Ramnad and on the east by Tanjore. In

early times a part of the State belonged to the Chola Kings and the southern part to the Pandya Kings of Madura. Relations with the English began during the Carnatic wars. During the siege of Trichinopoly by the French in 1752, the Tondiman of the time did good service to the Company's cause by sending them provisions, although his own country was on at visions, although his own country was on at least one occasion ravaged as a consequence of his fidelity to the English. In 1756 he sent some of his troops to assist Muhammad Yusuf, the Company's sepoy commandant, in settling the Madura and Tinnevelly countries. Subsequently he was of much service in the wars with Haidar Ali. His services were rewarded by a grant of territory subject to the conditions that the district should not be alienated (1806). Apart from that there is no treaty or arrangement with the Raja. His Highness Sri Brihadamba Das Raja Rajagopala Tondiman Bahadur, the present ruler, is a minor. He was installed as Raja on 19-11-28. The administration of the State is carried on by an Administrator. The various departments are constituted on the British India model. principal tood crop is rice. The forests which cover about one-seventh of the State, contain only small timber. There are no large industries. The State is well provided with roads, but Pudukkottai is the only municipal town in the

Agent to the Governor-General-Lt.-Col. W. A. M. Garstin, C.B.E.

Banganapalle.-This is a small State in two detached portions which in the eighteenth century passed from Hyderabad to Mysore and back again to Hyderabad. The control over it was ceded to the Madras Government by the Nizam in 1800. The present ruler is Nawab Meer Fazle Ali Khan Bahadur. The chief food-grain is cholam. The Nawab pays no tribute and maintains no military force. The revenue of the State is over 3 lakhs. The Nawab enjoys a salute of 9 guns.

Agent to the Governor-General, -Lt.-Col. W. A. M. Garstin, C B.E.

Sandur .- The State is almost surrounded by the District of Bellary The State is under the political control of the Agent to the Governor General, Madras States. After the destruction of the Empire of Vijayanagar in 1565 the State came to be held by semi-independent chiefs under the nominal sovereignty of the Sultan of Bijapur and in 1728 one of these chiefs, a Poligar of Bedar tribe, was turned out by an ancestor of the present kaja named Sudoji Rao of the Bhosle family of the famous Mahratta Chief Sivaji; they were Senapathies of Sivaji. In Siva Rao's time the State came under the Madras Government and his heirs in perpetuity with full powers. In 1876 the title of Raja was conterred on the Chief as a Raja Shrimant Yeshwantrao Hindurso Ghorpade who was invested with full ruling powers in February 1930.

The Raja pays no tribute and maintains no military force. The most important staple crop is cholam.

The State possesses sandalwood forests and rich manganese mines Ramandrug Hill Station (Altitude 3,500 leet) and Shri Kaiteekswami Temple are the places of interest

The following are the Members of the Huzur

Darbar --

Shrimant R. M Deshmukh B.A, LLB (cantab), Bar at-law.

Shrimant Sirdar Bhujangrao Yeshwantrao Raje Ghorpade,

Meherban G T Konnur, B.A., Ex-Dewan of Sandur

Mcherban V Narasimha Rao, M.A

Agent to the Governor-General:-Lt.-Col. W A. M Gar-tin, CB.E

STATES OF WESTERN INDIA.

Owing to the large number of States concerned and the intellacing of their territories with neighbouring British districts, the transfer of States under the Bombay Government to direct political relations with the Government of India (which was advocated in the Montagu-Chelmsford Report on the Constitutional Legorius) had been delayed. The first stage of that process, however, was carried out in October, 1924, when a new Residency was created in direct relation with the Government of India comprising the whole of the compact area making up the Kathiawar, Cutch and Palanpur Agencies under the Government of Isombay

The remaining States in the Bombay Presidency which continued to remain in political relations with the Government of Bombay were transferred to the direct control of the Government of India with effect from the 1st April 1933. The transfer necessitated to grouping not only of the remaining Bombay States but also of some of the States comprised in the Western India States Agency. All the States and Estates influeto included in the Mahi Kantha Agency except the Danta States and India States Agency. These and the States and Estates comprised in the Banas Lantha Agency except the Palanpur State under the Western India States Agency which is designated. "Sabar Kantha Agency which is designated." Sabar Kantha Agency which is designated. "Sabar Kantha Agency which is designated." Sabar Kantha Agency. The Danta State has been transferred to the Rajputana Agency, so also the Palanpur State which was in the Western India States Agency has been transferred to the Rajputana Agency.

Governor-General in the States of Western India.—

The Hon Sn Courtenay Latimer, KCIE, CSI, LCS.

Judicial Commussioner in the States of Western India .- D. R. Norman, 108

Kathiawar—Kathiawar is the peninsula lymgimmediately to the north of Gujaratin the Bombay Presidency. Its extreme length is about 220 miles and its greatest breadth about 165 miles, the area being 23,445 square miles. There are mearly 200 separate States in Kathiawar, which for purposes of administrative convenience is sub-divided into subordinate Agencies known as the Western and Eastern Kathiawar Agencies. The Western and Eastern Kathiawar Agencies the Halar and Sorath Prants, while the Eastern Kathiawar Agency comprises the Prants of Jhalawad and Gobelwad but in whichever of these two Agencies States with Salutes of gins are situated, they are in direct political relations with the Hon'ble the Agent to the Governor-General The history of the British connection with Kathiawar commences from Colonel Walker's settlement of 1807. In

1863, the States in Kathiawar were classified into 7 classes, and although classes have since been abolished, the various jurisdictions still. remained graded, as fixed in 1863.

Cutch.—Before the creation in October 1924, of the Western India States Agency, the relations of the Cutch Durbar with the Bombay Government were conducted through a Political Agent in charge of the Cutch Agency, with Headquarters at Bhuj The Cutch Agency and the appointment of the Political Agent have since been abolished and the State of Cutch is in direct relations with the Hon'ble the Agent to the Governor-General in the States of Western India.

Sabar Kantha Agency —As stated above, this is a new group comprising the States and Estates in the old Banas Kantha Agency and States and Estates in the old Mahi Kantha Agency except the Danta State. Before the year 1925, the Banas Kantha Agency was known as the Palanpur Agency when it also comprised the First Class States of Palanpur and Radhanpur. Of these two States, Palanpur is now in direct political relationship with the Government of India through the Honourable the Agent to the Governor-General in Rapputana and Radhanpur, through the Honourable the Agent to the Governor-General in the States of Western India. The First Class State of Idar which was included in the old Mahi Kantha Agency is also in direct political relationship with the Government of India through the Honourable the Agent to the Governor-General in the States of Western India; so also the full powered State of Vljayanagur. The group comprising the remaining minor States, Estates and Talukas which were included in the old Banas Kantha Agency under the Wostern India States Agency and the old Mahi Kantha Agency under the Government of Bombay has been named the Sabar Kantha Agency and is in charge of a Political Agent who is subordinate to the Honourable the Agent to the Governor-General in the States of Western India.

Bhavnagar.—This State lies at the head and west side of the Gulf of Cambay. The Gohel Rajputs, to which tribe the Ruler of Bhavnagar belongs, are said to have settled in the country about the year 1260, under Sajakii from whose three sons—Ranoii, Sarangii and Shahji—are descended respectively the rulers of Bhavnagar, Lathi and Palitana. An intimate connexion was formed between the Bombay Government and Ehavnagar in the eighteenth century when the ruler of that State took pains to destroy the pirates which infested the neighbouring seas. The State was split up when Gujarat and Kathiawar were divided between the Peshwa and the Gaekwar; but the various claims over Bhavnagar were consolidated in the hands of

the British Government in 1807. The State pays an annual tribute of Rs. 1,28,060 to the British Government, Rs. 3,581-8-0 as Peshkashi to Baroda, and Rs. 22,858 as Zortalbi to Junagadh. His Highness Maharaja Kiishna Kumarsinhji succeeded to the gadi on the death of his father, Maharaia Sir Bhavsinhji K.O.S. 1. on 17th July 1919, and was invested with full powers on 18th April 1931. The State Council consists of Sir Prabhashankar D Pattani, KOIE., as President. The other members of the Council are Dewan Bahadur T. K. Trivedi and Khan Bahadur S. A. Goghawala, M.A., LL.B., Bar-at-Law One noteworthy feature in the administration is the complete separation of judicial from executive functions and the decentralisation of authority is another. The authority and powers of all the Heads of Departments have been clearly defined, and each within his own sphere is independent of the others being directly responsible to the Council.

The chief products of the State are grain, cotton, "ugar-cane and salt. The chief manufactures are oil, copper and brass vessels and cloth. The Bhavnagar State Railway is 307 miles in length The capital of the State is the town and port of Bhavnagar, which has a good and safe harbour for shipping and carried on an extensive trade as one of the principal markets and harbours of export for cotton in Kathiawar Bhavnagar supports 270 State Lancers and 250 State Infantry.

Population (in 1931) was 500,274 of whom 86 per cent were Hindus and 8 per cent. Mahomedans. The average income for the last five years was Rs. 16,662,785, and the average expenditure Rs. 13,417,672.

Dhrangadhra State is a State of the First Class in Kathiawar with a population of nearly one lakh and an area of 1,167 square miles exclusive of the Dhrangadhra portion of the Runn of Cutch. The ruler of Dhrangadhra is the head of the Jhala family of Rajputs, originally called the Makvanas This Rajput clan is of great antiquity having migrated to Kathiawar from the North, establishing itself first at Patri in the Ahmedabad District, thence moving to Halvad and finally settling in its present seat. Being the guardians of the North-Eastern marches of Kathiawar they had to suffer repeatedly from the successive inicods of the Mahomedans into that Pennsula, but after suffering the various vicissitudes of war they were confirmed in their possession of Halvad, its surrounding territories and the salt-pans attached thereto by an Imperial Firman issued by Emperor Aurangzeb The States of Wankaner, Limbdi, Wadhwan, Chuda, Sayla and Than-Lakhtar are off shoots from Dhrangadhra. His Highness Maharaja Maharana Shri Sir Ghanshyamsinini, G.C.I.E., K.C.S.I., Maharaja Raj Saheb, is the ruler of the State and the titular head of all the Jhalas. The administration is conducted under the laharaja's directions by a Council of four members, Financial, Political, Revenue and Military. The soil being eminently fit for cotton cultivation, the principal crops are long stapled cotton and cereals of various kinds, Excellent building and ornamental stone is quarried from the hills situated within the State. Wadagara Salt of an excellent quality with Magnesium Chloride and other bye-

products of salt are also manufactured in the State Salt Works at Kuda which offer practically inexhaustible supplies for their manufacture. To utilize these valuable resources, the State built a huge factory in Dirangadina, known as the Shri Shakti Alkali Works, for the manufacture on a large scale of Soda Ash, Caustic Soda and Soda Bicarb as byo-products of salt. The capital town is Dirangadina, a fortified town, 75 miles west of Ahmedabad.

Dhrangadhra State owns the Railway from Wadhwan Junction to Halvad, a distance of 40 miles, which is worked by the B. B. & C I. Railway. An extension of this line to Maliya is under contemplation. A railway siding has been laid from Dhrangadhra to Kuda—a distance of 11 miles—to facilitate the salt traffic.

Gondal State.—The Ruling Prince of Gondal is a Rajput of the Jadeja stock with the title of H. H. Maharaja Thakore Saheb, the present Ruler being H. H. Shri Bhagwat Sinhji, GCIE. The early founder of the State Kumbhoji I, had a modest estate of 20 villages. Kumbhoji II., the most powerful Chief of the House, widened the territories to almost their present limits by conquest; but it was left to the present ruler to develop its resources to the utmost, and in the words of Lord Reay, Governor of Bombay, by its "importance and advanced administration The State pays a tribute of Rs. 1,10,721.
The chief products are cotton, groundnuts and grain and the chief manufactures are cotton and woollen fabrics and gold embroidery. Gondal has always been preeminent amongst the States of its class for the vigour with which public works have been prosecuted, and was one of the earliest proneers of railway enterprise in Kathiawar, having untitated the Dhasa-Dhotaji line, it owns the Dhasa-Jam Jodhpur section called the Gondal Rallway and manages it along with the Jetalsar-Rajkot Rallway; it subsequently built the Jetalsar-Rajkot Rallway in partnership with other Native States in Kathlawar. There are no export and import dues, the people being free from taxes and dues. Comparatively speak-ing Gondal stands first in Kathiawar in respect of the spread of education. Compulsory female education in the State has been ordered by His Highness. Rs. 25 lakhs have been spent on irrigation tanks and canals, water supply and electricity to the town of Gondal. The capital is Gondal, a fortified town on the line between Raikot and Jetalsar

Junagadh State.—A first class State under the Western India States Agency and lies in the South-Western portion of the Kathiawar Pennsula between 24°-44′ and 21°-53′ North lattude; 80° and 72° East longitude with the Halar division of the province as its northern boundary and Gohilwad Prant to its east. It is bounded on the south and west by the Arabian Sea. The State is divided into 12 Mahals. It has 16 ports of which the principal are Veraval, Mangrol, and Nawabandar, The principal rivers in the State are the Bhadar, Uben, Ozat, Hiran, Saraswatl, Machhundri, Singaoda, Meghal, Vrajimi, Raval and Sabli. The principal town of Junagadh, which is one of the most picturesque towns in India, is situated on the slope of the Girnar and

the Datar Hills, while in antiquity and historical interest it yields to none. The Upperkote or old citadel contains interesting Buddhist caves and the whole of the ditch and neighbourhood is honey-combed with caves of their remains. There are a number of fine modern buildings in the town. The famous Asoka in-scription of the Buddhist time carved out on a big bolster of black granite stone is housed at the foot of the Girnar Hill, which is sacred at the foot of the Girnar IIII, which is sacred to the Jains, the Shivaites, the Vaishnavites and other Hindus. To the south-east of the Girnar Hill lies the extensive forest of the Gir comprising 494 square miles, 823 acres and 10 gunthas. It supplies tim-ber and other natural products to the residents of the State and the neighbouring distracts and of the State and the neighbouring districts and is unique as the sole stronghold of the Indian lion. The area of the State is 3,337 square miles and the average revenue amounts to about Rs. 84,00,000. The total population according to the census of 1931 is 545,152. Until 1472 when it was conquered by Sultan Mahomed Begra of Ahmedabad Junagadh was a Rajput State ruled by Chiefs of the Chuda Sama tribe. During the reign of the Empery Ather it become a dereign of the Emperor Akbar it became a dependency of Delhi under the immediate authority of the Moghal Vicercy of Gujarat. About 1735 when the representative of the Moghals had lost his authority in Gujarat, Sherkhan Babi, the ancestor of the present Babi Ruler, Babl, the ancestor of the present Babl Ruier, expelled the Moghal Governor, and established his own rule. The ruler of Junagadh first entered into engagements with the British Government in 1807. The principal articles of production in the State are cotton, bajri, juwar, wheat where come correlators. sesamum, wheat, rice, sugar-cane, ccreals, grass, sesamum, wheat, rice, sugar-cane, ccreals, grass, timber, stone, castor-seed, fish, country tobacco, groundnuts, cocoanuts, bamboos, etc., while those of manufacture are ghee, molasses, sugar-candy, copper, and brassware, dyed cloth, gold andsilver embroidery, pottery, hardware, leather, bamboo furniture, etc. The State pays a tribute of Rs. 28,394 annually to the Paramount Power and Peshkashi of Rs. 37,210 to His Highness the Gae twar, on the other hand, the State of Junagath receives a tribute stylen. the State of Junagadh receives a tribute styled Zortalbi amounting to Rs. 92,421 from not less than 134 States and Talukas, a relic of the days of Mahomedan supremacy. The State maintains State forces consisting of Lancers and the Mahabat Khanji Infantry, the sanctioned strength of the former being 173 and of the latter 219 inclusive of Bag-pipe Band.

The present Nawab is His Highness Sir Mahabat Khan III, G.C.I.E., K.C.S.I., who is the ninth in succession and seventh in descent from His Highness Bahadurkhanji I, the founder of the Babi-Family of Junagadh in 1735 A.D. His Highness the Nawab Saheb was born on 2nd August 1900 and succeeded to the gadt in 1911.

Ruler:—His Highness Sir Mahabat Khanji Rasulkhanji, G.C.I.E., K.C.S I.

Heir-Apparent—Shahzada Mahomed Dilawarkhanji, 2nd Shahzada Mahomed Himatkhanji.

President of the Council .- J. Monteath.

Navanagar State, on the southern shore of the Gulf of Cutch, has an area of 3,791 square miles. The Maharaja of Navanagar is a Jacipa Rajput by caste, and belongs to the same

family as the Rao of Cutch. The Jadejas originally entered Kathlawar from Cutch, and dispossessed the ancient family of Jethwas then established at Ghumli. The town of Jamnagar was founded in 1540. The present Jam Saheb is Captain His Highness Maharaja Jam Shri Digvijayasinhji Saheb, K.C.S.I, who succeeded in April 1933. The principal products are grain, cotton and oil-seeds, shipped from the ports of the State A small pearl fishery les off the coast. The State pays a tribute of Rs. 1,20,093 per annum jointly to the British Government, the Gaekwar of Baroda and Zortalbi to the Nawab of Junagadh-The State maintains two squadrons of Nawanagar State Lancers and 1½ company, of the State Infantry. The capital is Jamnagar, a flourishing place, nearly 4 miles in circuit, situated 5 miles cast of the port of Bedi. Population 4,09,192. Revenue nearly Rs. 941akhs.

Dewan:-Khan Bahadur Merwanji Pestonji, B.A., L L.B.

Revenue Secretary—Gokulbhai B. Desai, Bar-at-Law.

Mulitary Secretary and Home Member-Lt.-Col. R. K. Himmatsinhji.

Cutch .- The State is bounded on the north and north-west by Sind, on the east by the Palanpur Agency, on the south by the Peninsula of Kathiawar and the Guli of Cutch and the south-west by the Indian Ocean. Its area, exclusive of the great salt marsh called the Rann of Cutch, is 8,249 square miles. The capital is Bhuj, where the ruling Chief (the Maharao) His Highness Maha Rao Sri Khengari Savai Bahadur, G.C.S.I., G.C.I.E., resides. From its isolated position, the special characteristic of its isolated position, the special characteristic of its people, their peculiar dialect, and their strong feeling of personal loyalty to their ruler, the pennsula of Cutch has more of the elements of a distinct nationality than any other of the dependencies of Bombay. The earliest historic notices of the State occur in the Greek writers. Its modern history dates from its conquest by the Sind tribe of Samma Rajputs in the fourteenth century. The section of the Sammas forming the ruling family in Cutch were known Jadejas or 'children of Jada' The British made a treaty with the State in 1815. There is a fair proportion of good arable soil in Cutch, and wheat, barley and cotton are cultivated. Both iron and coal are found but are not worked. Cutch is noted for its beautiful embroidery and silverwork and its manufactures of silk and silverwork and to manufactures of sink and cotton are of some importance Trade is chiefly carried by sea. The ruling chief is the supreme authority. A few of the Bhayats are invested with jurisdictional powers in varying degrees in their own estates and over their own ryots. A notable fact in connection with the administration of the Cutch State is the number and position of the Bhayat. These are Rajput nobles forming the brotherhood of the Rao. They were granted a share in the territories of the ruling chief as provision for their maintenance and are bound to furnish troops on an emergency. The number of these chiefs is 187, and the total number of the Jadeja tribe in Cutch is about 16,000. The British military force having been withdrawn from Bhuj, the

State now pays Rs 82,257 annually as an Bhotava, Old Masjid at Munjpur, Place of Ashan Anjar equivalent to the British Government. at Gotarka, Mahabali Pir's Dargah at Gotarka The military force consists of about 1,000 in addition to which, there are some rregular infantry, and the Bhayats could furnish on requisition a mixed force of four thousand.

Porbandar -The Porbandar State on the Western Coast of the province of Kathlawar comprises an area of 6421 square miles and has a population of 1,15,741 souls according to the Census of 1931. The capital of the State is Porbander, a flourishing port having trade connections with Java, Burma, Persian Gulf, Africa and the important Continental Ports. The State has its own Continental Ports. The State has its own Railway. The well-known Porbandar stone is Railway. quarried in the Barda Hills near Adityana and is largely exported to important places in as well Porbandar Ghee (butter) as outside India. has also a reputation of its own and is largely exported to Africa. The Indian Cement Factory of Messrs. Tata & Sons was established at Porbandar in 1912. It manufactures Ganapati Brand Portland cement which has stood keen competition. Among more recent industries may be mentioned the establishment of the Nadiar Salt Works, the Maharana Spinning and Weaving Mill, Distemper and Paints manu-facture and Glass Works. The State maintains a Military Force.

His Highness Maharaja Rana Saheb Shri Sir Natwarsinhji Bahadur, K.O.SI, is the present Ruler of the State. Born on the 30th June 1901, His Highness ascended the gadi on the 26th January 1920 and married Kunvari Shri Rupaliba Saheb, M.B.E., of Limbdi.

Radhanpur is a first class State, with an area of 1,150 square miles, which is held by a branch of the illustrious Babi family, who since the rough of Humayun have always been prominent in the annals of Gujarat. The present Ruler is
His Highness Nawab Jalal-ud-inkhanji
Bismillahkhanji Babi, Nawab Saheb of
Rudhanpur. The State maintains a Police
force of 209. The principal products are cotton, wheat and grain. The capital is Radhanpur town, a considerable trade centre for Northern (Injarat and Cutch. Sami has a cotton press and 3 ginning factories. There is one ginning factory at Munjpur, one at Lolada and one at bankeshwar which is a great centre of Jain pilgrimage all the year round. Gotarka, Dev and Trakod Loti are also the principal places of pilgrimage for Mahommedans, Vaishnavas and brahmins, respectively.

There are several ancient monuments in the Stite, viz., Fatchkote at Radhanpur, Jhalore's leba at Subapure, Loteshvara Mahadev at Loti, Sonkheshvara temple at Sankheshvara, Waghel importance of the family he tank at Waghel, Varanatha place at Waghel, latleshwar Mahadev at Fatehpur, Rajaypura in the old Mahi Kantha Agency.

and Nilkantha Mahadev at Kunwar.

There is also an Anath Ashram for the poor known as "The Husseinbakhte Saheba Mohobat Vilas."

His Highness the Nawab Saheb Bahadur has established a Bank named "Vadhiar Bank" to lend money to cultivators and others on easy terms, and thus save them from the clutches of the money-lenders.

Idar — Idar is a First Class State with an area of 1,669 square miles and an average revenue of about 20 lakhs. The present Ruler of Idar H. H. Maharaja Shri Himmat Singhji sa Rajput of the Rathod clan. He was born in 1899 A.D. and ascended the gadi in 1931 on the demise of His late Highness Maharaja Sir Dowlat Singhji. His Highness accompanied His late Highness Lt -Col. Dowlat Singhji to Europe when the latter went to attend the Coronation of His Majesty the King-Emperor in London and acted as Page to his Imperial Majesty at the Coronation Darbar held at Delhi in 1911 The subordinate Feudatory Jagurdars are divided into three classes. The Jagirdars comprised in the class of Bhayats are cadets of the Ruling House to whom grants have been made in maintenance or as a Jiwarak. Those known as Sardar Pattawats are descendants of the military leaders who accompanied Anand Singhji and Rai Singhji, the founder of the present Marwar dynasty when they took possession of the State in the first quarter of the eighteenth century and to whom grants of land were made by Maharaja Shiv Singhii in 1741 A.D. were made by Manaraja Birl Singni in 1/41 A.D.
on condition of military service. In the case of
the Bhoomias are included all subordinate
Feudatories who were in possossion of their
Pattas prior to the advent of the present Marwar
dynasty. The pattas they hold were acquired
by their ancestors by grant from the former Rao Rulers of the State The Maharaja receives Rs 52,427 annually on account of Khichdi and other Raj Haks from his subordinate Sardars the tributary talukas of the Mahl Kantha Agency and others and pays Rs. 30,340 as Ghasdana to Gaekwar of Baroda through the British Government.

Vijaynagar.—The State has an ares of 135 square miles with a population of 5,858 and an annual revenue of about Rs. 57,630. The Ruler is Rathod Rajput. His ancestors were the Rulers of Idar but on being driven from that place established their rule in Polo. The that place established then the in 1995. And present Chief is Rao Shri Hammirsinhji Hindusinhji. He was born on 3rd January 1904 and succeeded to the gadi in 1916. The Ruler and succeeded to the gadi in 1916 The Ruler has no salute but on account of the historic importance of the family he enjoyed rank above the Ruler of the salute State of Danta

GUIARAT STATES AGENCY AND BARODA RESIDENCY.

UNDER THE GOVERNMENT OF BENGAL.

Cooch Behar.—This State, which at one time comprised almost the whole of Northern Bengal, Jagaddipendra Narayan Bhup Bahadur (born Assam and a part of Bhutan known as the Duars and formed part of the famous kingdom of Kamrup, is a low-lying plain in North Bengal. It has an area of 1,318 square miles and a population of 5,90,866. On the demise of the late Ruler His Highness Maharaja Sir Jitendra sisters Maharajkumaris Ila Devi, Gayatri Devi Narayan Bhup Bahadur, K.C.S.I. in December and Menaka Devi and one brother Maharaj

verty, Civil Surgeon, as members.

The capital is Cooch Behar, which is reached by the Cooch Behar Railway, linked to the Eastern Bengal Railway System.

Tripura -This State hes to the east of the district of Tippera and consists largely of hills covered with dense jungles. It has an area of 4,116 square miles and a population of 382,450. The revenue from the State is about 20 lakhs and from the Zemindaries in British India is about 13 lakhs. The State enjoys a Scilute of 13 guns. The present Ruler is His Highness Maharaja Manikya Bir Bikram Kishore Deb Barman Bahadur, who is a Kshatriya by caste and comes of the Lunar race. He was born on 19th August 1908 and he is entitled to a salute of 13 guns. He succeeded the late Maharaja Manikya Birendra Kishore Deb Harman Bahadur on 13th August 1923. The Military prestige of Tripura dates back to the fifteenth construction of the successive of the successiv Maharaja Manikya Birendra Kishore Debi do th in November, 1930, married the eldest larman Bahadur on 13th August 1923. The daughter of H H Maharaja Mahendra Sir Military prestage of Tripura dates back to the Yadvendia Singh Bahadur, K.C.I.E., Maharaja fifteenth century and a mythical account of Panna. The State courts are authorised to the State takes the history to an even earlier inflict capital punishment. The capital is date. Both as regards its constitution and its Agartala. relations with the British Government, the Political Agent — State differs alike from the large Native Tippera (Exofficio.)

kumar Indrajitendra Narayan Her Highness the Maharani Saheba is Regent of the State and the administration of the State is conducted by a Council of Regency composed of Her Highness I linded property situated in the plains of the the Regent, President, Itt.-Col. J. A Brett, C.E., Vice-President, with (vacant) Revenue cold ecovers an area of 600 square miles, and is Sessions Judge, and Sj Dineshananda Chakrapetty, Clul Surgeon, as members occurred on the occasion of almost every vacancy in the gad producing in times gone by disturbances and domestic wars, and exposing the inhabitants to serious disorders and attacks from the Kukis, who were always called in as auxiliaries by one or other of the contending parties. The principles which govern succession to the State have recently, however, been embodied in a sanad which was drawn up in 1904. The chief products of the State are rice, cotton, til, jute, tea and forest produce of various kinds, the traffic being carried chiefly by water. The Maharaja received full administrative powers on 19th August 1927. His Highness married the sixth daughter of the late Maharaja Sir Bhagabati Prasad Singhji Saheb Bahadur, K.C.I.E., K.B.E., of Balarampur (Oudh) on the 16th January 1929 but on her

EASTERN STATES AGENCY.

Central Provinces were transferred from the lished that the ancient Bhanja Kingdom political control of the Governor in Council of michided almost all the States of Orissa together Bihar and Orissa and the Governor in Council of with the northern portion of the Ganjam District the Central Provinces respectively, except the Makrai State which has been included in the Bhopal Political Agency in Central India, and placed in the political charge of an Agent to the Governor General, Eastern States The States of Bamra, Bastar, Baud, Dhenkanal, Gangpur, Jashpur, Kalahandi (Karond), Kanker, Keonjhar, Korea, Mavurbhanj, Nandgaon, Nayagarh, Patna, Rangarh, Sarangarh, Serankela, Sonput and Sarguja are in the direct Political charge of the Agent to the Governor General at Ranchi while the States of Athgarh, Athmalhk, Baramba, Bonai, Changbhakar, Chhuikhadan, Daspalla, Hindol, Kawaidha, Khandpara, Rairakhol, Ranpur, Sakti, Talcher Tiguta and Udoypur are in the political charge of the Secret-Bary to the Agent to the Governor General, Eastern States. and Political Agent at

The total area is 59,680 square miles and the total population 1,38,67.259 The annual income is Rs. 71,19,705. These States pay a tribute amounting to Rs. 3,35,549 to Govern-

With effect from the 1st April 1933 the and copper-plate grants that have come to light States of Bihai and Orissa and the States of the within the State area as also outside, have established the states of the light area as also outside, have established the states of the light area as also outside, have established the states of the light area as also outside, have established the states of the light area as also outside, have established the states of the light area as also outside, have established the states of the light area. with the northern portion of the Ganjam District covering about 16 000 square miles Though the origin of the kingdom is lost in hoary antiquity, tradition recorded by Hunter places it more than two thousand years ago Bhanja Kings ruled over their extensive territory from Khujinga-Kotta, modern Khiching, whose ancient remains bear cloquent testimony to the emmence and culture of the then Rulers which found expression in diverse forms of art of a very high order styled Mayurbhanj School of Art by Rene Grousset and art critics of acknowledged authority During the Moghul period, Mayur-bhanj was recognised by the Emperors as an autonomous principality, and it had under it "twelve Zemindaries containing forty-two
Killahs" In the days of Mahratta supremacy m Orissa, the Rulers of Mayurbhan maintained their independence They were oftener than not at War with the Marhathas who attempted to levy a precarious tribute by force of arms. In 1761, the East India Company took possession of Midnapore and almost immediately after-wards the Ruler of Mayurbhan opened friendly negotiations with the British authorities. During half a century preceding British conquest of Oussa, the British authorities maintained their Mayurbhanj is the only full-powered State in friendship with Mayurbhan and these friendly the Eastern States Agency, and its Ruler the relations were utilised by the Marquis of Wellesonly permanent member of the Chamber of ley during the Orissa campaign in 1803 A Princes from the Agency. Archeological finds treaty was concluded between the East India

Company and Mayurbhan State in 1829 When they are made up for the most part of legend the Indian Mutiny broke out, Mayurbhani was found loyally espousing the Bitish cause During the last great War, the State made large contributions in men and money.

Keonthar is an off-shoot of Mavurbhan, being held by a junior branch of the Ruling family which separated from the paient State several centuries ago

Kharsawan and Seraikela—The inhabitants are mostly hill-men of Kolarian or Dravidian origin The Chief of Kharsawan belongs to a junior branch of the Porahat Raja's family. The State first came under the notice of the British in 1793, when in consequence of disturbances on the frontier of the old Jungle Mahals the Thakur of Kharsawan and the Kunwar of Seraikela were compelled to enter into certain agreements relating to the treatment of fugitive rebels. The Chief is bound, when called upon, to render service to the British Government, but he has never had to pay tribute The Bengal Nagpur Railway runs through a part of the State. The adjoining State of Seraikela is held by the elder branch of the Porahat Raja's family.

The States of Athgarh, Athmallık, Bamra, Baramba, Baud, Bonai, Daspalla, Dhenkanai Gangpur, Hindol, Kalakhandi, Khandpara, Narsinghpur, Nayagarh, Nilgiri, Pal-Lahara, Patna, Rairakho, Ranpur, Sonpur, Talcher, and Tigiria have no connected or authentic history They were first inhabited by aboriginal races who were divided into innumerable communal or tribal groups each under its own Chief or headman. These carried on incessant warfare with their neighbours on the one hand and with with their neighbours on the one hand and with the wild beasts of the forests on the other In course of time their hill retreats were penetrated by Aryan adventurers who gradually overthrew the tribal Chiefs and established themselves in their place. Tradition relates how these daring interlopers, most of whom were Rajputs from the north, came to Puri on a pilgrimage and remained behind to found the decreased dynastics. The Chiefs and kingdoms and dynasties The Chiefs of Baud and Daspalla are said to be descended from the same stock as Mayurbhan, and a Rajput origin is also claimed by the Rajas of Athmallik, Narsinghpur, Pal-Lahara, Talcher and Tigiria. Nayagarh, it is allegied, was founded by a Rajput from Rewah, and a scion of the same family was the ancestor of the present house of Khandpara. On the other hand, the Chiefs of a few States such as Athgarh, Baramba, and Dhenkanal owe their origin to favourites or distinguished owe their origin to lavouries or distinguished servants of the Ruling sovereigns of Orissa. The State of Ranpur is believed to be the most ancient, the list of its Chiefs covering a period of over 3,600 years. It is noteworthy that this family is of Khono origin and furnishes the only known instance in which, amid many vicissitudes, the supremacy of the original settlers has remained intact. The States acknowledged the suzerainty of the paramount power and were under an implied obligation to render assistance in resisting invaders; but in other respect neither the ancient kings of Orissa nor their successors, the Moghuls and

and fiction and long genealogical tables of doubtful accuracy, and contain very few features of general interest. The British conquest of Orissa from the Mahrattas which took place in 1803, was immediately followed by the submission of ten of the tributary States the Chiefs of which were the first to enter into treaty engagements.

The States have formed the subject of frequent legislation of a special character. They were taken over from the Mahrattas in 1803 with the rest of Orissa; but, as they had allower better that the state of the sta had always been tributary States rather than regular districts of the native Governments, they were exempted from the operation of the general regulation system. This was on the ground of expediency only and it was held that there was nothing in the nature of British relations with the proprietors that would proclude their being brought under the ordinary jurisdiction of the British Courts, if that should ever be found advisable. In 1882 it was held that the States did not form part of British India and this was afterward accepted by the Secretary of State.

The staple crop in these States is rice. The forests in them were at one time among the best timber producing tracts in India, but until lately forest conservancy was practically unknown. The States have formed the subject of frequent legislation of a special character.

The States of Bastar, Changbhakar, Chhuikhadan, Jaspur, Kanker, Kawardha, Khairagarh, Korea, Nandgaon, Raigarh, Sakti, Sarangarh, Surguja and Udalpur are scattered round the Chhattagarh Division in the Central Provinces to the different districts of which the majority of them were formerly attached.

Bastar.-This State is situated in the southeast corner of the Central Provinces. In area (13,602 square miles) it is the twelfth largest State in India and is very scattered and backward. A point of interest is that Bastar is the only State in India of which the late Chief was a Hindu lady She was the last descendant of an ancient family of Lunar Rajputs, which ruled over Warangal until the Mahommedan conquest of the Deccan in the 14th century A.D. when the brother of the last Raja of Warangal fied into Bastar and established a kingdom there. The Maharani of Bastar died in London in February 1936 and has been succeeded by her minor son, Maharaja Pravir Chandra Bhanj Deo as the Ruler of Bastar. From then till the days of the Mahrattas the State was virtually independent, its inaccessibility securing it from all but occasional raids of Mahommedan freebooters The Bhonslas of Nagpur imposed a small tribute on Bastar in the 18th century, and at various on Lastar in the 18th century, and at various times for delay in payment deprived it of the Sihawa tract in the Raipur district, and allowed the Raja of Jeypore in the adjacent Vizagapatar Agency of Madras to retain presession of the Kotapad tract, originally pledged to Jeypore by a Bastar Raja for assistance during family dissen sions. The dispute between Bastar and Jeypore over this land led to constant border distur bances, and was not finally settled till 1863, when the Government of India, while recognism Bastar's claim, finally made the tract over t Jeypore on the ground of long possession, o Mahrattas, ever interfered with their internal Bastar's claim, finally made the tract over tadministration. All the States have annals deypore on the ground of long possession, of the dynasties that have ruled over them; but condition of payment by Jeypore of Rs. 3,00

Bastar was recognised as a Feudatory State. Since then the State has made steady, if slow, progress, hampered by the innate convervatism of its aboriginal population, which has from time to time rebelled. The last rebellion in 1910 was due to oppression by minor State official and dislike of the rigorous forest policy then under introduction. After the rebellion the Raja had his powers reduced and a series of Diwans were appointed by the Central Provinces Administration. The State has since his death continued to be under Government management

Nearly 11,000 square miles are covered by forest of which about 3,000 square miles are reserves. Cultivation is therefore sparse. Rice additional and mustard are the chief crops. There is a large export of grain, timber and minor forest produce, particularly myrobalans. Most of the sal forest is leased for sleeper manufacture. There are more than 600 miles of gravel motorable road in the Mate. The applications of the sale of road in the State. The capital, Jagdalpur, on the Indrawati river is 184 miles, by motorable road, from Raipur in the Central Provinces.

Surguia .- Until 1905 this was included in Surguja.—Until 1905 this was included in the Chotanagpur States of Bengal. The most important feature is the Mainpat, a magnificent tableland forming the southern barrier of the State. The early history of Surguja is obscure, but according to a local tradition in Palamau the present Ruling family is said to be descended PH Katana, BA.

tribute, two-thirds of which was remitted from the tribute payable by Bastar. The present tribute paid by Bastar is Rs 18,000 a year.

On the formation of the Central Provinces the Bhonsla Raja. At the end of the eighteenth Mahratta army overran the State and compelled its Chief to acknowledge himself a tributary for century in consequence of the Chief having aided a rebellion in Palamau against the British an expedition entered Surguja and though order was temporarily restored, disputes again broke out between the Chief and his relations, necessitating British interference. Until 1818 the State continued to be the scene of constant lawlessness; but in that year it was ceded to the British Government under the provisional agreement concluded with Mudhoji Bhonsla of Nagpur, and order was soon established. The principal crops are rice and other cereals.

UNDER THE GOVERNMENT OF ASSAM.

Manipur.—The only State of importance, Dec. 1917, and K.C.S.T. in Jan. 1934. under the Government of Assam, is Manipur entitled to a salute of 11 guns. which has an area of 8,620 square miles and a population of 4,45,606 (1931 Census), of which about 58 per cent are Hindus and 35 per cent. animistic hill tribes. Manipur consists of a great tract of mountainous country, and a valley about 50 miles long and 20 miles wide, which is shut in on every side. The State adopted Hinduism in the early eighteenth century, in the reign of Pamheiba or Gharib Nawaz, who subsequently made several invasions into Burma. On the Burmese retaliating, Manipur negotiated a treaty of alliance with the British negotiated a treaty of alliance with the British in 1762. The Burmese again invaded Manipur during the first Burmese war, and on the conclusion of peace in 1826 Manipur was declared 1,80,000, are included under the Government independent. The chief event in its subsequent of the conclusion of the co clusion of peace in 1826 Manipur was declared independent. The chief event in its subsequent of Assam. Most of the States have treaties history was the intervention of the British in 1891 to establish the claim of Kula Chandra The two largest are Khyrim and Myllicm and Singh as Maharaja, followed by the treacherous the smallest is Nongliwai, which has a populamurder of the Chief Commissioner, Mr. Quinton, and the officers with him, and the withdrawal of a Chief or Siem. The Siemship usually the escort which accompanied him. From 1891 remains in one family. The succession was to 1907 the State was administered by the contributed from the body of creating legical treatments and the contributed from the body of creating legical treatments. Political Agent, during the minority of H. H. constituted from the heads of certain clans but Sir Chura Chand Singh. The Raja was invested in recent years there has been a tendency to with ruling powers in 1907 and formally installed broaden the elective basis. The constitution of

The administration of the State is now conducted by H. H. the Maharaia, assisted by a Durbar, which consists of a President, who is usually a member of the Indian Civil Service, his services being lent to the State by the Assam Government, three ordinary and three additional members, who are all Manipuris. The staple crop of the country is rice. Forests of various kinds cover the great part of the mountain ranges.

on the gadi in 1908. For his services during a Khasi State has always been of a very demo-the War the hereditary title of Maharaja was eratic character, a Siem exercising but little conferred on him. He was made a C.B.E. in control over his people.

Rampur State.—The State of Rampur was founded by Nawab Sayed Ali Mohammad Khan Bahadur in the middle of the 18th century and his dominions included a considerable portion of what is now known as Rohilkhand The founder belonged to the famous Sayeds of the Barcha clans in the Muzaffarnagar district and was a statesman of remarkable ability. He rendered invaluable services to the Moghal Emperor who recognised him as Ruler of Rohilkhand.

Upon his death, his Kingdom underwent many vicissitudes and was considerably reduced in size during the reign of his son Nawab Sayed Faizulla Khan Bahadur. The Province of Rohilkhand had now passed into the hands of the East India Company. Nawab Sayed Faizulla Khan Bahadur was most loyal and true to the British Government to whom he always looked up for help during those unsettled days and he gave tangible proof of his loyalty when during the war against France he offered all his cavalry, 2,000 strong to the British Govern-ment in 1878 and received the following message of thanks from the then Governor-General:-

"That in his own name as well as that of the Board, he returned him the warmest thanks for this instance of his faithful attachment to the Company and the English Nation.

Another opportunity arose for the ruler of Rampur to evince his steadfast loyalty and devotion to the Imperial cause on the outbreak of the Mutiny of 1857. His Highness Nawab Sir Sayed Yusuf Alı Khan Bahadur occupied the Musnad of Rampur in those days From the very start till peace was re-established in the country, he was lavish in his expenditure of men and money on the side of the BritishGovernment, he fought their battles, saved the lives of many Europeans whom he provided with money and other means of comfort and had so much established his reputation as a good administrator that he was placed in charge of the Moradabad district. These signal services were recognised by the Government by the grant of an Illaqa besides ether marks of distinction.

The reign of His Late Highness Nawab Sir Sayed Mohammad Hamid Ali Khan Bahadur stood out unique in many ways. Rampur made great strides in trade and commerce and in fact in every walk of life. He took keen interest in Education and did not only contribute

Three States: Rampur, Tehri and Benares handsome donations but made annual grants e included under this Government:— to the various educational institutions. He was no whit behind his compatriot in his loyalty to the British Government. The Great War of 1914 found him foremost in offering his personal services and all the resources of the State-men, money and material-to the British Government. The 1st Rampur Infantry was sent to East Africa and returned home after nearly four years' service and won the favourable remarks of high British Officers Besides the expenditure involved in this His Highness also participated in the Scheme of the Hospitalship Loyalty" and contributed one lakh of rupees towards the cost and upkeep of it. His other contributions to the various funds amounted to over half a lakh of rupees and he also subscribed Rs. 7,00,000 to the War Loans. At the time of the Afghan War, 1919, the I. S. Lancers and the Imperial Service Infantry were sent on garrison duty in British India.

> The present Ruler Captain His Highness Nawab Sayed Raza Ali Khan Bahadur succeeded his father on 20th June 1930. His Highness was born on 17th November 1906.

The permanent salute of the State is 15 guns and the annual income over fifty lakhs of rupees.

Tehri State (or Tehri-Garhwal).—This State lies entirely in the Himalayas and con-Tehri-Garhwal).-This tains a tangled series of ridges and spurs radiating from a lofty series of peaks on the border of Tibet. The sources of the Ganges and the Jumna are in it. The early history to the State is that of Garhwal District, the two tracts having formerly been ruled by the same dynasty since 688 A. D. Pradyunna Shah, the last Raja of the whole territory, was killed in battle fighting against the Gurkhas; but at the close of the Nepalese War in 1815, his son received from the British the present State of Tehri. During the Mutiny the latter rendered valuable assistance to Government. He died in 1859. The present Raja is Major H. H. Sir Narendra Shah Bahadur, K.C.S.I., who is 59th direct malelineal descendant from the original founder of the dynasty, Raja Kanak Pal. The principal products are rice and wheat grown on terraces on the hill sides. The State forests are very valuable and there is considerable export of timber. The Raja has full powers within the State. The strength of the State forces is \$30. Tehri is the capital but His Highness and the Secretarial Office are at Narendranagar for the greater para of the year, the summer capital being Pratapnagar, 8.000 feet above the sea-level.

Agent to the Governor-General: The Governor of the U. P. of Agra and Oudh.

Benares.-The kingdom of Benares under its Hındu Rulers existed from time immemorial and finds mention in Hindu and Buddhist literature. In the 12th century it was conquered by Shahab-ud-din Ghori and formed a separate province of the Mohammadan Empire. In the 18th century when the powers of Moghal Emperors declined after the death of Aurangzeb, Raja Mansa Ram an enterprising zamindar of Gangapur (Benares district) founded the State

of Benares and obtained a Sanad from the Emperor Mohammad Shah of Delhi in the name of his son Raja Balwant Singh in 1738. Raja Mansa Ram died in 1740 and his son Balwant Singh became the virtual ruler. During the next 30 years attempts were unsuccessfully made by Safdui Jang and after him by Shuja-uddaula of Oudh to destroy the independence of the Raja and the Fort of Ramnagar was built on the bank of the Ganges opposite the Benares City. Raja Balwant Singh died in 1770 and was succeeded by his son Chet Singh. He was expelled by Warren Hastings. Balwant Singh's daughter's son Mahip Narain Singh was blood out the state of th placed on the qadi. The imbecile and there was The latter proved an imbecile and there was maladministration which led to an agreement in 1794 by which the lands, held by the Raja in his own right which was granted to him by the British Govern-ment, were separated from the rest of the province. The direct control of the latter was assumed by the Government and an annual income of one lakh of rupees was assured to the Raja while the former constituted the 1931 and the hor apparent Maharaj Kumar Domains. Within the Domains the Raja had Ribhuti Narain Singh born on November 5, 1927, revenue powers similar to those of a Collector adopted by His Highness the Maharaja Bahadur in a British district. There was thus constituted shis son an i successor on the 24th June, 1934.

what for over a century was known as the Family Domains of the Maharaja of Benares. On the 1st of April, 1911, the major portion of these Domains became a State consisting of the perganas of Bhadohi and Chakia (or Kera Mangraur) The town of Ramnagar and its neighbouring villages were ceded by the British Government to the Maharaja in 1918 and became part of the State. The Maharaja's powers are those of a Ruling Chief, subject to certain conditions, of which the most important are the maintenance of all rights acquired under laws in force prior to the transfer, the reservation to Government of the control of the postal and telegraph systems, of plenary criminal jurisdiction within the State over servants of the British Government and European British subjects, and of a right of control in certain matters connected with Excise.

The present ruler is Captain H. H. Maharaja Sir Aditya Naram Singh Bahadur, K.C.S.I., who was born in 1874 and succeeded to the State in

PUNJAB STATES.

There are 14 States of the Punjab which since 1921, have been in direct political relation with the Government of India through the Hon'ble

the Agent to the Governor-General, Punjab States, who resides at Lahore. The following are details .-

Name.				Permanent salute in guns,	Area (Sq. miles.)	Population (1931)	Approximate revenue in lakhs of rupees.

* Under administration. † Personal salute raised to 13 guns. ‡ Brought under the Political control of the A. G. G. Punjab States in April 1933.

Bahawalpur.-Bounded on the North-East by the District of Ferozepur; on the East and South by the Rajputana States of Bikaner and Jaisalmere: on the South-West by Sind, on the North-West by the Indus and Sutlej rivers. Area, 15,000 square miles.

This State is about 300 miles in length and about 50 miles wide, is divided lengthwise into three great strips. Of these, the first is a part of the Great Indian Desert; the central track which is as barren as uplands of the Western secured the independence of the Nawab within Punjab; has however been partly rendered capable of cultivation by the network of Sulej valley Canals constructed recently; and the Yalley Canals constructed recently; and the Afghan Warthe Nawab estate to the third a fertile alluvial tract in the river valley is called the Sind. The State is a partner in the oreat Sutlej Valley Project.

The ruling family is descended from the Abbasaide Khalifas of Baghdad. The tribe originally came from Sind, and assumed independence during the dismemberment of the Durrani Empire in the Treaty of Lahore in 1809. Ranjit Singh was confined to the right bank of the Sutlej.

was in the hands of the British authorities The present ruler is Major Dr. His Highness Rukmud-Daula Nusratji- Jang-Sarfuddaula Hafizul-Mulk Mukhlisud-Daula, Munuddaula Nawab Sir Sadiq Muhammad Khan Sahib Bahadur Abbasi V., LL.D. G.O. 1.E., K.C.S. I., K.C.V.O., who was born in 1904 and succeeded in 1907. During his minority the State was managed by a Council of Regency which ceased to exist in Marc 1924, when His Highness the Nawab was invested with full power. His Highness is now assisted in the administration of his State by a Prime Minister, Izzat Nishan, Imad-ul-Mulk, Rai Rais-ul-Wozra, Khan Bahadur, Mr. Nabi Buksh Mahomed Husain, M.A., LL.B., C.I.E., K.O.A.O., BO.C.S., a Public Works and Revenue Minister, Mr. C.A. H. Townsend, Cl.E., a Minister for Law and Justice, Raft-us-Shan, Iftakharul-Mulk, Lt-Col. Magbool Hasan Kureishy, M.A., LL.B., CAO, CH.O., a Home Minister, Amin-ul-Mulk, Undat-ul-Umra, Sardar Mohammad Amir Khan, C.H.O., an Army Minister Majo. General Sahibzada Hajl Mohammad Dilawar Khan Abbasi, M.B.E. C. H.O., CAO, and a Minister for Commerce, Mehta Udho Dasa, B.A., I.B.

The chief crops are wheat, rice and millet. The Lahore-Karachi branch of the North Western State Railway passes through the State. The State supports an Imperial Service combined infantry, in addition to other troops. The capital is Bahawalpur, a walled town built in 1718.

Income from all sources over 90 lakhs. Languages spoken Multanı or Western Punjabi (Jatki), and Marwari.

Agent to the Governor-General, Punjab States.— The Hon. Lt.-Col. H. Wilbeforce, Bell, C.I.E., K.O.I.E., C.B.E., I.O.S.

Chamba.—This State is enclosed on the west and north by Kashmir, on the east and south by the British districts of kanira and Gurdaspur, and it is shut in on almost very side by lotty hill ranges. The whole country is mountainous and is a favourite resort of sportsmen. It possesses a remarkable series of copper plate inscriptions from which its chronicle have been compiled.

Founded piobably in the sixth century by Marut, a Surajbansi Rajput, who built Brahmapura, the modein Barmaur, Chamba was extended by Meru Varma (680) and the town of Chamba built by Sahil Varma about 920. The State maintained its independence, until the

Moghal conquest of India.

Under the Moghals it became tributary to the empire, but its internal administration was not interfered with, and it escaped almost unscathed from Sikh aggression. The State first came under British influence in 1846. The part, west of the Ravi, was at first hauded over to Kashmir, but subsequently the boundaries of the State were fixed as they now stand, and it was declared independent of Kashmir. The present chief is H. H. Raja Ram Singh, who was born in 1890, and succeeded in 1919. The principal crops are rice, maize and millets. There are some valuable forests which were partly leased to Government in 1864 for a term of 99 years, but the management of them has now been retrocceed to the Chamba Durbar. The

mountain ranges are rich in minerals which are little worked. The principal road to Chamba town is from Pathankot, the terminus of the Amritsar Pathankot branch of the North-Western Railway. Chamba town, on the right bank of the Ravi, contains a number of interesting temples, of which that of Lakshmi Narayan, dating possibly from the tenth century, is the most famous.

Faridkot.-The Faridkot Rajas are sprung from the same stock as the Phulkin Chiefs having a common suce tor in Brar more remote by twelve generations than the celebrated Phul The Faridkot House was founded in the middle of the seventeenth Century. The pre-ent Ruler Faizand-i-Saadat-Nishan Hazraat-i-K a i s a r-i-Hind, Lt His Highness Raja Harindar Singh Brarbans Bahadur was born on the 29th January 1915, succeeded to the Gaddi in 1918, and was invested with full Ruling Powers in October1934. His Highness personally administers the State assisted by his younger brother Kanwar Minjitindar Singh Bahadur, Military Sceretary, and an efficient Cabinet of three other Secretaries headed by Sardar Bahadur Sardar Indar Singh. B.A., Chief Secretary The State comprises an area of 643 square miles with a population of 1,69,364 souls and has an annual income of 18 lakhs. The Ruler is entitled to a salute of 11 guns and a visit to and return visit from the Viceroy. The State Forces consist of the State Sappers and Household Troops (Cavalry and Infantry). Faridkot, the Capital town, hes on the main Delhi-Bhatinda Lahore Section of the North Western Railway

Jind.—Jind is one of the three Phulkian States (the other two being Patiala and Nabha). Its area is 1,268 square miles, with a population of 324,676 souls and an income of 25 lakhs.

The history of Jind as a separate State dates from 1763, when Kaja Gajpat Singh, the maternal grandfather of Malanga Ranjit Singh, and great grandson of the famous Phut, established his principality. He was succeeded by Raja Bhag Singh, who greatly assisted Lord Lake in 1805. His grandson Raji Sangat Singh was succeeded by the nearest male collateral Raja Sarup Singh in 1837. In the crisis of 1857 Raja Sarup Singh in 1837. In the crisis of 1857 Raja Sarup Singh rendered valuable services to the British and was rewarded with a grant of nearly 600 square miles of land, known as Dadri territory. He was succeeded by his son Mahrija Raghbir Singh, who gave help to the British Government on the occasion of Kuka outbreak (1872) and the 2nd Afghan War (1878). The present ruler Maharaja Ranbir Singh was born in 1879, succeeded in 1887, and invested with full powers in 1899. The State rend-red exemplary services in the Great European War. It supplied 8,673 men to the Indian Army and Imperial Service Troops and doubled the strength of its Imperial Service Infantry The total contribution mounted to nearly 35 lakhs, in gifts of cash, materials, alumals and loan.

His Highness enjoys a salute of 15 guns. The capital is Sangrur, which is connected by a State Railway with the North-Western Railway. The principal executive Officer of the State is called Chief Minister.

Ruler.—Colonei His Highness Farzand-i-Dilband Rasikh-ul-Itikad, Daulat-i-Inglishia Raja-i-Rajgan Maharaja Sir Ranbir Singh Rajendra Bahadur, G.O.I.E., K.C.S.I., etc.

Kapurthala .- This State consists of three detached pieces of territory in the great plain of the Juliundur Doab. The ancestors of the ruler of Kapurthala at one time held possessions both in the Cis and Trans-Sutlej and also in the Bari Doab. In the latter lies the village of Ahlu whence the family springs, and from which it takes the name of Ahluwalia. When the Julundur Doab came under the dominion of the British Government in 1846, the estates north of the Sutlej were maintained in the independent possession of the Kapurthala Ruler, conditional on his paying a commutation in cash for military service engagements by which he had previously been bound to Maharaja Ranjit Singh, of Lahore. This annual tribute of Rs. 1,31,000 a yearwas remitted by the Government of India in perpetuity in (1924) in recognition of the splendid war record and uniformly efficient administration of the State. The Bari Doab estates are held by the head of the House as a jaghir in perpetuity, the civil and police jurisdiction remaining in the hands of the British authorities. For good services during the Mutiny, the present Maharaja's grandfather was rewarded with a grant of other estates in Oudh, which yield a large annual income equal to those of Kapurthala State. The present Ruler's titles are Col. H. H. Farzand-I-Dilband Rasikhul-Itikad Daulat-I-Inglishia Raja-I-Rajagan Maharaja Jagatjit Singh Bahadur Maharaja of Kapurthala, G.C.S.I (1911), G.C.I.E. (1918), G.B.E. (1927) who was born on 24th November 1872 and succeeded his father His Highness the late Raja-i-Rajgan Kharak Singh of Kapurthala in 1877. He was granted the title of Maharaja as an hereditary distinction in 1911. His salute was raised to 15 guns and he was made Honorary Colonel of the 45th Rattrays Sikhs. The Maharaja reocived the Grand Cross of the Legion d'Honneur from the French Government in 1924, and possesses also the Grand Cross of the Order of Carlos 3rd, of Spain, Grand Cross of the Order of the Star of Roumania, Grand Cross of the Order Menelek of Abyssinia, Grand Cordon of the Order of the Nile of Egypt, Grand Cordon of the Order of Morocco, Grand Cordon of the Order of Tunis, Grand Cross of the Order of Chili, Grand Cross of the Order of the Sun of Peru, Grand Cross of the Order of Cuba; represented Indian Princes and India on the League of Nations in 1926, 1927 and 1929, celebrated the Golden Jublice of his reign in December 1927.

The rulers of Kapurthala are Rajput Sikh, and claim descent from Rana Kapur, a distinguished member of the Rajput House of Jaisalmer. Only a small proportion of the population however are Sikhs, the majority being Mahomedans. The chief crops are wheat, gram, maize, cotton and sugarcane. The town of Sultanpur in this State is famous for hand-printed cloths. Phagwara is another important town in the State and is very prosperous on account of its grain markets and factories for manufacture of agricultural implements, and metallic utensis of household use. The situation of this town on the main railway line and the consequent facilities of export and import make its importance still greater and this is the chief commercial town in the State. The main line of the North-Western Railway passes through part of the State and the Grand Trunk Road

runs parallel to it. A branch railway from Juliundur City to Ferozepur passes through the capital. The Imporial Service and local troops of the State have been re-organized and are now designated as Kapurthals State Forces. The State Troops, the strength of which was raised during the Great War, to nearly 2,000, served the Empire in that crisis in East Africa, Mesopotamia and on the Afghan Frontier. Primary education is free throughout the State, and it spends a large proportion of its revenues on its Education Department. The State also possesses a Legislative Assembly which was created by the present Maharaja on the occasion of the Silver Jubilee of his reign in 1916. The capital is Kapurthala which has been embellished by the present Maharaja with a Palace of remarkable beauty and grandeur and with various buildings of public utility. The town boasts modern amenities such as electric light, water-works,

Political Officer The Hon'ble Agent to the Governor-General, Punjab States, Lahore.

Malerkotla.—This State consists of a level sandy plain unbroken by a hill or stream, bounded by the district of Ludhiana on the north, by Patiala territory on the east and south and by the Ludhiana District, Patiala and Nabha territories on the west. The Rulers (Nawabs) or Malerkotla are of "Kurd", descent who came originally from the Province of "Sherwan" and settled in the town of "Sherwan" north of Porsia, and after settling for a time in Afghanistan near Ghazni came to India and settled at Maler, the old capital of the State in 1442. Originally they held positions of trust under the Lodhi and Moghal Emperors. As the Moghal Emperogan to sink into decay they gradually became independent. They were in constant feuds with the newly created adjacent Sikh States. After the victory of Lawari, gained by the British over Sindhia in 1805, when the Nawab of Malerkotla joined the British Army, the British over Sindhia in 1805, when the Nawab of Malerkotla joined the British Army, the British Government succeeded to the power of the Mahrattas in the districts between the Sutlej and the Jumna. The State entered into political relations with the British Government in 1809. The present Ruler is Lt.-Col. His Highness Nawab Sir Ahmad Ali Khan, Bahadur, K.C.S.I., K.C.I.E., who was born in 1881 and succeeded in 1908. He was created Hony. Major in the Indian Army in June 1916 and promoted to the rank of Lt.-Col. in December 1919.

The chief products are cotton, sugar, poppy, aniseed, mustard, ajwain, methi, tobacco, garlic, onions and all sorts of grains.

The State maintains Sappers, Infantry, Cavalry and Artillery. The capital is Maler-kotla. The population of the town is 30,000. Annual revenue of the State is about 16 lakhs.

Mandi is an Indian State in the Punjab Political Agency lying in the upper reaches of Bias river which drains nearly all its area. Its area is 1,200 square miles and it lies between 310-23' North Lat.; and 760-22' East Long.; and is bounded on the east by Kulu; on the south by Suket and on the north and west by Kangra. It has an interesting history of

considerable length which finally resulted in its entering into a treaty with the British in 1846.

The present Ruler, Capt. His Highness Raja Sir Jogindar Sen Bahadur, K.O.S.I., assumed full powers in February 1925 His Highness married the only daughter of His Highness the Maharaja of Kapurthala.

The Mandi Hydro-Electric Scheme was formally opened by His Excellency the Viceroy in March, 1932. The principal crops are rice, maize, wheat and millet. About three-fifths of the State are occupied by forests and grazing lands. It is rich in minerals. The capital is Mandi, founded in 1527, which contains several temples and places of interest and is one of the chief marts for commerce with Ladhakh and Yarkand.

Nabha.—Nabha which became a separate State in 1763 is one of the 3 Phulkian States —Nabha, Patiala and Jind—and though second in point of population and revenue of the 3 sister States, it claims seniority being descended from the eldest branch. It consists of two distinct parts, the main portion comprising 12 separate pieces of terrkory scattered among the other Punjab States and Districts, forms the City of Nabha and the Nizamats of Phul and Amloh; the second portion forms the Nizamat of Bawal in the extreme south-east of the Punjab on the border of Rajputana; this Nizamat of Rawal was subsequently added to its territory as a reward from the British Government for the loyalty of the Rulers of Nabha. The State now covers an area of about 1,000 square miles and has a population of about 3 lakhs. The State maintains one battalion of Infantry known as the Nabha Akal Infantry under the Indian States Forces Scheme consisting of 482. For the preservation of the peace there is also a Police force consisting of about 400 men.

The State is traversed by the main and 3 branch lines of the N. W. Railway and the B. B. & C. I. crosses the Nizamat of Bawat. A portion of the State is irrigated by the Sirhind Canal. The crops of the State are gram, pulses, bajra, sugarcane, cotton, wheat and barley, to facilitate trade the Durbar has opened grain markets and Banks near the principal railway station within the State territory. The chief industries of the State consist of the manufacture of silver and gold ornaments, brass utensils, and cotton carpets, lace and gota, etc. There are some ginning factories and a cotton steam press in the State which are working successfully. In 1923 an inquiry was held into certain matters in dispute between the Patiala and the Nabha Durbars which showed that the Nabha Police had fabricated cases against persons connected with the Patiala State with the object of injuring them through the Patiala Durbar. As a result, the Maharaja Ripudaman Singh, who was born in 1883 and succeeded his father in 1911 entered into an agreement with the Government of India whereby he voluntarily separated himself from the administration and the control of the State was accordingly assumed by the Government of India. In consequence of repeated breaches of the agreement by the Maharaja, he was in February 1928 deprived of the title

of Maharaja, His Highness and of all rights and privileges pertaining to the Ruler of the State, and his eldest son, Partab Singh, was recognized as Maharaja in his stead.

Patiala .- This is the largest of the Phulkian States, and the premier State in the Punjab. Its territory is scattered and interspersed with small States and even single villages belonging to other States and British districts. It also comprises a portion of the Simla Hills and territory on the border of Jappur and Alwar States. Area of 5,932 square miles. Population 16,25,520. Gross income Rs. one crore and forty lakhs. Its history as separate State begins in 1762. The present Ruler, Lieutenant-General His Highness Farzand-i-Khas Daulati-Inglishia Mansur-ul-Zaman Amir-ul-Umra Maharaja Dhiraj Raj Rajeshwar, Sri Maharaja-i-Rajgan Sir Bhupindra Singh Mohinder Bahadur, Yadu Vanshavatans Bhatti Kul Bhushan, G.C.S.I., GCIE, G.CV.O, GBE., A.D.C., LL.D, was born in 1891, succeeded in 1900, and assumed the reins of government in 1909 on attaining majority. His Highness the Maharaja Dhiraj enjoys at present personal salute of 19 guns and he and his successors have been exempted from pre-senting Nazar to the Viceroy in Durbar in perpetuity. The principal crops are grain, barley, wheat, sugar-cane, rapesced, cotton and tobacco. A great part of the State is irrigated by the Sirhind and Western Jumna Canal distributaries. It possesses valuable forests. The State is rich in antiquities, especially at Pinjaur, Sunam, Sirhind, Bhatinda, Narnaul, etc. One hundred and thirty-eight miles of broad-gauge railway line comprising two Sections—from Rajpura to Bhatinda and from Sirhind to Rupar-have been constructed by the State at its own cost. The North-Western Railway, the E. I. Railway, the B. B. & C. I. Railway and the J. B. Railway traverse the State. His Highness maintains a contingent of two regiments of Cavalry and four battalions of Infantry-one battery of Horse Artillery.

The State maintains a first grade college which imparts free education to state subjects. Primary education is also free throughout the State. The Durbar sauctioned a scheme of compulsory education in 1925.

Since the State entered into alliance with the British Government in 1804 and 1809 A.D. it has rendered help to the British Government on all critical occasions such as the Gurkha War of 1814-15, the Sikh War of 1845, the Mutiny of 1857, the Afghan War of 1878-79, and the Tirah and N. W. F. campaign of 1897. On the outbreak of the European War His Highness placed the entire resources of his State at the disposal of His Majesty the King-Emperor and offered his personal services. The entire Imperial Service Contingent was on active service throughout the period of the War and served on various fronts in Egypt, Gallipoli, Mesopotamia and Palestine, winning numerous distinctions. Two mule and one camel corps were raised and placed at the service of the British Government for the period of the War, and in addition to furnishing nearly 28,000 recruits for the British Indian Army and maintaining the State Imperial Service Contingent

money and material. Again in 1919 on the outbreak of hostilities with Afghanistan His Highness served personally on the Frontie; on the Staff of the General Officer Commanding and the Imperial Service Contingent saw active service towards Kohat and Quetta fronts. For his services on the N. W Frontier His Highness

was mentioned in despatches.

His Highness was selected by His Excellency the Viceroy to represent the Ruling Princes of India at the Imperial War Conference and Imperial War Cabinet in June 1918 and during his stay in Europe His Highness paid visits to all the different and principal fronts in Belgium, France, Italy and Egypt (Palestine) and received the following decorations from the allied Sovereigns and Governments.—(a) Grand Cross of the Order de Leopold, (b) Grand Cross of the Legion of Honour, France, (c) Grand Cross of the Order of the Crown of Italy, (d) Grand Cross of the Order of the Crown of Roumania and (f) Grand Cross of the Order of the Order of St. Saviour of Greece (1926).

His Highness represented the Indian Princes at the League of Nations in 1925. In 1926, he was elected Chancellor of the Chamber of Princes (Narendra Mandal) He was re-elected Chancellor of the Chamber in 1927-28-29-30 In 1930, His Highness led the Princes' delegation to the Round Table Conference He was again elected Chancellor of the Chamber of Princes in

1933.

Sirmur (Nahan).—This is a hilly State in the Himalayas under the Political control of the Hon'ble the Agent te the Governor-General, Punjab States, Lahore. Its history is said to date from the 11th century. In the eighteenth century the State was able to repulse the Gurkha invasion, but the Gurkhas were invited to aid in the suppression of an internal revolt in the State and they in turn had to be evicted by the British. In 1857 the Raja rendered valuable services to the British, and during the second Afghan War he sent a contingent to the North-West Frontier. The present Prince is H. II. Maharaja Rajendra Prakash who was born in 1913 and succeeded in 1933. The main agricultural feature of the State is the recent development of the Kiarda Dun, a fertile level plain which produces wheat, gram, rice, maize and other crops. The State forests are valuable and there is an iron foundry at Nahan which was started in 1867 but, being unable to compete with the imported iron, is now used for the manufacture of sugarcane crushing mills. The State supports a Corps of Sappers and Miners which served in the Great War. It was captured with General

Townshend's force at Kut-al-Amara but the Corps was reconstituted and sen; to service.

Khairpur.—The state of Khairpur les in Upper Sind between 26°-10° and 27°-46° North Latitude and 68°-20° and 70°-14° East Longitude It is bounded on the East by Jodhpur and Jessalmere territories and on the North, West and South by British Districts of Sind. maximum temperature in summer is 117° in the shade and the maximum is 117° in the shade and the minimum in winter 30° The nearest hill station is Quetta, 5,500 feet above sea level Rainfall is scarce, the last 13 years' average being 3°-59" The area of the State is about 6,050 square miles. The population of the State according to the census of 1931 is 2,27,183 Souls. The majority of them are cultivators. Others are engaged in trade, State services and labour By religion they are mainly Sum Mushins, but the Ruler and his family and some others are Shias Hindus form the minority community The State's revenue from all community The State's revenue from all sources calculated on the average of the past five years amounts to Rs 18,12,918. The relations of the State with the British Government are those of subordinate alliance. nent are those of subordinate aniance. The State pays no tribute either to the British Government or to any other State. The language of the State is Sindhi Urdu and English are also spoken The chief product of the State is grain, which is cultivated on irrigation canals taking off from the Indus river at the Lloyd Barrage and to a small extent on wells Cotton, oil-seeds, ghee, hides, tobacco, Fuller's earth ("net"), carbonate of Soda ("Kharo chaniko"), and wool are also produced. The manufactures comprise cotton, silken and woollen fabrics, lacquer work, carpets and pottery

The Rulers are Muslim Talpur Balochs and belong to the Sha sect Previous to the accession of this family on the fall of the Kalhora dynasty of Sind in 1783, the history of the State belongs to the general history of Sind. In that year Mir Fatchali Khan Talpur established himself as Rulei of Sind and subsequently his nephew, Mir Sohrab khan Talpur, founded the Khairpur Branch of the Talpur family in 1882 the individuality of the Khairpur State was recognized by the British Government. The Ruler is a first class prince and is entitled to a permanent salute of 15 guns outside and 17 guns inside the State limits.

The last Ruler, His Highness Mir Ail Nawaz Khan Talpui, died on 25th December, 1935 His only son Mir Faiz Mahomed Khan Talpur is the Waliahd

Agent to the Governor-General, Punjab States — The Hon Lt -Col H. Wilberfore c-Bell, CI E

UNDER THE GOVERNMENT OF BURMA.

The States under this Government comprise the Shan States which are included in British India though they do not form part of Burma proper and are not comprised in the regularly administered area of the Province and the Karenni States which are not part of British India and are not subject to any of the laws in force in the Shan States or other parts of Burma.

The Shan States comprise the two isolated under States of Hsawnghsup and Singkaling Hkamti in States.

the Upper Chindwin District under the supervision of the Commissioner, Sagaing Division, the eight petty village communities under separate hereditary Chiefs known as Hkamti Ling in the Myttkyina District and the two main divisions of the Shan States known as the Northern and Southern Shan States numbering six and thirty States respectively which are under the Commissioner, Federated Shan States

Heavinghoup with an area of 529 square miles and a population of 7,239 lies between the 24th and 25th parallels of latitude and on the 95th parallel of longitude between the Chindwin river and the State of Manipur

Singkaling Hkamti has an area of 983 square miles and a population of 2,157 and lies on the 96th and 90th parallels of latitude and longitude respectively.

The Hkamti Long States have an area of 200 square miles with a population of 5,349 and lie between the 27th and 28th parallels of latitude on the Upper Waters of the N'Mai branch of the Irrawaddy.

The Northern Shan States (area 20,156 square miles and population 636,107) and the Southern Shan States (area 36,157 square miles and population 870,230), form with the unadministered Wa Statis (area about 2,000 square miles) and the Karenni States, a huge triangle lying roughly between the 19th and 24th parallels of latitude and the 96th and 102nd parallels of longitude with its base on the plans of Burma and its apex on the Mehkong river

The population consists chiefly of Shans who belong to the Shan group of the Tai Chinese family; the remainder belong chiefly to the Wa-palaung and Mon Khmer groups of races of the Austro-Assatic brand of the Austric family, or to the Karen family which Sir George Grievson now proposes to separate from the Tsi Chinese family There are also a number of Kachins and others of the Tibeto Burman tamily. The Shans themselves shade off imperceptibly into a markedly Chinese race on the frontier. Buddhism and Animism are the principal religions.

The climate over so large an area varies greatly. In the narrow lowlying valleys the heat in summer is excessive. Elsewhere the summer shade temperature is usually 80 to 95° Fahr. In winter frost is severe on the paddy plains and open downs but the temperature on the hills is more equable. The rainfall varies from 50 to 100 inches in different localities

The agricultural products of the States are rice, pulses, maize, buckwheat, cotton, sessamum, groundnuts, oranges and pineapples

Land is held chiefly on communal tenure but unoccupied land is easily obtainable on lease from the Chiefs in accordance with special rules for non-natives of the States. Great spaces of the States are suitable for cattle, pony and mule breeding and in the Northern State-Chinese settlers appear to have found the latter a very paying proposition.

The mineral resources of the States are still unexplored. The Burma Corporation have a concession for silver, copper, lead and zinc in the Northern States which they claim to be the richest in the world. The Mawson area in the Southern States is also rich in lead. Lignite and iron ore of a low grade are found in many places.

Lashio, the headquarters of the Northern Shan States, is the terminus of the Myohaung-Lashio

The Burma Corporation's narrow-gauge private railway track 44.49 miles long connects their Bawdwin mine with the Burma Railways system at Namvao.

The Southern Shan States are served by the Burma Railways branch line Thazi to Heho miles) which has been extended 187 Shwenyaung, 98 miles from Thazi.

Taunggyi, the headquarters of the Southern Shan States, is connected with Thazi by a well-graded motor road. The States vary much in size and importance. The largest State is Kengtung with an area of 12,400 square miles and population 225,894.

Hsipaw with an area of 4,400 square miles and population 148,731 is the richest State with a gross revenue of Rs. 10,62,418.

The Sawbwas of Kengtung, Hsipaw, Yawnghwe and Mongnai have salutes of nine guns while the Mong Mit Sawbwa has a personal salute of the same number.

Administration.

Under the Burma Laws Act, 1898, the Civil, Criminal and Revenue administration of every Shan State is vested in the Chief of the State subject to the restrictions specified in the sanid of appointment granted to him and under the same Act the law to be administered in each State is the customary law of the State so far as it is in accordance with justice, equity and good conscience and not opposed to the law in force in the rest of British India. The customary law may be modified by the Governor who has also power to appoint officers to take part in the administration of any State and to regulate the powers and proceedings of such officers. The chiefs are bound by their san ds to follow the advice of the Superintendents appointed but subject to certain modifications which have been made in the customary law relating to criminal and civil justice have more or less maintained the semi-independent status which was found existing at the annexation of Upper Burma.

In 1920, Sir Reginald Craddock, Lieutenant-Governor of Burma, proposed a scheme for the sanction of the Secretary of State under which the Chiefs of the Northern and Southern Shan States have agreed to federalise the departments of Government in which they had been previously largely dependent on contributions from the Provincial Funds. Under this scheme no interference is contemplated in the internal management of the States and the Chiefs continue to collect their taxes and be responsible for law and order, maintain Courts for the disposal of criminal and civil cases, appoint their own officials and control their own subjects under the advice of the Superin-tendents. But the Federation is responsible for the centralised Departments of Public Works, Medical, Forests, Education, Agriculture and to a small extent Police. In place of the individual tribute formerly paid by them the Chiefs contribute to the Federation a proportion of their revenue which amounts loughly to the expenditure hitherto incurred by them on the heads of administration now centralised Branch of the Burma Railways (178 miles) and while the Provincial Government surrenders to is also connected with Mandalay by a cart road. the Federation all provincial revenue previously

derived from the States to enable it to maintain the services at the same degree of efficiency formerly enjoyed. The Federation on the other hand makes a payment of a fixed proportion of its revenue to the Provincial Treasury in place of the individual contributions of the Chiefs. Under this scheme the Federation is a sub-entity of the Burma Government, is self-contained and responsible for its own progress. The Chiefs express their views on Federal and general matters through a Council of Chiefs consisting of all Chiefs of the rank of Sawbwa and four elected representatives of the lesser Chiefs. The Superintendents, Northern Shan States and the Commissioner of the Federated Shan States to whom the supervision of the Federation has been entrusted are exoffice members of the Council. The scheme was sanctioned and brought into force with effect from October 1922. The first meeting of the Council of Chiefs was formally opened by His Excellency the Governor Sir Spencer Harcourt Butler, G.C.I.E, K.O.S.I., I.O.S., In March 1923.

Karenni.

This district which formerly consisted of five States now consists of three as two have been amalgamated with others. It has a total area of 3,015 square miles and a population of 58,761.

It lies on the south of the Southern Shan States between Siam and the British district of Toungoo. The largest State is Kantarawadi with an area of 3,000 square miles and a population of 30,677 and a revenue of nearly 1½ lakhs of rupees. More than half of the inhabitants are Red Karens. An Assistant Political Officer is posted at Loikaw subject to the supervision of the Superintendent, Southern Shan States, who exercises in practice much the same control over the Chiefs as is exercised in the Shan States though nominally they are more independent than their Shan neighbours. Mineral and forest rights however in Karenni belong to the Chiefs and not to the Government. In the past substantial contributions from Provincial revenues have been made to the Karenni Chiefs for education and medical service The Chiefs are at present unwilling to surrender their special rights and join the Shan States Federation though very considerable advantages might accrue from their doing so.

The principal wealth of the country used to be in its teak timber and a large allen population was at one time supported by the timber trade. This has largely declined in the last few years and unless the Chiefs are prepared to deny themselves and close their forests they will soon disappear.

JAMMU AND KASHMIR STATE.

The territory known generally as the Jammu and Kashmir State, has between 32° and 37° N. and 73° and 80° E. It is an almost entirely mountainous region with a strip of level land along the Punjab border, and its mountains, valleys and lakes comprise some of the grandest scenery in the word. The State may be divided physically into three areas; the upper, comprising the area drained by the River Indus and its tributaires, the middle, drained by the Jhelum and Kishenganga Rivers, and the lower area, consisting of the level strip along the southern border, and its adjacent ranges of hills. The dividing lines between the three areas are the snow-bound inner and outer Himalayan ranges known as the Zopila and the Panchal. The area of the State is 84,258 square miles. Beginning in the south whete the great plain of the Punjab ends, it extends northwards to the high Karakoram mountains "Where three Empires Meet."

Briefly described, the State comprises the valleys of the three great rivers of Northern India, vz., the upper reaches of the Chenab and the Jhelum, and the middle reaches of the Indus The total population is 36,45,000 souls,

History —Various historians and poets have left more or less trustworthy records of the history of the valley of Kashmir and the adjacent regions. In 1586 it was annexed to the Moghul Empire by Akbar, Srinagar, the capital, originally known as Pravarapura, had by then been long established, though many of the fine buildings and to have been erected by early

Hindu rulers had been destroyed in the fourteenth century. In the reign of Sikandur, who was a contempolary of Tamerlane, a large number of Hindus was converted to Islam Jahangar did much to beautify the Valley, but after Aurangzeb there was a period of disorder and decay and by the middle of the eighteenth century the Suba or Governor of Kashmir had become practically independent of Delhi. Thereafter the country experienced the oppression of Afghan rule until twas rescued in 1819 by an army sent by Mahaiaja Ranjit Singh The Sikh rule was not more beneficial to the people than that of the Afghans The early history of the State as at present constituted is that of Maharaja Shri Gulab Singhji, a scion of the old Ruling Family of Jammu, who rose to eminence in the service of Maharaja Ranjit Singh of Lahore and was, in recognition of his distinguished services, made Raja of Jammu in 1820 He held aloof from the war between the British and tho Sikhs, only appearing as mediator after the battle of Sobraon (1846), when the British made over to him the valley of Kashmir and certain other areas in return for his services in re-establishing peace. His son, His Highness Maharaja Ranbir Singhji, a model Hindu and one of the staunchest allies of the British Government, ruled from 1857 to 1885. He did much to consolidate his possessions and evolve order in the frontier districts He was succeeded by his eldest son, His Highness Maharaja Sir Pratap Singhji, who died on 23rd December 1925, and was succeeded by His Highness the present Shri Maharaja Hari Singhii Bahadur.

The most notable reform effected in the State during the reign of the late Maharaja was the Land Revenue Settlement originally carried out under Sir Henry Lawrence and revised from time to time.

Administration.—For some years after the accession to the gadi of the late Maharaja, the administration of the State was conducted by a Council over which the Maharaja presided In 1905 this Council was abolished and the administration of the State was thenceforward carried on by His Highness the Maharaja with the help of a Chief Minister and a number of Ministers in charge of different portfolios This system continued until the 24th January 1922, when an Executive Council was inaugurated Very recently certain modifications have been introduced in the constitution.

The British Resident has his headquarters at Srinagar and Sialkot and there is also a Political Agent at Gligit A British Officer is stationed at Leh to assist in the supervision of the Cential Asian Tiade with India, which passes through Kashmir.

In the Dogras (Hindus and Mushms) the State has splendid material for the Army which consists of 8,600 troops Besides this, thousands of Dogras serve in the Indian Army.

Finance.—The financial position of the State is strong The total revenue including Jagurs, is about 2,70,00,000; the chief sources being land, forests, customs and excise and Sericulture. There is a reserve and no debt

Production and Industry.—The population is pre-eminently agricultural and pastoral. The principal food crops are rice, maize and wheat Oilseed is also an important crop Barley, cotton, suffron tobacco, beans, walnuts, almonds and hops are also grown Pears and apples, the principal fruits of the Valley are exported in large quantities. The State forests are extensive large quantities The State forests are extensive and valuable The principal species of timber valuable forests occur in Kishtwar, Kainah and Kamraj Illagas A survey of the mineral and Kahuraj Iliadas. A survey of the limited resources of the State is being conducted. The most noteworthy of the minerals expected to be found in the State are bauxite, coal, Fuller's earth, kaoline, slate, zinc, copper and tale Gold is found in Baltistan and Gilgit, sapplines in Paddar, aquamarines in Skaidu and lead in Uri The silk filature in Srinagar is the largest of its kind in the world Manufacture of silk is a very ancient industry in Kashmir Zain-ul-Abidin who Tuled from 1421 to 1472 is said to have imported silk weavers from Khurasan and settled them here Woollen (loth, shawls, carpets, papier machine and wood carving of the State are world famous The State partici-The Smaller Courts "and attracted many visitors An Industrial and Agricultural Exhibition is held in the State annually, where the products of indigenous arts and craftsmanship which Kashmir is famous are displayed His Highness' Government are maintaining a Visitors' Bureau at Simagai for the convenience of visitors, who are attracted by the scenery and charm of the beauty-spots of Kashmir

Communications.—Great efforts have been made and are being made towards the improvement of roads for wheeled traffic in the State. The Jhelum Valley road (196 miles) which links the Kashmir Valley with the Punjab and the North-Western Frontier Province is considered to be one of the finest motorable mountain roads in the world.

The Banihal Cart Road, 205 miles long, joins Kashmir with the North Western Railway system at Jammu-Tawai and is also a fine motorable road.

Roads for pack animals lead from Srinagar, the summer capital of Kashmir, to the frontier districts of Gilgit and Ladakh Internal village communications have also been much improved

The Janumu-Suchetgarh Railway, a section of the Wazirabad Sialkot branch line of the North Western Railway system, is the only Railway in the State. The mountainous nature of the country has so far prevented the extension of the line into the heart of the State.

Public Works.—In 1904 a flood spill channel above Srinagai was constructed to minimise the constant danger of floods in the River Jhelun A number of canals have been constructed at considerable expense both in Jammu and Kashmir The State has been recently connected with the telephone system of British India An aerodrome has been constructed five miles from Simagai, and it is hoped that an gual service between Lahore and Delhi and Kashmir will be established soon Good progress has been made with imigation, but the most important scheme of recent years has been the mistaliation of a large Electric Power Station on the Jhelum River and Mahora which was completed in 1907. The bridge over the Chenab at Aknur which was completed in 1907. The bridge over the Chenab at Aknur which was completed in 1905 at a cost of Re. 4 lakhs, has the longest unsupported span in India.

Education—According to the last census of the State, there were 1,23,800 persons able to read and write of whom 9,000 only were ismales. In other words, four per cent of all persons aged 5 or more could rend and write Among males 60 in every 1,000 persons could read and write. The number of educational metatutions including two Arts Colleges 1s 1,336. The number of scholars in 1933-34 was 85,646. Nearly 28 per cent boys and 6 per cent grite of the school-going age were at school. In Minicipal areas education for boys has been made compulsory since 1929.

Reforms.—One of the important reforms

Reforms.—One of the important icforms connected with the present Mahataja's reign has been the establishment of an independent High Court of Judicature modelled on British High Courts important legislative measures passed by His Highness' Government in recent years include the raising of the age of marriage to 14 for Erris and 18 for boys, and the Aguiculturists' Rehef Regulation meant to cope with the problem of rural indebtedness

As sign of constitutional progress of the State may be mentioned the freedom granted to the press, and the introduction of the State Assembly. Over 30 newspapers are in existence in the State, and the Assembly which has a non-official majority has already held three sessions, during a year and a half of its existence.

THE CHAMBER OF PRINCES.

as one of the results of the Report on Indian constitutional reform presented to Parliament by Mr. Montagu, Secretary of State for India and H. E. Lord Chelmstord, Viceroy and Gover-nor-General of India, in 1919. The proposal was and H. E. Lord Chelmstord, Viceroy and Gover-of Patial. The Chamber selects by vote its nor-General of India, in 1919. The proposal was own officers, who are the Chambellor, a pro-that the Chamber should exist as a permanent Chancellor to act for him in his absence out of consultative body, with the Viceroy as President and the members composing the Chamber dent and the members composing the unamour consisting mainly of the Princes and Chiefs having salutes, or whose membership might otherwise be considered desirable by the Viceroy. Certain smaller Chiefs were grouped and were given the privilege of nominating a member to represent them from year to year. The Chamber is a recommendatory body, which

The Narendra Mandal, or Chamber of Princes | The Chamber was formally inaugurated by came into existence, with the earnest co-operation of a number of leading Princes themselves | arv1921. It meets regularly once a year and arv1921. It meets regularly once a year and the agenda of subjects for discussion is framed and proposed by the Chancellor of the Chamber who at present is His Highness the Maharajah India and a Standing Committee of the Chamber. meetings the subjects to be discussed them. This Committee considers before the annual

Until 1929, the proceedings of the Chamber were considered as confidential and there was no admittance of the general public to its meetings. At the annual session in February 1929, the Princes passed a resolution by which performs its functions under a constitution approved by the Secretary of State and it questions submitted to it concerning the Princes and their rights and privileges generally and their position in imperial affairs.

Indian States' Tribute.

Many of the States pay tribute, varying in amount according to the circumstances of each case, to the British Government. This tribute is frequently due to exchanges of territory or settlement of claims between the Governments, but is chiefly in lieu of former obligations to supply or maintain troops. The actual annual receipts in the form of tribute and contributions from Indian States are summarised in the following table. The relations of the States to one another in respect of tributes are complicated, and it would serve no useful purpose to onter upon the question. It may, however, be mentioned that a large number of the States of Kathia-war and Gujarat pay tribute of some kind to Baroda, and that Gwalior claims tribute from some of the smaller States of Central India :-

States paying tribute directly to the Government of India.

It was announced at the Coronation Durbar of 1311 that there would in future be no Nazarana payments on successions.

Foreign Possessions in India.

torial possessions in the Indian Peninsula.

The Portuguere possessions in India, all of which are situated within the limits of Bombay Presidency, consist of the Province of Goa on the Arabian Sea Coast; the territory of Daman with the small territory called Pragana-Nagar-

Portugal and France both hold small terri-rial possessions in the Indian Peninsula.

Avely on the Gujarat Coast, at the entrance to the Gulf of Cambay; and the little island The Portuguere possessions in India, all of Diu, with two places called Gogla and Simbor, on the southern extremity of the Kathiawar Peninsula. Allthese three territories constitute what is called the State of India.

GOA.

Goa forms a compact block of territory surrounded by British districts. Savantwadi State lies to the north of it, the Arabian Sea on the west and North Kanara on the south, and the eastern boundary is the range of the Western Ghats, which separates it from the British districts of Belgaum and North Kanara. The extreme length from north to south is 62 miles and the greatest breadth from east to west 40 miles. The territory has a total area of 1,301 square miles and consists of the Velhas Conquistas, or Old Conquests, comprising the island of Goa, acquired by the Portuguese in 1510, and the neighbouring municipalities of Salsette, Bardez, and Mormugao acquired in 1543; and of the Novas Conquistas, of New Conquests, comprising the municipalities of Pernem, Sanquelim, Ponda, the municipalities of Pernem, Sanquelim, Ponda, Quepem, Canacona, Satari and Sanguem acquired in the latter half of the 18th century. The small island of Angediva situated opposite the port of Karwar, in the British district of North Kanara, forms administratively a portion of the Canacona municipality. This was acquired in 1505. The whole country is hilly, especially the eastern portion, the predominating physical feature being the Western Chafs, which physical feature being the Western Ghats, which besides bounding the country along the northeast and south-east, just off westward and spread across the country in a succession of spurs and ridges. There are several conspicuous isolated peaks, of which the highest, Sonsagar, is 3,827 feet high.

The country is intersected by numerous rivers running westward from the Ghats, and the principal eight, which are all navigable, are in size of some importance. Goa possesses a fine har-bour, formed by the promontories of Bardez and Salsette. Half-way between these extremities lies the cabo, or cape, which forms the extremity of the island of Goa. This divides the whole bay into two anchorages, known as Aguada and Mormugao. Both are capable of accommodating the largest shipping from September to May, but Aguada is virtually closed during the south-west monsoon, owing to the high winds and sea and to the formation of sand bars across the estuary of the Mandovi river, which opens into Aguada. Mormugao is accessible at all times and is therefore the harbour of commercial importance. It is the terminus of the railway running to the coast from the inland British system of lines. A breakwater and port have been built there and the trade is considerable being chiefly transit trade from British territory.

The People.

The total population of Goa was 531,952 at the census of 1921. This gives a density of 408 persons to the square mile and the popula-

tion showed an increase of 9 per cent. since the census ten years previously. In the Velhas Conquistas the majority of the population is Christian. In the Novas Conquistas Hindus are more numerous than Christians. The Mos-lems in the territory are numbered in a few thousands. The Christians still very largely adhere to caste distinctions, claiming to be Brahmans, Chardos and low castes, which do not intermarry. The Hindus who form about one-half of the total population are largely Maratha and do not differ from those of the adjacent Konkan districts of Bombay. All classes of the people, with the exception of the control Europeans, use the Konkani dialect of Marathi with some admixture of Portuguese words. The official language is Portuguese, which is commonly spoken in the capital and the principal towns as well as by all educated people. Nearly all the Christians profess the Roman Catholic religion and are spiritually subject to an archbishop who has the titles of Primate of the East and Patriarch of the East Indies and exercises ecclesiastical jurisdiction also over a portion of British India, and the provinces of Macau (China) and Timor (Oceania), with missions in foreign countries and Mocambique (Portuguese East Africa). The Christians of Daman and Diu are subject under a new Treaty signed in 1928 between Portugal and the Holy See to the Archbishop of Goa There are numerous churches in Goa, mostly built by the Jesuits and Franciscans prior to the extinction of the religious orders in Portuguese territory. churches are in charge of secular priests. Hindus and Mahomedans now enjoy perfect freedom in religious matters and have their own places of worship. In the early days of Portuguese rule the worship of Hindu gods in public and the observance of Hindu usages were strictly forbidden and rigorously suppressed.

The Country.

A little over one-third of the entire territory of Goa is stated to be under cultivation. The fertility of the soil varies considerably according to quality, situation and water-supply. The Velhas Conquistas are as a rule better and more intensively cultivated than the Novas Conquistas. In both these divisions a holding of fifteen or sixteen acres would be considered a good sized farm but the majority of holdings are of much smaller extent varying from half an acre to five or ax acres. The staple produce of the country is rice, of which there are two good barvests, but the quantity produced is barely sufficient to meet the queeds of the population for two-thirds of the year. Next to rice, the culture of cocoanut palms is deemed most important, from the variety of uses to which the products are applied. Hilly places and inferior

soils are set apart for the cultivation of cereals and several kinds of fruits and vegetables are cultivated to an important extent. The condition of the agricultural classes in the Velhas Con-quistas has improved during recent years. dustas has improved during recent years, owing to the general rise in the prices of all classes of agricultural produce and partly to the current of emigration to British territory. There is a great shortage of agricultural labour in the Velhas Conquistas. In the summer months bands of artisans and field labourers from the adjoining British territory make their way into Bardez where the demand for labour is always keen. Stately forests are found in the Novas Conquistas. They cover an area of 116 square miles and are under conservation and yield some profit to the administration. Iron is found in parts of the territory; but has not been seriously worked. Manganese also exists and some mines are being worked at present, the ore being exported to the Continent.

Commerce.

In the days of its glory, Goa was the chief entrepot of commerce between East and West and was specially famous for its trade in horses with the Persian Gulf. It lost its commercial importance with the downfall of the Portuguese Empire and its trade is now insignificant.

The present trade of Goa is not very large. Its imports amount to about Rs. 160 lakhs and exports to about Rs. 40 lakhs. The discrepancy is met from the money sent to Goa by the many emigrants who are to be found all over the world. Few manufacturing industries of any moment exist and most manufactured articles in use are imported. Exports chiefly consist of cocoanuts, betel nuts, mangoes and other fruits and raw produce.

A line of railway connects Mormugao with the Madras and Southern Mahratta Railway. Its length from Mormugao to Castle Rock above the Ghats where it joins the British system, is 51 miles, of which 49 are in Portuguese territory. The railway is under the management of the Madras and Southern Mahratta Railway admi-nistration, and the bulk of the trade of Mormugao port is what it brings down from and takes to the interior. The telegraphs in Portuguese territories are worked as a separate system from the British. The latter, however, had an office at Nova-Gos maintained jointly by the two Governments but since 1925 the Nova-Gos office has been handed over to the Portuguese Government which now maintains and works all the telegraphs in its territories.

Taxes and Tariffs.

The country was in a state of chronic financial equilibrium for nearly sixty years with occasional exceptions. The last war enhanced the deficits to alarming proportions and these were met by fresh taxes and new loans. Most of the new taxes were the result of the initiative of the Governor-General Jaime de Morais, who is po-pularly known as the 'Governor of Taxes." only in 1927 the country experienced the joys of a balanced budget and the public servants whose salaries had always remained in arrears are now being paid regularly. There is an esti-mated surplus of about a lakh and a half which has been ear-marked for promoting the indus-

trial progress of the country. If municipal and national taxes be added together, the country presents a very high incidence of taxa-tion, even higher than that of British India, the average coming to about Rs. 8-8 per capita. There is no income-tax, except for government servants, but there is a special ten per cent tax on all incomes derived in the shape of interest on loans. This tax is a powerful contributory cause to the flight of capital from Portuguese India. The chief sources of revenue are the land tax, Excise and the customs. There is a special tax on emigrants which yields to the State about Rs. 60,000 The country being economically backward, the taxes give very little indication of its productive capacity or of its annual wealth. The national wealth is a matter of pure conjecture for lack of statistics.

The tariff schedule is based on the three-fold principle, fiscal, protective and preferential. There is a limited free list on which books and paper figure prominently. The fiscal tariff paper ngure prominently. The usual warm ranges from 10 to 30 per cent. according to the nature of the commodities, but the duties in several cases are specific, not ad vulorem. This several cases are specific, not as valorem. Inis causes considerable hardship to trade, and specially to the poorer classes of consumers. The preferential tariff applies to goods coming from Lisbon and the Portuguese Colonics. Very recently the principle of protection has been extended to the export of canned fruits which are entitled to a bounty of 10 per cent. on that heat price. their basic price.

The Capital.

Nova-Goa, the present capital of Portuguese India, comprehends Panjim and Ribandar, Old Goa is some six miles distant from the new city. Panjim occupies a narrow strip of land leading up to the Cabo, the cape dividing the Aguada bay from that of Mormugao, and mainly slopes down to the edge of the Aguada. It was solected as the residence of the Portuguese Viceroy in 1759, and in 1843 it was raised to its present rank as the capital of Portuguese India. The appearance of the city, with its row of public buildings and elegant private residences, as seen from the water is very picturesque and this impression is not belied by a closer inspection of its neat and spacious roads, bordered by decent, tidy houses. The most imposing public structures are the barracks, an immense quadrangular building the eastern wing of which accommodates the Primary School, the Public Library and the Go-vernment Press Other noticeable buildings are the Cathedral and various churched, the vice-regal palace and the High Court. The square in the lower part of the town is adorned with a life-sized statue of Albuquerque standing under a canopy.

History.

Gos was captured for the Portuguese by Alfonso de Albuquerque in 1510. Albuquerque promptly fortified the place and established Portuguese rule on a firm basis. From this time Goa rapidly rose in importance and became the metropolis of Portuguese power in the East. There was constant fighting with the armies of the Bijapur kingdom, but the Portuguese held their own and gained the surrounding territory now known as the Velhas Conquistas.

The subsequent history of the town is one of ostentation and decay. Goa reached its summit of prosperity at the end of the six-teenth century. The accounts of travellers show that the Goa of those days presented a scene of military, ecclesiastical and commer-cial magnificence which has had no parallel in the British capitals of India. Portugal, however, with its three millions of population, was too small to defend itself against Spain and maintain at the same time its immence Empire in the four Continents. Albuquerque tried to conschdate Portuguese rule in India by his policy of attracting the conquered Indians and granting them civil and religious liberties. His contemporaries, however, could not understand his far-seeing statesmanship and after his death they undid all his work basing their dominion on conquest by the sword and military force and they laboured to consolidate it by a proselvtising organisation which throws all the missionary efforts of every other European power in India into the shade. Old Goa, as the ruins of the old capital are called to-day, had a hundred churches, many of them of magnificent proportions, and the Inquisition which was a power in the land. The sixty years' subjection to Spain in the 17th century completed the ruin of the Portuguese Empire in the East and though the Marquis of Pombal in the 18th century tried to stave off its decadence, his subordinates in far-off India either could not understand or would not carry out his orders and even his strong hand was unable to stop the decline. It was in the 19th century that the colonials began to enjoy full Portuguese citizenship and sent their representatives to the Parliament in Lisbon.

Modern Times.

There was frequently recurring fighting and in 1741 the Marathas invaded the neighbourhood of Goa and threatened the city itself. An army of 12,000 men arrived from Portugal at the critical moment. The invaders were beaten off, and the Novas Conquistas were added to the Portuguese possessions In 1844 shelter given by Goa to fugitives from justice in British territory threatened to bring about a rupture with the British Government at Bombay. In 1852 the Ranes of Satarı, in the Novas Conquistas, revolted. In 1871 the native army in Goa mutinied and the King's own brother came from Lisbon to deal with trouble and having done so disbanded the native army, which has never been reconsti-tuted. But another outbreak among the troops took place in 1895 and the Ranes joining them the trouble was again not quieted until the arrival of another special expedition from Lisbon. The Ranes again broke out in 1901 and again in 1912, troops being again imported to deal with the last outbreak, which was only reported concluded in the summer of 1913. There has been no outbreak after that date.

The people on the whole appear to be quite tisfied with the Portuguese connection. There satisfied with the Portuguese connection. is no agitation for further reforms as in British India and not a sign of disaffection against Portuguese rule. This is chiefly due to the fact that under the present regime the natives of Goa elected by the 60 highest tax payers of Goa; one enjoy complete equality with the natives of Pormember elected by the Associations of Land tugal, many of the sons of Goa occupying high owners and Farmers of the District; and one

and responsible positions in Portugal. Elvino de Britto who was Minister of Public Works towards the end of the last century was a native of Goa as was the father of Dr. Bettencourt Rodrigues, Minister for Foreign Affairs in General Carmonas dictatorial Government. Natives of Goa are also Dr. Almeida Arez, the President of the Supreme Court in Lisbon, Dr. Caeteno Gonsalves, Judge of the same Court and Mr. Alberto Xavier, Secretary-General of the Ministry of Finance.

Administration.

The Lisbon Government by Decree No. 3266, dated 27th July 1917, enacted new rules regarding the administration of Portuguese India under an Organic Charter (Carta Organica) in force since 1st July 1919. This Charter, regarding civil and financial administration regarding civil and mancial administration of the colony, was modified by rules Nos. 1005 and 1022, dated 7th and 20th August 1920, and decrees Nos. 7008 and 7030 dated 9th and 16th October. A new Organic Charter modifying in certain parts the earlier one was granted by Decree No. 12499 of 4th October 2000 and 12499. 1926 and is now in force.

The territory of Portuguese India is ruled by one Governor-General, residing in the Capital of the State, at Panjim alias Nova-Goa, and is divided into three districts: Goa, Daman and Diu. 'The last two are each under a Lieutenant-Governor. The district of Goa is under the direct superintendency of the Governor-General,

Subordinate to the Governor-General the Subordinate to the tovernor-teneral mic following Secretariats are working: Home and Political, Finance, Customs, Education, Military, Naval, Agriculture, Health and Public Works There are also three special and autonoworks There are also three special and automorphous Departments, which do not constitute exclusive Secretariats, one of them being the Department of Posts and Telegraphs, the second that of Survey and the third that of the Flacal of the Y. I. P. Rallway.

As the principal organ of administration next to the Governor-General and in collaboration with him works a Governor's Council (Conselho do Governo) with Legislative and advisory powers. The Council is constituted, in addition to the Governor-General, ex-officeo President, of four officials (Attorney-General, the Director of Finances, the Director of Civil Administration and the Director of Public Works), five elected members (three representing Velhas Conquistas, one the Novas Conquistas and one the Districts of Daman and Diu) and five members nominated by the Governor-General to represent the minorities, agricultural, commercial and other interests and the press.

In each province of Goa, Daman and Diu, there is a District Council to supervise the Municipalities and other local institutions. The District Council of Goa is composed of the Director of Civil Administration, President, the Govcrnment Prosecutor of the Nova-Goa Civil Court; the Deputy Chief Health Officer; the Engineer next to the Director of Public Works; the Deputy Director of Finances; the Chairman of the Municipal Corporation of the Islands; one member elected by the Commercial and Industrial Associations of the district; one member

member advocates elected by the Legislative Courts of Justice at Panjim, Margao, Mapuça, Council among the legally qualified.

There is one High Court in the State of India Courts of Justice at Mormugão (Vasco da Gama), with five Judges and one Attorney-General; and Ponda, Diu and Nagar-Ayeli.

PORT OF MORMUGAO.

Mormugho is situated towards the south of such assistance. Aguada Bar, on the left Bar, on the left bank of Zusry River in Lat. 15° 25'N. and Long. 73° 47' E., about 225 miles south of Bombay is controlled in controlled in the state of Bombay. and 64 miles south of Panjim, the Capital of Portuguese India. The Port of Mormigao is the natural outlet to the sea for the whole area served by the M. & S. M. Ry. (metre-gauge), and offers the shortest route both passenger and goods traffic. The distance from Aden to Mormuguo is about the same as from Aden to Bombay. The Port is provided with light-houses, buoys and all necessary marks and it is easily accessible all the year round and at any hour of the day or night even without the assistance of a Pilot. Pilotage is not compulsory, but when usual pilot fiag is hoisted, a whole area, c qualified officer will board the vessel and render the Harbour

Mormugão Harbour is the terminal station of the West of India Portuguese Railway which is controlled by the Madras and Southern Maharatta Railway Company, with headquarters at Madras.

With a view to promoting the economical, commercial and industrial development of Mormugão, a special Department under the designation of the "Mormugão Improvement Trust" with its head office at Vasco da Gama, 2 miles from Mormugão Harbour, has been created and the Local Government have introduced various regulations granting every facility to those intending to raise buildings for residential and industrial purposes in the whole area, comprising about 300 acres, near

DAMAN.

The settlement of Daman lies at the enteritory is under tillage. The principal crops trance to the Gulf of Cambay, about 100 miles north of Bombay. It is composed of two portions, namely, Daman proper, lying on the minerals. There are stately forests in Nagar coast, and the detached pargana of Nagar Aveli, and about two-thirds of them consist of avel, and about two-thirds of them consist of separated from it by a narrow strip of British territory and bisected by the B. B. & C. I. Railway. Daman proper contains an area of 22 square miles and 26 villages and has a population (1921) of 17,566 of whom 1,480 are Christians. The number of houses is according to the same consus 4,095. Nagar Avell has an area of 60 square miles and a population (1921) of 31,048, of whom only 271 arc Christians. The number of houses is 6,069. The town of Daman was sacked by the Portuguese in 1531 rebuilt by the natives and retaken by the Portuguese in 1558 when they made it one of their permanent establishments in India. They converted the mosque into a church and have since built eight other places of worship. The native Christians adopt the European costume, some of the women dressing themselves after the present European fashion, and others

Avel, and about two-thirds of them consist of teak, but the forests are not conserved and the extent of land covered by each kind of timber has not been determined. Before the decline of Portuguese power in the East, Daman carried on an extensive commerce especially with the east coast of Africa. In those days it was noted for its dycing and weaving.

The territory forms for administrative purposes a single district and has a Municipal Chamber and Corporation. It is ruled by a Governor invested with both civil and military unvernor invested with both civil and military functions, subordinate to the Governor-General of Goa. The judicial department is administered by a judge, with an establishment composed of a delegate of the Attorney-General and two clerks. In Nagar Aveli the greater part of the soil is the property of the Government, from whom the cultivators hold their tenures direct. A tax is lavied on all following the old style of petticoat and mantle once prevalent in Spain and Portugal

The soil of the settlement is moist and ferture tile, especially in Nagar Avell, but despite the are and-tax, forests, excise and customs

ease of cultivation only one-twentieth part of the duties.

Diu is an island lying off the southern extremity of the Kathiawar Peninsula, from which it is separated by a narrow channel through a considerable swamp. It is composed of three portions, namely, Diu proper (island), the village of Gogla, on the Peninsula, separated by the channel, and the fortress of Simbor, about 5 miles west of the island. It has a small but excellent harbour, where vessels can safely ride at anchor in two fathoms of water and owing to the great advantages which its posisian Gulf, the Portuguese were fired at an of 1921, early period with a desire to obtain possession Christians.

of it. This they gained, first by treaty with the Sultan of Gujarat and then by force of arms. Diu became opulent and famous for its commerce. It has now dwindled into insignificance. The extreme length of the island is about seven miles and its breadth from north to south, two miles. The area is 20 square miles. The population of the town of Diu, from which the island takes its name, is said to have been 50,000 in the days of its commercial prosperity. The total population of the island, according to the census of 1921, is 13,844, of whom 228 were

FRENCH POSSESSIONS.

The French possessions in India comprise five Settlements, with certain dependent lodges, or plots. They aggregate 203 square miles, and had a total population on the 26th Feb. 1931 of 286,410. The first French expedition into Indian waters, with a view to open up commercial relations, was attempted in 1803. It was undertaken by private merchants at Rouen, but it failed, as also did several similar attempts which followed. In 1642 Cardinal Richelleu founded the first Campagnic d'Orient, but its efforts met with no success. Colbert reconstituted the Company on a larger basis in 1664, granting exemption from taxes and a monopoly of the Indian trade for fifty years. After having twice attempted, without success, to establish itself in Madagascar, Colbert's Company again took up the idea of direct trade with India and its President, Caron, founded in 1668 the Comptoir, or agency, at Surat But on finding that city unsuited for a head establishment he seized the harbour of Trincomalee in Ceylon from the Dutch. The Dutch, however, speedily retook Trincomalee; and Caron, passing over to the Coromandel coast, in 1672, seized 8t. Thome, a Portuguese town adjoining Madras, which had for twelve years been in the possession of Holland. He was, however, compelled to restore it to the Dutch in 1674.

The ruin of the Company seemed impending when one of its agents, the celebrated Francois Martin, suddenly restored it. Rallying under him a handful of sixty Frenchmen, saved out of the weck of the settlements at Trincomalee and St. Thome, he took up his abode at Pondicherry, then a small village, which he purchased in 1683 from the Raja of Gingee. He built fortifications, and a trade began to spring up; but he was unable to hold the town against the Dutch, who wrested it from him in 1693, and held it until twas restored to the French by the Peace of Ryswick, in 1697. Pondicherry became in this vear and has ever since remained, the most important of the French Settlements in India. Its foundation was contemporaneous with that of Calcutta. Like Calcutta, its site was purchased by a European Company from a native prince, and what Job Charnock was to Calcutta Francois Martin proved to Pondicherry. On its restitution to the French by the Peace of Ryswick in 1697, Martin was appointed Governor, and under his able management Pondicherry became an enterpot of trade.

Chandernagore, in Lower Bengal, had been acquired by the French Company in 1688, by grant from the Delhi Emperor; Mahé, on the Malabar Coast, was obtained in 1725-6, under the government of M. Lenoir; Karikal, on the Coromandel Coast, under that of M. Dumas, in 1739. Yanaon, on the coast of the Northern Circars, was taken possession of in 1750, and formally ceded to the French two years later.

Administration.

The military command and administration-inchief of the French possessions in India are vested in a Governor, whose residence is at Pondicherry. The office is of present held by

Monsieur Solomnae (Léoz). He is assisted by a Chief Justice and by several "Chefs de Service" in the different administrative departments. In 1879 local councils and a council-general were established, the members being chosen by a sort of universal suffrage within the French territories. Seventeen Municipalities, or Communal Boards, were erected in 1907, namely, Pondicherry, Ariancoupam, Modeliarpeth, Oulgaret, Villenour, Tiroubouvane, Bahour and Nettapacam, for the establishment of Pondicherry; Karikal, Neravy, Nedouncadou, Tru-nalar, Grande Aldee, Cotchery, for the establish-ment of Karikal, and also Chandernagore, Mahé and Yanaon. On municipal boards natives are entitled to a proportion of the seats. Civil and criminal courts, courts of first instance and a court of appeal compose the judicial machinery. The army and establishments connected with the Governor and his staff at Pondicherry, and those of administrators at Chandernagore, Yanaon, Mahe and Karikal, together with other head quarters charges necessarily engross a large proportion of the revenue All the state and dignity of an independent Government, with four dependent ones, have to be maintained. This is effected by rigid economy, and the prestige of the French Government is worthily maintained in the East. Pondicherry is also entitled to a proportion of the seats. Civil maintained in the East. Pondicherry is also the scene of considerable r ligious pomp and missionary activity. It forms the seat of an Archbishop, with a body of priests for all French India; and of the Missions Etrangeres, the successors of the Mission du Carnatic founded by the Jesnits in 1776. But the chief field of this mission lies outside the French Settlements, a large proportion of its Christians are British subjects and many of the churches are in British subjects and many to one citations at an interactive territory. The British rupes is the ordinary tender within French territories. A line of railway running via Villenour, from Pondicherry to Villupuram on the South Indian Railway, mainof British India, and Karika is linked to the same railway by the branch from Peralam. A Chamber of Commerce consisting of fifteen members, nine of them Europeans or persons of European descent, was reorganised by a decree of 7th March, 1914. The capital, Pondicherry, is a very handsome town, and presents, especially from the sea a striking appearance of French civilisation.

People and Trade.

The Settlements are represented in Parliament at Paris by one senator and one deputy. The Senator is Mons. Lemoignic The Deputy is Mons. Pierre Dupuy. There were in 1932 59 primary schools and 3 colleges all maintained by the Government, with 30s teachers and 9,263 pupils. Local revenue and expenditure (Budget of 1934) Rs. 3,244,873. The principal crops are paddy, groundnut, and ragi. There are at Pondicherry 3 cotton mills, and at Chandernagore 1 jute mill. The cotton mills have, in all 1,691 looms and 71,744 spindles, employing 7,450 persons. There are also at work one oil factory and a few oil presses for groundnuts, and one ice factory. The chief exports from Pondicherry are oil seeds.

At the ports of Pondicherry and Karikal. (visited by Freuch steamers, sailing monthly In 1934 the imports amounted to frs. 104,282,000 between Colombo and Calcutta in connection and the exports to frs. 119,331,000. At these with the Messageries Maritimes The figures two ports in 1934 11,200 vessels entered and contained in this paragph are the latest avail-cleared; tonnage 144,130 T. Pondicherry is able and are corrected up to December 1934.

PONDICHERRY.

Pondicherry is the chief of the French Settlements in India and its capital is the head-quarters of their Governor. It is situated on the Coromandel Coast, 105 miles from Madras by road and 122 by the Villupuram-Pondi-cherry branch of the South Indian Railway. The area of the Settlement is 115 square miles and its population in the 26th Feb 1931 was 183,555. It consists of the eight communes of Pondicherry. The Settlement was founded in 1674 under Francois Martin. In 1693, it was captured by the Dutch but was restored in 1699. It was besieged four times by the English. The first siege under Admiral Boscawen in 1748 was unsuccessful. The second, under Eyre Coote in 1761, resulted in the centure of the place which was resulted in the capture of the place, which was restored in 1765. It was again besieged and captured in 1778 by Sir Hector Munro, and the fortifications were demolished in 1779. The place was again restored in 1785 under the Treaty of Versailles of 1783. It was captured a fourth time by Colonel Braithwaite in 1793, and finally restored in 1816.

The Settlement comprises a number isolated pieces of territory which are cut off from the main part and surrounded by the British District of South Arcot, except where Dupleix, to whom the they border on the sea. The Collector of name owed so much.

South Arcot is empowered to deal with ordinary correspondence with the French authorities on these and kindred matters, and an this capacity is styled the Special Agent.
At Pondicherry itself is a British Consular
Agent accredited to the French Government. who is usually an officer of the Indian Army The town is compact, neat and clean, and is divided by a canal into two parts, the Ville blanche and the Ville noire. The Ville blanche and the Ville noire. The Ville blanche has a European appearance, the streets being laid at right angles to one another with trees along their margins reminding the visi-tor of continental boulevards, and the houses being constructed with courtyards and embellished with green venetians. All the cross streets lead down to the shore, where a wide promenade facing the sea is again different from anything of its kind in British India. In the middle is a screw-pile pier, which serves, when ships touch at the port, as a point for the landing of cargo, and on holidays as a general promenade for the population. There general promenade for the population. There is no real harbour at Pondicherry; ships he at a distance of about a mile from the shore, and communication with them is conducted by the usual masula boats of this coast. Facing the shore end of the pier is a statue of the great Dupleix, to whom the place and the French

CHANDERNAGORE.

Chandernagore is situated on the bank of the Hooghly, a short distance below Chinsura Population (in the 26th Feb. 1931) 27,262 Population (in the 26th Feb. 1931) 27,262
The town was permanently occupied by the French in 1688, though proviously it had been temporarily occupied by them at a date given as 1672 or 1676. It did not, however, rise to any importance till the time of Dupleix. It changed hands between British and French various times during the Napoleonic wars and was finally restored to the French in 1816. finally restored to the French in 1816.

The former grandeur of Chandernagore has

disappeared, and at present it is little more than a quiet suburban town with little external trade. The railway station on the East Indian Railway is just outside French territory 22 Railway is just outside French territory 22 miles from Calcutta (Howrah). The chief administrative officer is the Administrator who is subordinate to the Governor of the French Possessions. The chief public institution is the College Duplery, formerly called St. Mary's institution, founded in 1882 and under the direct control of the French Government.

KARIKAL.

Karikal lies on the Coromandel Coast between the Tanjore District of Madras and the Bay of Bengal. The settlement is divided into six communes, containing 110 villages in all, and covering an area of 53 square miles. It is governed by an Administrator subordinate to the Governor at Pondicherry. The population has in recent years rapidly decreased 1883 It was 93,055, in 1891,75,526; in 1901, 54,003; in 1923, 57,023 in 1924, 56,922; and in 1931, 57,914; but the density and in 1931, 57,914; but the density is still very high, being 1,068 persons is still very high, being 1,000 persons per square mile. Kumbakonam is the only taluk in Tanjore District which has a higher density. Rach of the six communes—namely. Karikal, La Grand Aldee, Nedungadu, Cot-Kéry, Néravy and Tirnoular—possesses a mayor chud council. The members are all elected by

universal suffrage but in the municipality Karıkal half the number of seats are reserved for Europeans or their descendants. The country is very tertile, being irrigated by seven branches of

the Cauvery, besides many smaller channels.

The capital of the settlement is situated on the north bank of the river Arasalar, about it miles from its mouth. It has a brisk trade in rice with Ceylon, and to a less extent with the Straits Settlements It has no commerce with France, and very little with other French colonies. The port is merely an open road-stead, provided with a light-house 142 feet high, the light in which has a range of from 8 to 10 miles. In 1899 Karikal was connected with Peralem on the Tanjore District Roard Railway Karikal finally came into French possession on the settlement after 1815.

The Frontiers.

the wide sense of the term, it will be seen that the Indian Frontier problem, which has loomed so large in the discussion of Indian questions, has always borne a two-fold character—the local issue and the international issue. For almost a century the international issue was the greater of the two, and the most serious question which the Indian Government, both directly and as the executors of British Imperial policy, had to face. But the tendency of later times was for the international aspect to recede and for the local aspect to grow in importance, until it wright be said, with as much truth as charac-terises all generalisations, that the local issue dominated, if it did not absorb the situation.

The Local Problem.-The local problem, in its broadest outlines, may be briefly indicated before proceeding to discuss it in detail. From the Arabian Sea on the West to the confines of Nepal is a wild and troublous sca of some of the highest mountains in the world. The thin valleys in these immense ranges are poorly populated by hardy, brave, inilitant mountainers, rendered the flercer and the more difficult by professing the martial Moslem faith, accentuated by the most bitter fanaticism. But sparse as the population is, it is in excess of the supporting power of the country. Like mountainers in all parts of the world, these brave and fearless men have sought to eke out their exiguous agriculture by raiding the rich plains of Hindustan. We may find a fairly close parallel to the situation in the position of the Highlands of Scotland until after the rebellion of 1745 the English Government of the day sought a permanent remedy by opening for the warlike Highlanders a military career in the famous Highland regiments, and in rendering military operations easier by the construction of Wade's road. The Highland problem has disappeared so long from English politics that its pregnant lessons are little realised, but if the cuitous student will be the control of the cuitous students. read again that billiant novel by Nell Munro, "The New Road," he will appreciate what Wade's work meant for the Highlands of Scotland, and what lessons it teaches those who are called upon to face, in its local aspect, the Indian trontier problem. So tar as the area with which we are dealing was concerned, two policies were tried. In Baluchistan, the genius of Sir Robert Sandeman devised the method of entering into military occupation of the principal points, and thence controlling the country At the same time close engagements were entered into with the principal chiefs, through whom the tribesmen were kept in order. That policy was so successful that whilst the administration was expensive the Baluchistan frontier did not seriously embarrass the Government of India from the time when Sandeman set his mark on the land. Not that the country was entirely peaceful. Occasional tribal raids or risings

By those who take a long view of politics in | in 1919. But speaking broadly, Sandeman e wide sense of the term, it will be seen that brought peace to Baluchistan, and to the large frontier area which is embraced in that generic term. So far as this section of the frontier is concerned it may be said that no frontier problem exists, save the need for an economical and constructive policy.

Towards Afghanistan.—Far otherwise has it until lately been with the section of the frontier which stretches from Baluchistan to the confines of Kashmir. That has, for three quarters of a century, been the scene of almost ceaseless military operations, which have constituted a devastating drain on the Indian exchequer. For years one sought for a definite policy guiding the actions of the Government of India. Ouc explanation of their inconsistencies was found in the existence of two schools of thought. Once the frontier with Afghanistan had been delimited, the soldiers naturally pressed for the armed occupation of the whole country right up to the con-fines of Afghanistan, or at any rate, for military posts, inked with good communications, which would dominate the country. But those who looked at policy not only iron the military standpoint, were fearful of two considerations. They felt that occupation up to the Afghan frontier would only shift the frontier problem farther North. Instead of the differing tribes, we should, they argued, have to meet the Afghan on our border line. If Atghanistan were a strong, homogeneous State, that would be a matter of little account. But even under the iron rule of Abdurrahaman Khan, the Amir's writ ran but lightly in the southern confines of his kingdom. Under his successor, Habibullah Khan, whose policy was generally wise and successful, it ran still less firmly. The Amir was unable to control the organisation of the tribal gatherings which involved us in the Zakka Khel and Mohmand expeditions during the Indian secretaryship of that arch pacilist, Lord Morley. Nor did it enable Habibullah to deal effectively with a rising against his own Governor in Khost. The Afghan forces melted away under transport difficulties when they were moved against the rebellious Khostwalis, and the Amir had to make peace with his troublous vassals. Theremake peace with his troublous vassals. Therefore, it was said, occupation up to what is called the Durand Line because it is the line demarcated by the Frontier Commission in which Sir Mortimer Durand was the British Plenipotentiary, would simply mean that in time of trouble we should have to deal with Afghanistan instead of a tribe or two, and with the irreconcilable tribesmen along our difficult line of communications. was the further consideration that financiers were of the fixed belief that even if the Forward Policy was wise from the military standpoint it would involve charges over an in-definite period greater than the Indian finances would bear. Moreover on this section of the Frontier, the position was complicated by the expansion of Russia in Central Asia. The easiest necessitated occasional military operations, and the Gomal Pass was involved in the expansion of Russia in Central Asia. The easiest general tribal disturbances which followed the wanton declaration of war by Afghanistan

have swept from Persia and Central Asia to loot the fat plains of Hindustan, traverse this region. Therefore it was deemed essential to control, if not to occupy them, in the interests of the Imperial situation. In this zone therefore policy ebbed and flowed between the Forward School, which would have occupied, or dominated, the whole Frontier up to the Durand Line, that is to say up to the Afghan frontier: and the Close Border School, which would have us remain out of the difficult mountainous zone and meet the tribesmen on the plains if they sallied forth. The extreme advocates of this school would even have had us return to the line of the Indus.

The Two Policies.—The result of this conflict of opinion was a series of wavering compromises, which like all compromises was profoundly unsatisfactory. We pushed forward posts here and there, which irritated the Tribesmen, and made them fearful of their prized independence, without controlling them. These advanced posts were in many cases inadequately held and rarely were they linked with their supporting posts by adequate means of communication. We preserved between our administrative frontier and the Durand Line which demarcated our frontier with Afghanistan an irregular belt of land called The Independent Territory, in which neither we nor the Afghan Government exercised jurisdiction. This was left entirely under the control of the tribes who peopled it. Now it was often asked why we did not follow the precedent of Baluchistan and "Sandemanise" the Independent Territory. That was one of the perennial topics of Frontier discussions. But stress was laid upon the essential differences between this zone and Baluchistan. Sir Robert Sandeman found a strong tribal system existing in Baluchistan, and he was able to enter into direct engagements with the tribal Chiefs. There is no such tribal organisation in the Independent Territory. The tribal Chiefs, or maliks, exercise a very precarious cuthority, and the instrument for the collective expression of the tribal will is not the chief, but the jirgah, or tribal council, of the most democratic character, where the voice of the young men of the tribe often has the same influence, in time of excitement perhaps more influence, as the voice of the wiser grey bread. The bitter fruit of this policy of compromise was reaped in 1897, when following a minor outbreak in the Tochi Valley the general uneasiness flamed into a rising which involved the whole of the North-West Frontier, from the Gomal to the borders of Nepal. A force over thirty thousand strong had to be mobilised to deal with it. Even this large force, owing to the immense difficulties of transportation was unable effectively to deal with the situation, though peace was made. The emergency thus created synchronised with the advent of Lord Curzon as Viceroy. He dealt with it in master-ful fashion. In the first place, he separated the frontier zone from the Government of the Punjab, which had hitherto been responsible for its administration, and had organised for the purpose a special force of Frontier soldiers, known as the Punjab Irregular Frontier Force This was the revival of a scheme as old as the Viceroyalty of Lord Lytton, though no other Viceroy had been able to carry it through in the face of the strong opposition of successive Punjab

constituted into a separate administrative zone under the direct authority of the Government of India, exercised through a Chief Commissioner. Then Lord Curzon withdrew the advanced military posts and concentrated the Regular troops in bases better linked with the main military centres of India by roads and railways. The advanced posts, and especially important Passes like the Tochi, the Kurram and the Khyber, were entrusted to the defence of local militia, recruited from the tribesmen themselves, and officered by British officers drawn from the ranks of the Indian Army. Later it was supplemented by a fine development policy. The construction of the Upper Swat Canal, afterwards developed into the Swat Canal (q.v. Irrigation) led to such an increase in cultivation that the tribesmen were given a means of livelihood and were invested with the magic charm of valuable property. The irrigated part of the Frontier has since been one of the most peaceful in the whole border line.

Lord Curzon's Success .- Judged by every reasonable standard the Curzon policy was There were occasional punitive expeditions demanded, such as for instance the Zakka Khel and Mohmand expeditions, and the Waziris, and in particular the truculent Mahsud Waziris, never ceased raiding. But in comparison with what had gone before, it gave relative peace. It endured throughout the Great War, though the Waziris built up a heavy bill of offences, which awaited settlement when Government were free from the immense preoccupations of the war. It broke down under the strain of the wanton invasion of India by the Afghans in the hot weather of 1919. On February 20th the Amir Habibullah Khan was assassinated in his sleep near Jelalabad. Although he does not figure so prominently in frontier history as his iron tather Abdurrahaman Khan, he nevertheless has high claims on the favourable verdict of history. None anticipated that any successor to Abduirahaman Khan could hold in the leash of a single State the fractious, fanatical tribes who make up the population of the Afghan kingdom. this Habibullah did. On occasions his attitude seemed to be equivocal, as when armed gatherings of the tribes called lashkars were permitted to assemble in Afghan territory and to invade the Independent Territory, causing the Zakka Khel and Mohmand expeditions. But we must not judge a State like Afghanistan by European standards; the Amir had often to bow before the fanatical elements amongst his own people until they had burnt their fingers by contact with the British troops. At the outset of the Great War he warned the Government that he might often have to do things which seemed unfriendly, but they must trust him. In truth, the position of the Amir when Turkey entered on the war, and called Moslems everywhere to arms on the side of Germany was extraordinarily difficult; he received Turkish, German and Austrian missions in Kabul, from which British representatives were still excluded. But he kept Afghanistan out of the war, and with the complete defeat of the Central Powers and their satellites, his policy was justified up to the hilt. Indeed, his success was the cause of his assassination. The irreconcilable elements in the Kingdom saw Governments. The area so separated was that the day of reckoning had come and strove to avert the settlement of their account by the in British foreign policy less attractive to the murder. When he was done to death, his student of Imperial affairs. Russia was conbrother, Nasrullah Khan, was proclaimed Amir by fronted in Central Asia with precisely the same the assassins. But the conscience of Afghanistan revolted against the idea of Nasrullah, the archfanatic of the ruling House of Kabul, ascending the throne over the blood-stained corpse of his brother. A military movement in Kabul itself brushed him aside and installed the son of Habibullah, Amanullah Khan, on the throne. But Amanullah Khan soon found it was a thorny bed on which he lay, and encouraged by the disorders in India which followed the passing of stringent measures to deal with anarchical crime, set his troops in motion on April 25, 1919, and preaching a jehad promised his soldiery the traditional loot of Hindustan. The Indian Army was at once set in motion, and as has always been the case the regular Afghan Army was easily beaten. Dacca was seized, Jelalabad and Kabul were frequently bombed from the air, and there was nothing to prevent our occupation of Kabul, save the knowledge gleaned from the bitter heritage of the wars of 1838 and 1878, that it is one thing to overset a government in Afghanistan, but it is quite another to set up a stable government in its stead. The Government of India wisely held their hand, and the Afghans having sued for peace, a treaty was signed on the 8th August 1919.

But an untoward effect of this wanton war was to set the Frontier from the Gomal to the Khyber ablaze. With one or two exceptions, the Iribal Militia left without the support of the regular troops who in the emergency ought to have been hastened to their succour, could not stand the strain of an appeal from their fellow tribesmen, and either melted away or joined the rising. This has often been described as the tailure of the Curzon policy, which was based on the tribal militia But there is another aspect to this issue, which was set out in a series of brilliant articles which Mr. Arthur Moore, its special correspondent, contributed to The Times. He pointed out that the militia was meant to be a military police force. The lapse of time, and forgetfulness of its real purpose, had converted the militia into an imitation of the regular army. The Militia was meant to be a police. When the war broke out its units were treated as a covering force behind which the Regular Army mobilised This is a role which it was never intended they should serve; exposed to a strain which they should never have been called upon to bear, they crumpled under it. If on the outbreak of trouble troops had promptly hurried to their support all might have been well. Left to look after themselves, with no sign of support, they found themselves too weak to hold their Left to positions and militarily their only course was to retire from the midst of their own kinsmen as the seal of revolt surged towards them They would not take it.

Russia and the Frontier.—The Curzon policy was up to the time of its collapse greatly

conditions as those which taced England in India when the course of events converted the old East India Company from a trading corporation into a governing body. The decaying khanates of Central Asia were impossible neighbours. Confronted with an inferior civilisation. and with neighbours who would not let her alone, Russia had to advance. True, the adventurous spirits in her armies and some of the great administrators in the Tsarist capital were not adverse to paying off on the Indian Borderland the score against Great Britan for the Crimean War and for what the Russians the Crimean war and for what the Lussians thought was depriving them of the fruits of their coatly victory over Turkey in 1877-78. The result was a long and unsatisfactory guerrilla enterprise between the hardiest spirits on both sides, accompanied by periodic panics in the British Press each time the Russians moved forward, which induced the colning, after the Russian occupation of Merv, of the generic term "Mervousness." This external force involved the Government of India in the humiliations of the Afghan War of 1838, with the tragic destruction of the retiring Indian force between Kabul and Jelalabad, slightly relieved by the heroic defence of Jelalabad and the firmness of General Pollock in refusing to withdraw the punitive army until he had set his mark on Kabul by the razing of the famous Bala Hissar fortress It involved us in the second Afghan War of 1878, which left the baffling problem of no stable government in Afghanistan. There was a gleam of light when Abdurrahaman Khan, whom we set up at Kabul to relieve us of our perplexities, proved himself a strong and capable ruler, it one ruthless in his methods. But in the early eighties the two States were on the verge of war over a squabble for the possession of Penjdeh, and then men began to think a little more clearly. There began a series of boundary delimitations and agreements which clarified the situation, without however finally settling it. The old controversy broke out in another form when intrigues with a Buriat monk, Dorlieff, during Lord Curzon's viceroyalty, gave rise to the grave suspicion that the scene had only shifted to Tibet. An expedition to Lhasa rent the veil which had so long concealed the mysterious city and dispersed the masma of this intrigue. But it was not until the conclusion of the Anglo-Russian agreement of 1907 that the two countries arrived at a stage long sought by those who looked beyond their noses. The actual authors of the Agreement were Lord Grey, the Foreign Secre-tary, and Lord Hardinge, formerly British Ambassador in Petrograd, but it had been desired by their predecessors, whose efforts were rendered nugatory by the intransigent attitude of the dominant forces in Petrograd. It was not until Russia was chastened on the battlefields of Manchuria by Japan, and disappeared as a sea power in the decisive battle of Tsushima, poncy was up to the time of its conlapse greatry see power in the decisive battle of Tsushima, assisted by extraneous events. The greatest that an atmosphere was created favourable external force in moulding Indian frontier policy to the conclusion of an Agreement. This was the long struggle with Russia. For nearly embraced the whole frontier zone. There were three-quarters of a century a veiled warfare many unsatisfactory features in the Agreement, for predominance in Asia was waged between especially in regard to Persia, for which we Great Britain and Russia. There are few pages had to pay a considerable price in the attitude

of Persians in the War. But again taking long views, the Agreement fully justified itself in a broad definition of the interest of the two countries, which put an end to the period of excursions and alarms up to the outbreak of the War. Russia then ceased to be a material factor in the Indian Frontier Problem. With the establishment of the Soviet Oligarchy in Moscow uneasiness has returned, for the geographical and allied chreumstances which influenced the policy of the Tsarist regime exert precisely the same pressure upon its successor, and the Soviet have a troublesome motive which the Tsars had not: their aim to produce world revolution is avowed and Britain and the Constitutionalism for which she stands are the greatest obstacles in their path.

German Influence.—As nature abhors a vacuum, so in the case of States bordered by abhors higher civilisations, no sooner does one strong influence recede than some other takes its place. Long before the signing of the Anglo-Russian Agreement the shadow of the German menace had begun to appear on the horizon. Imitative, not creative, in this, as in most other activities, the Germans adapted their methods from the penetration by railway which was so marked a feature of Russian expansion in Manchuria, brought to an end by the disastrous issue of the war with Japan. The seeds of the German effort were sown when the Kalser, extending the hand of Christian fellowship to the Sultan of Turkey, Abdul-Hamed, at a time when that sovereign was ostracised by Europe for his direct complicity in the massacre of Armenians, or rather one of the massacres of Armenians, made German influence supreme at Constantinople. His theatrical tour through Palestine, which was generally treated in Europe as an exhibition of opera bouffe, soon bore fruit in the acquisition by German interests of the principal railways in Anatolia. Later it fructified more effectively in the Baghdad Railway concession, under which German interests secured the right of extending the Anatolian lines from the port of Haidar Pasha, opposite Constantinople, to a port in the Persian Gulf Now successive British Statesmen of both parties had declared that the acquisition of a territorial foot-hold in the Persian Gulf by any power-Russia and the port of Bunder Abbas being then in view—would be regarded as an unfriendly act. There followed a replica of the period of alarms and excursions which had disfigured our relations with Russia. Undaunted, even when their endeavour to secure British co-operation in the enterprise failed, and when the Revolution in Turkey which set the Committee of Union and Progress in power entailed a temporary interruption of their influence at Constantinople, the Germans pressed forward with their enterprise. They pushed the Anatolian railways as far east as Bourgulu, and constructed a line northwards from Baghdad to Samara. They sent a mission to explore the potentialities of the port of Koweit in the Persian Gulf, and set the Turks in motion to subordinate the Sheikh of Koweit to direct Turkish sovereignty, with a nominal view to extending the Baghdad railway

ranges by a series of tunnels, and laid the rails on the other side of the mountains across the Euphrates to Ras-al-Ain. Behind this railway activity stood a grandiose policy, which is indicated in what became known in Germany as "B.B.B."—Berlin, Byzantium, Baghdad. Throughout the progress of these schemes, which did not stop short of Baghdad, but were directed through a port in the Persian Gulf, at India, the Germans were anxious to secure the co-operation of Great Britain, if they could do so on their own terms, that is to say without affecting the enterprise as a dominant German adventure. Shortly before the commencement of the war the protracted negotiations with London which had this end in view ended in a definite agreement between the two Powers. Under this agreement the Gulf section of the line was to have been British, and the other portion German. But this agreement which had not been signed became waste paper with the outbreak of the war, and the German plans vanished in thin air with the complete defeat of Turkey and Germany. Nevertheless the railway did not stand still during the war. Germany made immense efforts to complete the difficult tunnel sections and the work was substantially finished when the Armistice was signed.

The Significance of the Baghdad Railway -The real significance of the Baghdad Railway was little appreciated in Great Britain. It was constantly pictured as a great trunk line, which would short-circuit the traditional British dominance by sea, and absorb the passenger and goods traffic from the East. This idea could only be nourished by those completely ignorant of the conditions of the Indian passenger service and the essentials of a competitive route for the carriage of inerchandise. The rush of passenger traffic from India is from April to June, in order to escape the hot weather in India and the return traffic is spread over the period of from October to January, From April to June the heat in Mesopotamia is appalling. To imagine that the passenger traffic from India would turn from the easy and comfortable, as well as fairly expeditious sea route from Bombay to Marseilles and thence by the easiest railway travelling outside the British Isles to Calais and London, for such a land route was an amazing chimera. The Baghdad route would have involved a sea voyage from Bombay or Karachi to Kowettor Basra, then a Journey across the burning plains of Mesopotamia and Asia Minor to Haidar Pasha, then across the Straits to Constantinople, and finally right across Europe to a North Sea port. This would in any circumstances have been a costly freak journey in stances have been a costly ireas joining incomparison with the sea route. Then as for the commercial aspect of the line, the natural cost of the Middle East is Basra. The sea port of the Middle East is Basra. The sea freight from England or Germany to Basra was often less than half the freight from Basra to Baghdad. To imagine again that merchandise would desert this route for a land and sea route, which would have involved a double break of bulk at Constantinople and Haidar Pasha, was again a chimera.

a nominal view to extending the Baghdad railway from Basra to Koweit, or the vicinity of Koweit at the deep water inlet behind Bubian Island. designed to make the Power seated at Constantiney commenced the most difficult part of the work in piercing the Amanus and Taurus

Minor and The Middle East, and the route-selectical dated a binding arrangement with the Sheikh of ed, often criticised, was the best for the rapid Koweit, and the position of the Turks at Al-Katr movement of troops to the strategic centres. was always very precarious. On the outbreak of the Railway of completed, the war however the situation projountly movement of troops to the strategic centres. Was always very precarious. On the outbreak of As a commercial line, the Railway, if completed, the war however the situation protoundly would have served three zones. The western area of Turkey in Asia at Haidar Pasha. The characteristic to eastern zone at Pasra. The Germans, it is capture Baghdad by coup de main, with very understood, attached immense importance to inadequate forces, and still more inadequate. the subsequent engagements with Turkey which placed them in maritime command at Alexandretta. They began to inaugurate a commercial position in the Persian Gulf through the establishment of a subsidized line of steamers run by the great Hamburg-America corporation. They strove to obtain an actual footing in the Gulf through the German house of Wonkhaus. The Germans were probably never serious in their alleged designs on Koweit, which could never have borne a more definite relation to the commerce of the Gulf than Flushing to Antwerp or Cuxhaven to Hamburg, that was one of the red herrings they drew across their trail to divert attention from their real objective, Basra, which is destined by virtue of an unchallengeable geographical and natural position to be the great port of The Middle East. These considerations have no more than an academic value now. Germany was alfaced. than an academic value now. Germany was defeated. The Turks, when they emerged from an isolated military despotism based on Angora, were confronted with the immense problem of re-building their bankrupt State, deprived of the most intelligent section of the old population—the Greeks and the Armenians, by massacre and expulsion—were a very different factor. The completion of the through line was indefinitely postponed. But as the advantages of the route, for the purposes we have indicated, are many and great, the ultimate construction of the through line is only a matter of time, so one has placed these authoritative characteristics on record for the guidance of opinion when the project of the through route is revived, as it must be.

Turkey and the Frontier.—The position of Turkey on the Indian frontier was never of any considerable importance in itself, and never assumed any significance, save as the arant courier of Germany, when she passed under the tutelage of that Power, and for a limited period during the war. Although so long established in Mesopotamia, Turkey was not very firmly seated in that country, the Arabs tolerated rather than accepted Turkish rule so long as they were substantially left alone, and the administration, it is understood, never paid its way. For a brief period Midhat Pasha raised the status of Mesopotamia, and after the Revolution that fine soldier Nazim Pasha became a power in the land. But speaking breathe a power in the land. But speaking broadly Turkey remained in Mesopotamia because it was no-one's interest, even that of the Arab, to turn her out. When however Germany developed her "B B B" policy, Turkey was used as a stalking horse. She moved a small force to the Pennsuia of Al-Katr in order to frighten the Sheikh of Bahrein, and tried to convert the nominal suzerainty exercised, or rather claimed, over the Shelkh of Koweit into a de facto suzerainty, exercised by military force. These efforts faded before the vigorous action or the British Government which con-

cluded a binding arrangement with the Sheikh of was developed into the insane enterprise to capture Baghdad by coup de main, with very inadequate forces, and still more inadequate transport, we found ourselves involved in military operations of the most extensive and unprofitable character. These were completely successful with General Maude's occupation of Baghdad. with General Maude's occupation of Baghdad. After the Russian debicels we found ourselves involved in a new front, which stretched from the Euphrates to the wildest part of Central Asia, producing military exploits of an almost epic character, but exercising little influence on the war. They were brought to an end by pressure not on extensive wings, but at the heart of Turkish Power in Palestine, where Lord Allenby centrared the Turks like chaff. But Allenby scattered the Turks like chaff. the aftermath of the war left us in an indefinite position in Mesopotamia, with indefinite fron-tiers. This enabled the Turks, if they were so disposed, to be troublesome through guerrilla warrare in the Mosul Zone, and by stirring up the Kurds, who are the Ishmaelltes of Asia Minor. The conclusion of the Treaty of Lausanne in 1923 brought temporary relief, but it did not settle the main issue, the frontier between Turkey and Irak. Under the Treaty it was provided that if the two parties could not agree to a boundary line delimitation should be left to The League of Nations. Negotiations were promptly opened at Constantinopie, but it was immediately found that there could be no mutual agreement; the Turks demanded the whole of the Mosul vilayet, and the British delegates declared that Mosui and its hinterland were necessary to the existence of Irak. The issue therefore went to the League of Nations. That body despatched a neutral commission to and the position on the spot; this commission to study the position on the spot; this commission reported that the best settlement would be for the Mosul vilayet to be incorporated in Irak, if the British Government were prepared to prolong its mandate over that State for a period of twenty-five years. When the report of this commission came before the League in 1925 Britain gave the necessary guarantee, and the Council of The League unanimously ailotted the Mosul vilayat to Irak. The Turkish delegates, who at first recognised the decisive authority of the League, then declared that they would not be bound by its decisions. So the matter rested at the end of the year, with Irak in occupation of the disputed up to the temporary frontier, which was known as The Brussels Line. After at first breathing nothing but armed resistance to acceptance of the award, the Turks afterward assumed a more conciliatory note, and alarmed, it may be, by the threat of Italian aggression, accepted the frontier line demarcated by the League.

France and the Frontier.-If we touch for a few sentences on the position of France on the frontiers of India, it is not because they have any present day significance, but in order to complete this brief survey of the waxing and waning of external influences on Indian frontier policy. It is difficult to find any sound policy behind the efforts of France to obtain a coaling

purpose in it than a general pin-pricking policy, a desire to play the part of Russia, and perhaps a source of annoyance to Great Britain, which would form a useful lever for the exaction of considerable cessions in West Africa, particularly in the neighbourhood of Gambia, as the price of abstention. These embarrassments were slowly removed one by one after the conclusion of the Anglo-French Entente. Far otherwise was it in the East. The consolidation of French authority in French Indo-China was the prelude to designs for the expansion of this authority at the expense of Siam and to find compensation there for the veiled British protectorate of Egypt. There had earlier been mutterings in Burma. We were established in Lower Burma in the thrities and in the eighties the foolish and tyrannical King Theebaw, in Upper Burma, became an impossible neighbour, and ambitious Frenchinen were not averse to fanning his opposition to the British. However, if any hopes were entertained of extending the Asiatic possessions of France in this direction, they were dissipated by the Second Burmese War and the firm establishment of British rule. Far otherwise was it on the confines of Siam. It was the fixed purpose of British policy to preserve Siam as a buffer state between Burma, then a regular Province of the Indian Empire, and French Indo-China. This policy was definitely challenged by French encroachments on Siam Matters approached a crisis in 1894, and we were within measurable distance of a situation which might have ended in open war between the two States. But as in the case of Penideh, and later when Major Marchand marched across Africa to Fashoda, the imminence of hostilities made statesmen on both sides ask themselves what they might be going to fight about. They found there was nothing essential and an agreement was negotiated between the two Powers, which secured the independence and integrity of Siam. That agreement has been consolidated by wise and progressive rule in Siam itself, under its own independent sovereign, who is imbued with a strong friendship for Great Britain, whilst at the same time maintaining good relations with French neighbours.

The New Frontier Problem.—The whole purpose of this brief sketch has been to show that for three generations—most assuredly since the events leading to the Afghan War of 1838the Indian frontier problem has never been a local problem. It has been dominated by external influences-in the main the long struggle between Great Britain and Russia, for a brief period the German ambition to build up a dominant position in the East through the revival of the land route, and to a much lesser

station at Maskat in the Persian Gulf, and her communications, aerial operations and easy ong opposition to the steps necessary to extirposition at maskar in the reissant during the steps necessary to extirposition to the slave trade, and hold in check the immense traffic in arms which was equipping local aspects of the general problem. The all the tribesmen on our North-West Frontier tribesman was always an opponent to be with rifles of precision and a large supply of respected. Brave, hardy, fanatical, he has ammunition. We can find no more definite always been a first-class fighting man. Knowing every inch of the inhospitable country to which punitive operations must of necessity take place he has hung on our rearguards and given them an infinite of trouble. Even when armed with a jezail and when every cartridge had to be husbanded with jealous care, the tribesman was a respectable antagonist. Now the tribesmen are everywhere armed with magazine rilles, either imported through the Persian Gulf when gunrunning was a thriving occupation, stolen from British magazines, or secured from Russian and Atghan sources. They have an abundant supply of ammunition, Considerable numbers of the fighting men have been trained in the ranks of the Indian Army, either as Regulars in ranks of the indian Army, cities as a regular the Pathan regiments, or else in the tribal militias. We found this to our cost in the events following the Afghan War of 1910. The Afghan regular army was of little account. tribesmen who rose at the call of the jihad, especially in Waziristan, were of great account. They gave our troops the hardest fighting they have ever had on the Frontier; their marksmenship and fire discipline were described by experienced soldiers as admirable. The tribal militia, the keystone of the Curzon system, had for all practical purposes disappeared. What was to take its place?

Immediately following the Afghan War, the frontier positions were garrisoned by regular troops, but this was only a temporary measure. It may be said that the crux of the situation was in Waziristan. This sector of the Frontier has always been the most difficult of the whole, because of the intractable character of the people. Besides, possessing a bolt hole into Afghanistan they had in the past evaded effective punishment. In view of the complete disappearance of the external menace, and the consequent lapsing of any necessity to preserve open lines of communication which would enable us to go to the support of Afghanistan, now formally recognised in the Treaty of 1921 as a completely independent State, there were many who urged the desirability of complete withdrawal, even to the line of the Indus. This extreme school gained little support. Our position in Quetta on the one side and Peshawar on the other is fully consolidated, and no good case could be made out for withdrawing from it. On the other hand, there was a strong case made out for leaving the tribe-men severely alone from the Gomal to the Kurram, and dealing with them if they emerged from their tastnesses. The military standpoint was that the Waziris are absolutely dominant position in the East through the revival of the land route, and to a much lesser extent by the ambitions of France and Turkey. The circumstances affecting the Frontier that the only solution of operations in most arduous conditions; and the circumstances beyond it have greatly occupation of dominant points in Wazinstan, changed. Old dangers have disappeared, as far north as Ladha, and linking these posts with our military bases, and particularly with where in the world in this present time of swift good motor roads.

ma typically British compromise which specially arose from the changed conditions in which we found ourselves in 1922, when our troops were in occupation of Wazirstan as a result of the operations forced upon us for the suppression of the tribal outbreak which the Afghans stirred up in support of their invasion of India surred up in support of their invasion of india in 1919. The ensuing policy has been aptly described as the "half-forward" policy. It is in truth a repetition of the Sandeman policy, adapted to local conditions. There has been no withdrawal in the ordinary sense of the term, but the limit of the North Waziristan occupation was temporarily fixed at Ramzak, not at Ladha. A network of consequential roads was pushed forward. Its years terminated at Jamrud, at the easterly elaboration continues. In South Waziristau, entrance to the Khyber Pass, was in the autumn Wana has been re-occupied, partly in response of 1925 extended to Landi Khana, at the to a pressing invitation from the Wana Waziris, opposite end of the Pass and within a mile of the because they wanted to share the benefits frontier between India and Afghanistan.

This controversy lasted long. It resulted which they saw British occupation to be bringing to their cousins northward of them. In February, 1933, control over tribal territory was pushed forward beyond Razmak towards the Afghan Border because of a rebellion on the Afghan side and of the need to assist the King of Kabul by preventing excursions by bodies of Wazirs into His Majesty's disturbed territory. The work of control and of civilization is rapidly progressing in the whole territory. Of this particulars are given on 272 and following pages. One of its latest fruits is a request by the Afridis for roads in their country of Tirah, a beginning with construction has been made.

The main Indian rail-head, which for many

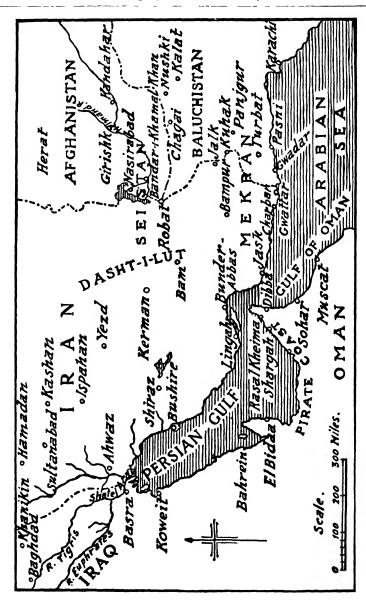

I.—THE PERSIAN GULF.

trontier policy is that the external menace has largely disappeared. No part of the frontier is more powerfully influenced by this consideration than the Persian Gulf. Our first appearance in the Gulf was in connection with the long struggle for supremacy with the Portuguese, the French and the Dutch, who had established trading stations there. With the capture and destruction of the great entrepot which the Portuguese had established at Ormuz, the supersession of the land by the sea route, and the appearance of anarchy in the interior the importance of the Gulf declined. The Indian Government remained there primarily to preserve the peace. This work is quietly and efficiently performed. Pracy was stamped out, the Trucial Chiefs, who occupy the Prate Coast, were gradually brought into close relations with the Government, the vessels of the Royal Navy kept watch and ward, and our consuls regulated the external affairs of the Arab rule-s on the Arab coast. In return for these services Great Britain claimed no selfish advantages. The waters of the Guli were kept free to the navigation of the ships of all nations, and though Great Britain could have made any territorial acquisitions she pleased she retained possession of only the tiny station of Bassidu. Left to herself Great Britain desired no other policy, but for a quarter of a century the Gulf was involved in European affairs. France sought to acquire a coaling station at Jissa, near Maskat, and obstructed the efforts of the British Government to stamp out the slave trade and to check the immense traffic in arms which was equipping the tribes on our land frontier with weapons of precision and quantities of ammunition. All causes of difference were gradually removed by agreements following the Anglo-French Entente. Russia sent one of her finest cruisers to "show the flag" in the Gulf, and established consular posts where there were no interests of preserve. She was credited with the intention of occupying a

From what has gone before it will be seen after the signing of the Anglo-Russian Agreement that the keynote of this discussion of Indian and disappeared with the collapse of Russian power following the Revolution. Then Turkey, either acting for herself, or as the avant courser of Germany, under whose domination she had passed, began to stir. She threatened the Shelkh of Bahrein by the armed occupation of the peninsula of Al-Katr, and moved troops to entorce her suzerainty over Koweit, the best port in the Persian Gulf and a possible terminus of the Baghdad Railway. Further to consolidate her interests, or to stake out a claim, Germany sent the heavily-subsidized ships of the Hamburg-America line to the Gulf, where they comported themselves as the instruments of Imperial policy rather than as inoffensive merchantmen. She also strove, through the agency of the firm of Wonkhaus, to acquire a territorial footing on the island of Shargah. These events stirred the British Government to an unusual activity in the waters of the Gulf.

Counter Measures.

The first effective steps to counter these influences were taken during the vigorous viceroyalty of Lord Curzon, who visited the Gulf during his early travels and incorporated a masterly survey of its features in his monumental work on Persia. He appointed the ablest men he could find to the head of affairs, established several new consulates, and was instrumental in improving the sea communications with the Gulf ports. The British Government also took alarm. They were fortified in their stand against foreign intrigue by the opinion of a writer of unchallenged authority. The American Naval writer, the late Admiral Mahan, placed on record his view that "Concession in the Persian Gulf, whether by tormal arrangement (with other Powers) or by neglect of the local commercial interests which now underlie political and military control, will imperial Great Britain's naval position in the Farther East, her political position in India, her commercial interests in both, and the Imperial tie between herself and Australasia." The Imperial standard and the other Parkies in the warm water port, and in particular with casting between herself and Australasia." The Imperial covetous eyes on the most dreadful spot in the Gulf, Bunder Abbas, This menace declined State, was set out by Lord Lansdowne in

words of great import—"We (i.e., His Majesty's Government) should regard the establishment of a naval base or of a fortifled port in the Persian Gulf by any other Power as a very grave menace to British interests, which we should certainly resist with all the means at our disposal." negative measures following these declarations were followed by a constructive policy when the oil fields in the Bakhtiari country, with a great refinery, were developed by the Anglo-Persian Oil Company, in which the Bitish Government has a large financial stake. But with the disappearance of these external forces on Gulf policy, as set out in the introduction to this section, the politics of the Persian Gulf receded in importance, until they are now. more than they were before these external influences developed, a local question, mainly a question of policy. They are therefore set out more briefly and those who desire a complete narrative are referred to the Indian Year Book for 1923, pp. 178-183. An interesting new feature in 1931 was the decision of the Persian Government to instal a Navy of their own in the Guilt. The fleet consisting of two sloops and four launches, all suitably armed, was built in Italy and duly arrived at its destination in 1932. It is at the outset officered by Italians. The immediate reason for the new fleet is that an increase in the Persian Customs tariff for revenue purposes led to extensive smuggling. The fleet is required to check it. The British Government in 1935 announced their decision to transfer then principal naval station in the Persian Guli from Henjam, on kishm island, off the Persian shore at the entrance of the Gult which they held on lease from the Persian Gult, to Bahrem, on the Western, Alabian, coast of the Gulf This move is calculated to remove causes of friction

Maskat.

Maskat, which is reached in about forty-eight hours from Karachi, is outside the Persian Gulf proper. It lies three hundred miles south of Cape Musandim, which is the real entrance to the Gulf, but its natural strength and historical prestige combine to make it inseparable from the polities of the Gulf, with which it has always been intimately associated.

Formerly Maskat was part of a domain which embraced Zanzibar, and the Islands of Kishm and Larak, with Bunder Abbas on the Persian shore. Zanzibar was separated from it by agreement, and the Persians succeeded in establishing their authority over the possessions on the eastern shore.

The relations between Britain and Maskat have been intimate for a century and more. It was under British auspices that the separation between Zanzibar and Maskat was effected, the Sheikh accepted a British subsidy in return for the suppression of the slave trade and in 1892 scaled his dependence upon us by concluding a treaty pledging himself not to cede any part of his territory without our consent.

The Pirate Coast.

Turning Cape Musandim and entering the Gulf Proper, we pass the Pirate Coast, controlled by the six Trucial Chiefs. The ill-name of this territory has now ceased to have any meaning, but in the early days it had a very real relation suitable for modern ocean-going steamers. It

to the actual conditions. The pirates were the boldest of their kind, and they did not hesitate to attack on occasion, and not always without success, the Company's ships of war. Large expeditions were fitted out to break their power, with such success that since 1820 no considerable punitive measures have been necessary. The Prucial Chefs are bound to Great Britain by a series of engagements, beginning with 1806 and ending with the perpetual treaty of 1853 by which they bound themselves to avoid all hostilities at sea, and the subsequent treaty of 1873 by which they undertook to prohibit altogather the traffic in slaves. The relations of the Trucial Chefs are controlled by the British Resident at Bushire, who visits the Pirate Coast every year on a tour of inspection.

The commercial importance of the Pirate Coast is increasing through the rise of Debai. Formerly Lingah was the entrepot for this trade, but the exactions of the Belgian Customs officials in the employ of Persia drove this traffic from Lingah to Debai. The Trucial Chiefs are—Debai, Abu Thabee, Shargah, Ajman, Um-al-Gawain and Kas-el-Kheyma.

Bahrein.

North of the Pirate Coast lies the little Archipelago which fc.ms the chiefship of the Shelkh of Bahrein. Of this group of islands only those of Bahrein and Maharak are of any size, but their importance is out of all proportion to their extent. This is the great centre of the Gulf pearl fishery, which, in a good year, may be worth half a million pounds sterling. The anchorage is wretched, and at certain states of the tide ships have to lie four miles from the shore, which is not even approachable by boats, and passengers, mails and cargo have to be handed on the donkeys for which Bahrein is famous. But this notwithstanding the trade of the port is valued at over a million and a quarter sterling, and the customs revenue, which amounts to some eighty thousand pounds, makes the Shelkh the richest ruler in the Gulf.

In the neighbourhood of Bahrein is the vast burying ground which has hitherto baffled archeologists. The generally accepted theory is that it is a relic of the Phenicians, who are known to have traded in these waters.

The British Government as was mentioned earlier in this review announced in 1935 that they proposed transferring the principal British Naval station in the Gulf from Henjam, on the Persian side of the water, to Bahrein

Koweit.

In the north-west corner of the Guif lies the port which has made more str than any place of similar size in the world. The importance of Koweit lies solely in the fact that it is a possible Guif terminus of the Baghdad Railway. This is no new discovery, for when the Euphrates Valley Railway was under discussion, General Chesney selected it under the alternative name of the Grane—so called from the resemblance of the formation of the Bay to a pair of horns—as the sea terminus of the line. Nowhere else would Koweit be called a good or a promising port. The Bay is 20 miles deep and 5 miles broad, but so shallow that heavy expense would have to be incurred to render it suitable for modern ocean-going steamers. It

and the clean thriving town is peopled by some 20,000 inhabitants, chiefly dependent on the sea, for the mariners of Koweit are noted for their boldness and hardihood.

Muhammerah.

On the opposite side of the entrance to the Shatt-el-Arab lie the territories of Sheikh Khazzal of Muhammerali. The town, favourably situated near the karun River, has grown mouth of the grown in importance since the opening of the Karun River route to trade through the enterprise of Mesers. Lynch Brothers. This route provides the shortest passage to Ispahan and the central tableland, end already competes with the older route by way of Bushire and Shiraz. This importance has grown since the Anglo-Persian Oil Company—now called the Anglo-Itan Oil Company established refinences at Muhammerah for the oil which they win in the rich fields which they have tapped near Ahwaz. Its importance will be still further accentuated, by the opening ϵf the railway to Khorremabad by way of Dizful.

Basra.

In a sense Basra and Turkish Arabistan can and the sense tasks and turking hardly be said to come within the scope of the frontiers of India, yet they are so inclused by associated with the politics of the Gulf that they must be considered in relation thereto. Basra is the present sea terminus of the leader of the terminus of the leader of the season of the leader Baghdad Railway. It stands on the Shatt-el-Arab, sixty miles from its mouth, favourably attuated to receive the whole water-borne trade of the Tigris and Euphrates Rivers. The local traffic is valuable, for the richness of the date groves on either side of the Shattel-Arab is indescribable, there is a considerable entrepot traffic, whilst Basra is the port of entry for Baghdad and for the trade with Persia, which follows the caravan route via Kermanshah and Hamadan.

The political destinics of Basra are at present wrapped up with the destinics of the new Arab State which we have set up in Mesopotamia under King Felsal. When the war was over we found ourselves committed to immense, undefined and burdensome responsi-bilities in that land. The sound concepts which dictated the original expedition were dislocated in the foolish advance to Baghdad; then the great military enterprises necessitated by the necessary modifications by means of a protocol fall of Kut-al-Amara carried our frontier north which, like the Treaty itself, will be subject to Mosul and the mountains of Kurdistan, east to the Persian boundary, and west to the confines of Trans-Jordania. Amongst ardent Imperialists, there was undoubtedly the hope that this immense area would be in one way or anomor an integral part of the British Empire. The cold integral part of the British Empire. The cold ing Parties that, notwithstanding the provisions the Arabs rose in a revolt which showed that any demination could only be maintained by upon Iraq becoming member of the League and in any case not later than four immense area would be in one way or another an force of arms and that the cost would be prodigious. In these circumstances King Feisal was imported from the Hedjaz and installed on the throne under the aegis of Great Britain. Still we were committed to the support of the new kingdom, and that most dangerous condition arose—responsibility without any real power for that object shall be entered into between unless King Feisal was to be a mere puppet, them before the expiration of the above period.

is sheltered from all but the westerly winds, immense expenditure and indefinite military commitments. In these circumstances there was an insistent demand for withdrawal from the land. British policy moved slowly towards that end, but a definite step was taken in 1923 The Secretary of State for the Colonies announced this policy in a statement which is reproduced textually, for the purpose of reference. Addressing the House of Lords on May 3rd he

> Your Lordships will remember that the Cabinet have been discussing this matter for some time and decisions have now been taken. Sir Percy Cox has accordingly been authorised by His Majesty's Government to make an announcement at Baghdad, the terms of which I propose to read out to Your Lordships. This announcement was drawn up in consultation with King Feisal and his Government, and has their cordial assent. It is being published at Baghdad to-day.

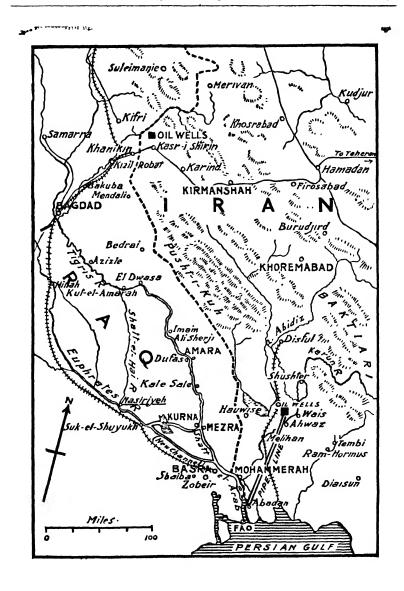

The announcement is as follows:-

"It will be remembered that in the autumn of last year, after a lengthy exchange of views, it was decided between the Governments of His Britannic Majesty and His Majesty King Felsal that a Treaty of Allance should be entered into between His Britannic Majesty and His Majesty the King of Iraq. This Treaty, which was signed on the 10th October, 1922, and the term of which was to be twenty years (subject to periodical revision at the desire of either party) provided for the establishment of an independent Constitutional Government in Iraq, enjoying a certain measure of advice and assistance from Great Britain of the nature and extent indicated in the text of the Treaty itself and of subsidiary Agreements which were to be made thereund . .

Since then the Iraq Government has made great strides along the path of independence, and stable existence and has been able successfully to assume administrative responsibility and both parties being equally anxious that the commitments and responsibilities of His Majesty's Government in respect of Iraq should be terminated as soon as possible, it is considered that the period of the Treaty in its present form can conveniently be shortened. In order to obviate the inconvenience of introducing amendments into the body of a Treaty already which, like the Treaty itself, will be subject to ratification by the Constituent Assembly.

"Accordingly a protocol has now been signed by the parties in the following terms :-

of Nations and in any case not later than four years from the ratification of peace with Turkey. Nothing in this protocol shall prevent a fresh agreement from being concluded with a view to regulate the subsequent relations between the High Contracting Parties; and negotiations for that object shall be entered into between

It will be noticed that under this protocol the Treaty in its present form was to terminate on the entry of Iraq into the League of Nations or in four years, whichever might be earlier.

The position of Iraq as regads the Leaguer was that when the Treaty was ratified His Britannic Majesty was bound under Article 6 to use his good offices to secure the admission of Iraq to membership of the League of Nations as soon as possible. His Majesty's Government would be in a position to take this step on the fulfilment of the two following essential conditions, namely, the delimitation of the frontiers of Iraq, and the establishment of a stable government in accordance with the Organic Law.

The Council of the League of Nations in January, 1932, adopted the report of the Iraq Commission recommending the termination of the mandate subject to the admission of Iraq to membership of the League and Iraq entering into a number of undertakings, with regard to treatment of minorities and the administration of justice. This meant the termination of the mandate when the next Assembly of the League voted for the admission of Iraq to League membership.

Under the Treaty of Lausanne between Turkey and the Powers, which was signed in 1923, it was agreed that the frontier between King Felsal's State and Turkey, the important frontier because the future of Mosul was in dispute, should be settled by the League of Nations, should Great Britain and Turkey be unable to come to agreement by direct negotiation. These direct negotiations were opened at Constantinople, but no agreement was reached, so the question was opened before the Council of the League in September 1924. Whilst the matter was under discussion complaint was made by Great Britain that Turkey had violated the provisional frontier drawn in the Treaty of Lausanne, and certain irregular hoscilities were carried on in the disputed zone. This matter too was remitted to the League, and a further provisional boundary was drawn, which was accepted by both parties.

Here the matter remained until the autumn of 1925. In order to secure the material for a decision the League of Nations despatched a neutral commission to Mosul to investigate the situation. This commission produced a long and involved report, but one which led by devious paths to a common sense recommendation. It was that the first essential in the Mosul vilayet is stable government. The desires of the people were for incorporation in the State of Iraq. If therefore the British Government was willing to extend its mandate over Iraq for a further period of twenty-five years—a guarantee of stable government—then Mosul should be incorporated in Iraq; if Britain was not willing, then Mosul should return to Turkey. When the matter came before the Council of the League Great Britain gave the necessary guarantee. The Turks thereupon challenged the whole competence of the Council to give an award under the terms of the Treaty of Lausanne. The issue was remitted to the Court of International Justice at The Hague which decided in favour of the competence of the Council. About this time there was published the "eport of a distin-

guished Esthonian General, General Laindoner, who had been despatched by the League to investigate allegations of irutality by the Turks in deporting Christians from their own zone, and this report was of the most damning character. Great Britain having given the necessary assurance, that she was prepared to extend her mandate over Iraq for a further twenty-five years, thereupon the Council of the League allocated the whole of the area in dispute, right up to the temporary frontier—commonly called The Brussels Line—to Iraq. The Turks refused to accept the award and withdrew from Geneva threatening force. Later, wiser counsels prevailed and in 1926 Turkey accepted a frontier substantially as drawn by the League.

A New Treaty.—A new Treaty regulating the relation of Iraq with Great Britain, the Mandatory Power, was negotiated in 1927, and signed towards the end of the year.

The Treaty declares that there shall be peace and friendship between His Britannic Majesty and His Majesty the King of Iraq. It states that "Provided the present rate of progress in Iraq is maintained and all goes well in the interval, His Britannic Majesty will support the candidature of Iraq for admission to the League of Nations in 1932." It stipulated that separate agreements superseding those of March 25, 1924, shall regulate the financial and military relations.

The King of Iraq undertook to secure the execution of all international obligations which His Britannic Majesty had undertaken to see carried out in respect of Iraq. He also undertook not to modify the existing provisions of Iraq's organic law so as adversely to affect the rights and interests of foreigners, and to constitute any difference in the rights before the law among Iraquis on the grounds of differences of race, religion, or language.

There was provision for full consultation between the high contracting parties in all matters of foreign policy which may affect their common interests. The King of Iraq undertook so soon as local conditions permit to accede to all general international agreements already existing, or which might be concluded thereafter with the approval of the League of Nations, in respect of the slave trade, the traffic in drugs, arms and munitions, the traffic in women and children, transit navigation, aviation, and communications, and also to execute the provisions of the Covenant of the League of Nations, the Treaty of Lausanne, the Anglo-French Boundary Convention, and the San Remo Oil Agreement in so far as they apply to Iraq.

There was provision against discrimination in matters concerning taxation, commerce, or navigation against nationals or companies of any State which is a member of the League of Nations, or of any State to which the King of Iraq had agreed by Treaty that the same rights should be ensured as if it were a member of the League.

Any difference that might arise between the high contracting parties was to be referred to the Permanent Court of International Justice provided for by Article Fourteen of the Covenant of the League. The Treaty was made

Railway Position in the Middle East.

subjected to revision with the object of making | ticance | hurther south mes Lingah, reputed all the modifications required by the circumstances when Iraq entered the League of Nations

It is important to remember that there is a considerable difference between the vilayet of Basra and the other portions of King Feisal's State. Basra has for long been in the closest commercial contact with India, and is in many respects a commercial appanage of Bombay. Its people have not much in common with those of the North. They took no part in the Arab rising which followed the war, and they ask nothing better than to remain in touch with India and through India with the British Government. If we are correct in the supposition that Basra is destined to be the great port of the Middle East, then its future under an Arab State, with no experience of administration in such conditions, is one of the greatest interest, which can hardly be regarded as settled by the policy underlying the declaration which is set out above.

The Persian Shore.

The Persian shore presents fewer points of permanent interest. The importance of Bushire is administrative rather than commercial It is the headquarters of Persian authority, the residence of the British Resident, and the centre of many foreign consuls. It is also the main entrepot for the trade of Shiraz, and competes for that of Ispahan. But the anchorage 18 the idea of rail connection, and if ever a railway port of Chamber. II.—SEISTAN.

importance of Seistan. Yet it was for many years a serious preoccupation with the Government of India. Seistan lies midway north and south between the point where the frontiers of Russia, Persia and Afghanistan meet at years a serious preoccupation with the Government of India. Selstan lies midway north and tating plague cordon, sought to establish insouth between the point where the frontiers guence, and to stifle the British trade which of Russia, Persia and Atchanistan meet at was gradually being built up by way of Nushki. Zulfikar and that where the frontiers of Persia These efforts died down before the presence and of our Indian Empire meet on the open sea at Gwattur. It marches on its eastern border with Afghanistan and with Baluchistan, it commands the valley of the Helmand, and with it the road from Herat to Kandahar, and its immense resources as a wheat-producing region have been only partly developed under Persian misrule. It offers to an aggressive rival, an admirable strategic base for future military operations; it is also midway athwart this strategic numerical first numerical firs the track of the shortest line which could be built to connect the Trans-Caspian Railway with the Indian Ocean, and if and when the line from Askabad to Meghed were built, the Quetta to the Selstan border at Killa Robat temptation to extend it through Selstan would be strong. Whilst the gaze of the British was provided with fortified posts, dak bungalows, wells. and all facilities for caravan traffic. concentrated on the North-West Frontier, and to possible lines of advance through Kandahar to Quetta, and through Kabul to Peshawar, there can be little doubt that Russian attenthon was directed to a more leisurely movement through Seistan, if the day came when she moved her armies against India.

licance further south ites Lingan, reputed to be the prettiest port on the Persian coast, but its trade is being diverted to Debai on the Pirate Coast. In the narrow channel which forms the entrance to the Gulf from the Arabian Sea is Bunder Abbas. Here we are at the key of the Gulf. Bunder Abbas is of some importance as the outlet for the trade of Kerman and Yezd. It is of still more importance as a possible naval base. To the west of the town between the Island of Kishm and the mainland, lie the Clarence Straits which narrow until they are less than three miles in width, and yet contain abundance of water. Here, according to sound naval opinion, there is the possibility of creating a naval base which would command the Gulf. The great obstacle is the climate, which is one of the worst in the world. On the opposite shore, under the shadow of Cape Musandim, shore, under the shadow of Cape Musandim, fies another sheltered deep-water anchorage, Elphinstone's Inlet, where the climate conditions are equally vile. But between these two points there is the possibility of controlling the Gulf just as Gibraltar controls the Mediterranean. For many years Bunder Albhas loomed large in public discussions as the possible wear water nort, for which Russia was sible warm water port for which Russia Was seeking There was established a British Naval station at Hemain, a small island close to kism, where the station was constructed under agreement with the Persian authorities Its evacuation by Great Britain in favour of Bahrem was decided upon by the British wretched and dangerous, the road to Shiraz Government in 1935. On the Mckian coast, passes over the notorious kotals which preclude there is the cable station of Jask, and the possible

The concentration of public attention on the the early years of the century. Having Russia Persian Gulf was allowed to obscure the frontier field Khorassan, her agents moved into Seistan and through the agency of the Belgian Customs officials, "scientific missions" and an irriof the McMahon mission, which, in pursuance of Treaty rights, was demarcating the boundary between Persia and Afghanistan, with special reference to the distribution of the waters of the Helmand. They finally ceased with the conclusion of the Anglo-Russian Agreement. Since then the international import-

The natural conditions which give to Scistan this strategic importance persist. For a time, British influence increased in substance through the Seistan trade route. The distance from wells, and all facilities for caravan traffic.
The railway was pushed out from Spezand, on the Bolan Railway, to Nushki,
so as to provide a better starting point for the caravans than Quetta. This line was extended to Duzdap, 54 miles on the Persian side of the through Seistan, if the day came when she moved her armies against India.

Whether with this purpose or not, Russian establishment of peace supported only two intrigue was particularly active in Seistan in

Persian insistence on the collection of Customs duties on rations taken across their frontier for the railway staff. This led to the stoppage of train running on the Persian side of the Krontier Negotiations for years dragged on to bring about a reasonable settlement in regard to the stuatton The Persian Foreign Munister. Mons. B kazemi, paid a visit to New Delhi in

III.—IRAN.

From causes which only need to be very in the north-west retired before the Bolsheviks, briefly set out, the Iran question as affecting the Iranians had no use for the Agreement and Indian frontier policy has receded until it is of it soon became a dead instrument. It was finally no account. Reference is made in the introduction to this section to the fact that the conclusion of the Anglo-Russian Agreement left us a bitter legacy in Persia. That Agreement divided Iran into two zones of influence, and division of their kingdom between the two Powers, though no such end was in view German agents, working cleverly on this feeling, established an influence which was not suspected, and when the war broke out they were able to raise the tribes in opposition to Great Britain, in the South, and after the fall of Kut-al-Amara when a Turkish Division penetrated Western Iran, they exercised a strong influence in Teheran. With the defeat of Turkey and the Central Powers this influence disappeared, but at that time there was no authority in Iran besides that of the British Government, which had strong forces in the North-West and controlled the southern provinces through a force organised under British officers and called The South Persian Rifles. It was one of the first tasks of the British Government to regularise this position, and for this purpose an agreement was reached with the then Persian Government, the main features of which were :-

To respect Persian integrity :

To supply experts for Persian administration;

To supply officers and equipment for a Persian force for the maintenance of

To provide a loan for these purposes; To co-operate with the Persian Government in railway construction and other forms of transport.

Both Governments agreed to the appointment of a joint committee to examine and revise the Customs tariff.

The second agreement defined the terms and conditions on which the loan was to be made to Persia. The loan was for £2,000,000 at 7 per cent. redcemable in 20 years. It was secured on the revenues and Customs' receipts assigned for the repayment of the 1911 loan and should these be insufficient the Persian Government was to make good the necessary sums from other sources.

The Present Position.—We have given the main points in the Anglo-lian agreement, because few documents have been more misunderstood. Those who desire to study it in greater detail will find it set out in the Indian Year Book for 1921, page 138 et seq. It has been explained that most Itanians

rejected and the advisers who were to have assisted Persia under it withdrew.

A remark frequently heard amongst soldiers and politicians in India after the War was that Great Britain must take an active hand in han because she could not be a passive witness to chaos in that country. The view always taken in the Indian Year Book was that the internal affairs of linn were her own concern; if she preferred chaos to order that was her own look-out, but left alone she would hammer out some form of Government. That position has been justfied. The Sirdar Sipah, or commander-inchef, a rough but energetic soldier, gradually took charge of lianuan affairs and established a thinly-veiled military dictatorship which made the Government feared and respected throughout the country for the first time since the assassination of Shah Nasr-ed-din. A body of capable Americans under Dr. Millspaugh 10-tored order to the chaotic finances. Thes two forces operating in unison gave lian the best gov-ernment she had known for a generation. But the Sirdar Sipah chafed under the irregularities of his position, with a Shah spending his time in Europe and wasting the resources of the country. He moved to have his position regularised by the deposition of the absentee Shah and his own ascent of the throne. At Shan and his own ascent of the opposition of the Mollahs, but in 1925 prevailed, and the Shah was formally deposed and the Sirdar Sipah was forming deposed and the Strair Span chosen monarch in his place under the title of Reza Shih Pahlavi. The change was made without disturbance, and Iran entered on a period of peace and consolidation which has removed it from the disturbing forces in the post-war world. Since then considerable progress has been made with the reform of the administration, and many projects are afoot for the improvement of communications, which is the greatest need of the land, such as an air service to Teheran and railway construction. The least reassuring episode was the departure of the American financial mission, which had done admirable work in the restoration of the finances. When their contract expired Dr. Millspaugh and his colleagues were offered a renewal of it on terms which they did not regard as satisfactory, especially in regard to the powers they were to exercise. They therefore withdrew from the country, and have been replaced by other foreing advisers. The general situation was gravely disturbed in 1932 by the sudden termination by the Iran Government of the Anglo-Iran construed it into a guarantee of protection against | Oil Co's concession, a matter affecting one of all extenal enemies. When the British troops the biggest industrial undertakings in the world and millions sterling of capital. The intervention of the British Government led to the reference of the trouble to the League of Nations and this paved the way for negotiations between the Company and the Iran Government. While these were being settled some at Tcheran

progress was also made with general negotiations between the British and Iran Governments for an agreement covering all outstanding points of difficulty between them.

Mi Knatchbull Hugerson is British Minister

IV.—THE PRESENT FRONTIER PROBLEM.

Under what is called the Durand Agreement with the Amir of Afghanistan, the boundary between Indian and Afghanistan influence was settled, and it was delimited in 1903 except for a small section which was delimited atter the Afghan War in 1919. But the Government of India have never occupied up to the border. Between the administered territory and the Durand line there lies a belt of territory of varying width extending from the Gomal Pass in the south, to Kashuur in the north; this is generically known as the Tribal Territory. Its future is the keynote of the interminable discussions of frontier policy for nearly half a century.

This is a country of deep valleys and secluded glens, which nature has fenced in with almost inaccessible mountains. It is peopled with wild tribes of mysterious origin, in whom Afghan, Tartar, Turkoman, Persian Indian, Arab and Jewish intermingle. They had lived their own lives for centuries, with little intercourse even amongst themselves, and as Sir Valentine Chirol truly said "the only bond Sir Valentine Chirol truly said "the only bond that ever could unter them in common action was the bond of Islam." It is impossible to understand the Frontier problem unless two facts are steadily borne in mind. The strongest sentiment amongst these strange people is—in was until computatively recently—the desire to be left alone. They value them independente much more than their lives. The other texts, that the country does not The other factor is that the country does not suffice even in good years to maintain the population. They must find the means of subsistence outside, either in trade, by service in the Indian Army or in the Khasadars, or else in the outlet which hill-men all the world over have utilised from time immemorial, the raiding of the wealther and more peaceful population of the Pluns. The internal peace entorced among them by British control has in lite years. led to an increase in their numbers. and this has aggravated their economic problem

Frontier Policy.

The policy of the Government of India toward the Independent Territory has ebbed and flowed in a remarkable degree. It has fluctuated between the Forward School, which nuctuated between the Forward School, which would occupy the frontier up to the confines of Afghanistan, and the school of Masterly Inactivity, which would leave the tribesmen entirely to their own resources, punishing them only when they raided British territory Behind both the policies lay the menace of a Russian invasion, and that coloured our frontier policy until the Angio-Russian Agreement. This induced what was called Hit and Ratire This induced what was called Hit and Retire tactics. In the half century which ended in 1897 there were nearly a score of punitive ex. The rallways gave a powerful stimulus to trade peditions, each one of which left behind a and the Lower Swat Canal converted frac-

There yet remains a small part of British legacy of distrust, and which brought no perladia where the King's writ does not run manent improvement in its train. The fruit manent improvement in its train. The fruit manent improvement in its train. The fruit of the suspicion thus engendered was seen in 1897. Then the whole Frontier, from the Malakand to the Gomal, was ablaze. The extent of this rising and the magnitude of the millitary measures which were taken to meet it compelled a consideration of the whole position. The broad outlines of the new policy were laid down in a desputel from the Secretary of State for India, which prescribed for the Government the "limitation of your interference with the tripes, so as to avoid the exference with the tripes, so as to avoid the extension of administrative control over tribal territory." It fell to Lord Curzon to give effect to this policy. The main foundations of his action were to exercise over the tribes the political influence requisite to secure our imperial interests, to pay them subsidies for the performance of specific duties, but to respect their tribal in lependence and leave them, as far as possible, free to govern themselves according to their own traditions and to follow their own inherited habits of life without let of hindrance.

New Province.

As a first step Lord Curzon took the control of the tribes under the direct supervision of the Government of India. Up direct to this point they had been in charge of the Government of the Punjab, a province whose Government of the Punjab, a province whose head is busied with many other concerns. Lord Curzon created in 1901 the North-West Frontier Province, and placed it in charge of a Chief Commissioner, with an intimate frontier experience, directly subordinate to the Government of India. This was a revival of a scheme prepared by Lord Lytton in 1877, and often considered afterwards, but which had slipped for lack of driving power. Next, Lord Curzon withdrew the regular troops so far as possible from the advanced posts. and far as possible from the advanced posts, and placed these fortalices in charge of tribal levies, officered by a handful of British officers. The most successful of these was the Khyber Rifles, which steadfastly kept the peace of that historic Pass until 1919. At the same time the regular troops were cantoned in places whence they could quickly move to any danger point, and these bases were connected with the Indian railway system. In pursuance of this policy frontier railways were run out to Dargai, and a narrow-gauge line, since converted to the broad-gauge, was constructed from Kushalgarh to Kohat, at the entrance of the Kohat Pass, and to Thal in the midst of the Kurram Valley. These railways were completed by lines to Tonk and Bannu. By this means the striking power of the regular forces was greatly increased. Nor was the policy of economic development neglected. The railways gave a noweful stimulus to treads a narrow-gauge line, since converted to the

tious tribesmen into successful agriculturists. This policy of economic development is receiving a great development through the completion of the Upper Swat Canal (q. v. Irrigation). Now it is completed there are other works awaiting attention. For many years this policy was completely justified by results.

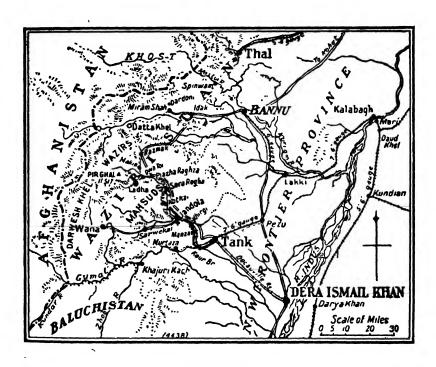

A New Policy.

It saved us from serious complications for nearly twenty years, although the position could never be said to be entirely satisfactory, particularly in Waziristan, peopled by the most reckless raiders on the whole by the most retailers rathers on the whole border-line, with a bolt hole into Afghanistan when pressed from the British side. It endured through the Great War and did not break down until the Amir of Afghanistan sought refuge from his internal troubles in a jehad against India. In this insane enterprise the Afghans placed less reliance in their regular troops which have never offered more than a contemptible resistance to the British forces than in the armed tribesmen. In this they were justified, for the Indian Military authorities failed to give timely support to the advanced militia posts, some of these posts were ordered to withdraw, the Militia collapsed and the most serious fighting was with the tribesmen. The tribal levies collapsed with almost universal swiftness. The Southern Waziristan Militia broke and there was serious trouble throughout the Zhob district. The Afridis, our most serious enemies in 1897, and the most nowerful of the tribes on the Northcontemptible resistance to the British forces the most powerful of the tribes on the Norththe most powerful of the tribes on the North-West Frontier, remained fairly quiet throughout the actual hostilities with Afghanistan, but later it was necessary to take measures against a leading malcontent and destroy his fort at Chora. But the Mahsuds and the Waziris broke into open hostilities. Their country lies within the belt bounded by the Durand Line and the Afghan frontier on the west and Line and the Afghan frontier on the west, and by the districts of Bannu and Dehra Ismail Khan on the east. Amongst them the Afghan emissaries were particularly active and as they could put in the field some 30,000 warriors, 75 per cent. armed with modern weapons of precision, they constituted formidable adversaries. They refused to make peace even when the Afghans craved in. They rejected our terms and active measures were taken against them. The fighting was the most severe in the history of the Frontier. The Mahsuds fought with great tenacity. Their shooting was amazingly good; their tactics were admirable, for amongst their ranks were many men trained either in the Militia or in the Indian Army; and more than once they came within measurable distance of considerable success. They were assisted by the fact that the best trained troops in the Indian Army were still overseas and younger soldiers were opposed to them. But their very tenacity and bravery were their own un-doing; their losses were the heaviest in the long history of the Borderland and when the Mahsuds made their complete submission in September 1921 they were more severely chastened than at any time during their career.

A New Chapter.—As the result of the Afghan War of 1919, Indian frontier polloy was again thrown into the melting pot. There was much vague discussion of the position

in the course of the months which followed the Afghan War and the troubles in Waziristan which succeeded it, but this discussion did not really come to a head until February-March 1922. The Budget then presented to the country revealed a serious financial position. It showed that despite serious increases in taxation, the country had suffered a series of deficits, which had been financed out of borrowings. Further heavy taxation was proposed in this Budget, but even then the equilibrium which budget, but even then the equilibrium which the financial authorities regarded as of para-mount importance was not attained. When the accounts were examined, it was seen that the heaviest charges on the exchequer were those under Military Expenses, and that there those under Military Expenses, and that there was an indefinitely large, and seemingly unending expenditure on Waziristan. This forced the Military, and allied with it the Frontier, expenditure to the front. In actual practice the discussion was really focussed on Waziristan. In essentials it was the aged contact the discussion of the discussion was really focused on the first of troversy-shall we deal with this part of the Frontier on what is known as the Sandeman system, namely, by occupying commanding posts within the country itself, dominating the tribesmen but interfering little in their own affairs; or shall we revert to what was known as the close border system, as modified by Lord Curzon, of withdrawing our regular troops to strategic positions outside the tribal area, leaving the tribesmen, organised into militia, to keep the passes open, and punishing the tribes-men by expeditions when their raiding propensities become unbearable.

The Curzon Policy.—The Curzon policy, adopted in 1899, to clear up the aftermath or the serious and unsatisfactory Frontier rising in 1897, was a compromise between the "occupa-tion" and the "close border" policies. It was based on the withdrawal of the regular troops so far as possible to cantonments in rear whilst the frontier posts, such as those in the Tochi at Wana and in the Khyber and Kurram were held by militia, recruited from amongst the tribesmen themselves. The cantonments for regular troops were linked so far as possible with the Indian railway system, so as to permit of rapid reinforcement. But it must be remembered that like all Frontier students, Lord Curzon did not regard this as the inal policy. He wrote in the Memorandum formulating his ideas: "It is of course inevitable that in the passage of time the whole Waziri country up to the Durand line will come more and more under our control. No policy in the world can resist or greatly retard that consummation. My desire is to bring it about by gradual degrees and above all without the constant aid and presence of British trops." The Curzon policy, though it was not pursued with the steadfastness he would have followed if he had remained in contwould have followed if he had remained in control, gave us moderate—or rather it should be said bearable—frontier conditions until the Afghan War. It then broke down, because the tribal militia, on which it was based, could not, when left without the support of regular troops in the day of need, withstand the wave of fanaticism and other conditions set up by the Afghan invasion of 1919. The Khyber militia faded away; the Waziri militia either mutinied, as at Wana, or descried. The pillar of the Curzon system fall. deserted. The pillar of the Curzon system fell.

VAZIRISTAN.

The Policy.—The policy first adumbrated to meet these changed conditions was outlined by Lord Chelmsford, the then Viceroy, in a speech which he addressed to the Indian Legislature. He said it had been decided to retain commanding posts in Waziristan; to open up the country by roads; to extend the main Indian railway system from its then terminus, Jamrud, through the Khyber to the frontier of Afghanistan, and to take over the duties of the Militia by regular troops That immediate policy was soon modified so far as the policing of these frontier lines by regular troops was concerned. Such duties are immensely unpopular in the regular army, which is not organised and equipped for work of this character. Irregulars have always existed on the frontier, and as they had disappeared with the Militia, it was necessary to recreate them. The new form of irregular was what have been called Khassadars and Scouts. The Khas-

sadar is an extremely irregular. He has no British officers and no uniform, except a distinguishing kind of pagri. In contradistinction to the old Militia, he finds his own rifle. As one informed observer remarked, the beauty of the system is that so long as the Khassadars, under their own headmen, secure the immunity of the caravans and perform their other police duties, they draw their pay and no questions are asked. If they desert in the day of trouble, they lose their pay but the Government loses no rifles, nor does it risk mutiny or the loss of British and Indian officers. But the application of this policy produced an acute controversy. It was one thing to say that commanding posts in Wazirstan should be retained; it was another to decide what these posts should be. We must therefore consider the special problem of Waziristan. The Scouts are a mobile, mounted, irregular force not territorially recruited, officered by British officers.

V.—WAZIRISTAN.

follows is drawn from an admirable article contributed some years ago to "The Journal of the United Service Institution of India," written by Lt-Col. G. M. Routh, D.S.O.

Geographically Waziristan is a rough paral-lelogram averaging 60 miles from East to West and 160 from North to South. The western half consists of the Suleiman Range gradually rising up to the ridge from five to ten thousand feet high, which forms the water-shed between the Indus and the Helmund Rivers and corresponds with the Durand Line soparating India from Afghanistan. This is the western boundary. On the east is the Indus. North is the water-shed of the Kurram River running East and West about 30 miles north of Bannu separating Waziristan from the Kohat District South is a zigzag political boundary from the Durand Line running between Wana and Fort Sande-man in Baluchistan with a turn southwards to the Indus.

The western half is a rugged and inhospitable medley of ridges and ravines straggled and confused in hopeless disarray. The more inhabited portions lie well up the slope at heights of four to six thousand feet. Here are our outposts of Wana and Ladha some 15 and 20 miles respectively from the Durand Line, in the centre of the grazing district, the latter within five miles of

important villages of Kaniguram and Makin.
The submontane tracts from the hills to the Indus vary from the highly cultivated and irrigated land round Bannu to the sand desert in the Marwat above Pezu.

Where irrigation or river water is obtainable cultivation is attempted under conditions which can hardly be encouraging. Other tracts like that between Pezu and Tank, usually pastoral, can only hope for an occasional crop after a lucky rainfall.

We can now approach the real frontier question of the day, the future of Waziristan. What follows is drawn from an admirable article and Batanni, only the first two are true Wazirs. Their villages are separate though dotted about more or less indiscriminately, and inter-marriage is the exception—in fact all traditionally are in open strife, a circumstance which, until some bright political comet like the Afghan War of 1919 joined them together, as materially aided our dealings with them.

> Unlike other parts of India, however, these wild people acknowledge little allegiance to maliks or headmen. No one except perhaps the Mulla Powindah till his death in 1913 could speak of any portion of them as his following.

Policy.—The policy of the British was at first one of non-interference with the tubes Even now only part of the country is administered Gradually it was found that more and more supervision became necessary to control raiding and this was attempted by expeditions to portions of the country with Regulars, followed by building posts and brick towers to be held by Militia These posts were at first placed at the points where raiders usually debouched. The Political Officers, at arst supported by Regulars, built up from 1904 onwards a force of some 3,000 Militia with British Officers at of solue 3,000 minute with Latest Chief disposal, who were backed up by the garrisons at Bannu and Dera Ismail Khan. In addition certain allowances were made to the tribes for good behaviour, prevention of raids and surrender of offenders when required: also for tribal escorts as necessary. Gradually, also for tribal escorts as necessary. Gradually, as occasion required, posts were occupied. Wana was occupied in 1895 at the request of the Wana Wazirs. Similarly the Tochi in 1896. In the comprehensive expedition of 1895-96 when this policy was put into effect, the British arms were shown in every remote valley in the value hope of taming the Mahaude. lucky rainfall.

Inhabitants.—The inhabitants, unable to support existence on their meagre soil, make up the margin by armed robbery of their richer and more peaceful neighbours.

The name originates according to tradition from one Wazir, two of whose grandsons were in the product to the troops on a liberal scale. A Programme.—Lt.-Col. Routh then outlined a possible policy for Waziristan. We give it textually, because we believe that when it was written it reflected how military opinion in India was developing:—

"To the unprejudiced mind it appears more practical to grasp the nettle firmly and dominate the inhabited tracts. Why should not the road now being made to Ladha be continued 36 miles north to the Toch road at Datta Khel and 29 miles south to Wans? Why should we not occupy the healtaier portions of Waziristan rather than the foothills or Civ-Indus zones? The Razmak district round Makin 6,000 feet up is both healthy and fertile. The same applies to the Shawai valley laying behind Pir Gui, the national peak near Ladha rising to a height of 11,556 feet above the sca. The Wana plain, 5,000 feet up, 30 miles by 15, could with railways support an army corps; there is no doubt that support an array corps; there is no doubt that a forward railway policy will help to solve the problem. A line has been surveyed from Tank to Draband and thence up the valley to Fort Sandeman, so connecting with the Zhob and perhaps later to Wana. The Gumal Tangi from Murtaza to Khajuri Kach is the apparently obvious route, but would be prohibitively expensive in construction and require much tunnelling. Beyond Khajuri Kach wa Tanai and Rogha Kot to Wana, some 23 miles, offers no difficulty. The old policy of the raiders working westwards and our retributive expeditions stretching their very temporary tentacles eastwards seems to suggest better lateral communications. The broad gauge at Kohat might without undue cost be extended to Thal and thence to Idak via Spinwam. From here till further extension proved desirable, a motor road through Razmak, Makin and Dwatoi to link up with that now surveyed to Ladha sounds possible to the looker on. Eventually such communications, road, rail, or both, could continue to Wana, Fort Sandeman and Quetta na Hindu Bagh, a strategic line offering great defensive possibilities substituting Razmak, which resembles Ootacamund, and healthy uplands for the deadly fever spots now occupied. The very fact of employing the tribesmen on these works with good pay and good engineers tends to pacify the country as well as providing healthy accessible hill stations in place of the proverbially comfortless cantonments which now exist in this part of the Frontier."

A Compromise.—A full statement of the policy finally adopted by Government in view of the sutuation left upon their hands after the Mahsud rebellion was made by the Foreign Secretary, Sir (then Mr.) Denys Bray, in the course of a Budget discussion in the Legislative Assembly on 5th March 1923. He outlined neither a Forward policy nor a Close Border policy. Both these terms had, in fact, ceased to be appropriate. Circumstances had so changed that neither the one plan nor the other remained within the bounds of reasonable argument.

The Foreign Secretary explained that the ingredients of the Frontier problem at the present day are essentially three, namely, the Frontier districts, the neighbouring friendly State of Afghanistan, and the so-called Independent Territory, this last being the belt of unsettled mountain country which lies between

the borders of British Luda and India. He proceeded specially to show that this belt is, in fact, within India."...It is boundary pillars that mark off Waziristan from Afghanistan; it is boundary pillars that include Waziristan in India. We are apt to call Waziristan in India. We are apt to call Waziristan independent territory; and it is only from the point of view of our British districts that these tribes are trans-frontier tribes. From the point of view of India, from the international point of view that is, they are cis-frontier tribesmen of India, If Waziristan and her tribes are India's scourge, they are also India's responsibility—and India's alone. That is an international fact that we must never forget."

The settled policy of Government in Waziristan, Sir Denys showed, was the control of that country through a road system, of which about 140 miles would lie in Waziristan itself and one hundred miles along the border of Derajat, and the maintenance of some 4,600 Khassadars and of some 5,000 irregulars, while at Razmak, 7,000 feet high and overlooking northern Waziristan, there would be an advanced base occupied by a strong garrison of regular troops. Razmak he showed to be further from the Durand Line than the old-established posts in the Tochi. In the geographical sense, therefore, the policy was, in one signal respect, a backward policy. None the less, it was a forward policy in a very real sense, for it was a policy of constructive progress and was a big step forward on the long and laborious road towards the pacification, through civili-zation, of the most backward and inaccessible, and therefore the most truculent and aggressive tribes on the border. "Come what may civilization must be made to penetrate these admit inaccessible mountains or we must admit that there is no solution to the Waziristan problem, and we must fold our hands while it grows inevitably worse."

The policy thus initiated has proceeded with results according with the highest reasonable expectations and exceeding the most sanguine hopes of most people concerned in its formulation.

The roads are policed by the Khassadars, who The open hostility of the Waziri tribesmen to the presence of troops and other agents of Government in their midst, which at the outset they showed by shooting up individuals and small bodies of troops on every opportunity, has faded away and the prospile have shown an has faded away, and the people have shown an understanding of the rule of law, and, under the control exercised, a readiness to conform to it. In various small but significant ways, methods of civilization have caught the imagination of or contraction have caught the imagination of the people and won their approval. Thus, the safety of the roads has encouraged, and is buttressed by a considerable development of motor-bus traffic. The roads, as the King's Highway, are officially held to be sacrosenet, that is not should be sacrosened. that is no shooting up or other pursuit of personal or tribal feuds is permitted upon them. persons or tribal reugs is permitted upon them. This permits villagers to proceed to and from the plains towns in safety. Under the influence of their women, the tribesmen applied that the ban against shooting upon the highway would be extended to all the country for three miles on either side of the highway. Tentative efforts to introduce primary edu-cation proved possible and achieved as much success as could be expected. The hospitals and dispensaries maintained for irregular troops, called Scouts, employed about the country, attend to the wants of the tribespeople who come to them. So much has this arrangement been appreciated that the Mahsuds formally applied for the establishment of a hospital of their own. With grim humour, they offered to provide such an institution with the necessary surgical instruments, saying that they had saved this from the time when the British formerly left the country. In other words, they offered what they had captured or looted during the 1919 emeute.

A remarkable illustration of the acceptance by the people of the new conditions was provided a year or two ago by the Wans Wazirs when they partitioned the Political Authorities for the occupation of south Wazirstan corresponding with that already established in northern Wazirstan. A motor road had ponding with that already established in northern Waziristan. A motor road had already been run out from Jhandola through Chagmalni and the Shahur Tangi to Sarwekai. A brigade of troops, hitherto stationed at Manzai, whereabouts the Tak-i-Zam, after flowing down its deep valley from northern Waziristan, debouches on to the Derajat, was accordingly ordered up to Wana in the autumn of 1929. It proceeded throughout the journey thither without opposition and was warmly welcomed by the tribes people at Wana, where it established itself in a favourably sited camp not far from the fort which was the earlier centre of British occupation. There it happily remains. remains.

The reoccupation of Wans and the circumstances in which it took place illustrate that a policy is a live thing. In other words, it is not a programme which can reach fulfilment or completion. It lives and always waits upon some new action to give it further expression. In this respect the new policy, though it representation of the Act provided for stirring has only demonstrably been applied in Wazir wholly and fanatical Muslim province in the almost latan, must be regarded as that which governs wholly and fanatical Muslim province in the almost latan, must be regarded as that which governs wholly and fanatical Muslim province in the almost latan, must be regarded as that which governs wholly and fanatical Muslim province in the almost latan. The reoccupation of Wana and the circumstances in which it took place illustrate that a

Baluchistan and the Khyber Pass, except, possibly, the Kurram Valley.

The area cultivated by the villagers of Wana plain doubled by the end of 1931 and the people declared their readiness to surrender their firearms if their neighbours also gave up theirs or were deprived of them. A road has been built commencing Fort Sandeman via Gulkach. on the Gomal river, with Tanai, on the Sar-wekar-Wana road A motor road has also been constructed from Razmak through Kaniguram, in the heart of the Mahsud country to Wana It was completed in 1933 and the only disputes connected with its construction arose from the invalry of the tribesmen whose villages he along the route and who sometimes fought one another to secure road-making contracts.

A startling new development upon the North West Frontier during 1930 was the North West Frontier during 1930 was the spread thereto of agitation carried on by the Indian National Congress in the interior of India in pursuit of its efforts to bring political pressure to bear upon the Government of India, and above them, His Majesty's Government. The Congress at its annual session at Lahore in the congress at its annual session at Lanore in the week following Christmas, 1929, adopted a programme aiming at the separation of India from the British Empire and at the promotion of revolution in India to secure this end. In particular, it avowedly set out "to make Government impossible." Revolutionary agitation, and especially a campaign to promote disobedience of the civil law in order to bring the administration to a stand-still, commenced all over India immediately after the Congress meetings. The settled districts of the N.W. F. P. were the scene of this, in common with the rest of the land. The agitation was there carried on by Congress agents organised in what are known as Khilafat Committees. For their purpose they made special use of misrepresentations of the Sarda Act, recently passed by the Indian Legislature by the official passed by the Indian Legislature by the official and Hindu votes against the opposition of the Muslim non-official members. This measure makes illegal and provides penalties for the marriage of boys and girls below stated minimum ages. The age at which marriage may take place is also ir meneral terms laid down for Mohammedans by their religious law. Hence, the Muslims in British India, while acknowledging that the Sarda Act would not in practice affect them because its reversions. acknowledging that the Sarda Act would not in practice affect them, because its provisions in no way over-rule their religious law, nevertheless saw in the measure an act affecting the domain of their religious law, and passed, in spite of their dissent, in a Legislature in which Muslims are, by themselves, a hopeless minority. They regarded its enactment as a grave illustration of their fears that under any scheme of democratic saff-government in India Muslim democratic self-government in India, Muslim interests would not be safe against disregard by the Hindu majority.

has only denionstrably been applied in wazir-letan, must be regarded as that which governs wholly and fanatical Muslim province in the the actions of the authorities in regard, at least to the whole Frontier region lying between propaganda was carried on; it was, for instance,

alleged that under the Act all girls must be medically examined before marriage. An elaboration of this untruth was that the Government were recruiting a large body of Hindu inspectors to make the examinations. And the agitation was deliberately pushed outwards from the settled districts of the N.W. F. P. into the tribal areas. Waziristan was amongst the first of them to be inundated with the propagands. This was in March-April 1929. The poison spread outwards from Peshawar into Tirah about the same time. The agitation was sedulously carried on in the district northward of Peshawar city and from thence was pushed into Mohmand country. The first point of violent combustion was Peshawar city, where the mob murderously broke out on 23rd April 1930. Within a short time, Afridi bands descended the ravines and nullahs from Tirah to join in the fray. The Mohmands became greatly excited and sent down bands to sit near the border and watch for an opportunity to join in. The Upper Tochi Wazirs simultaneously took to arms and shortly afterwards the Mahsud Wazirs, about Ladha, did the same. At this stage, the development of the Air arm in India proved of lincalculable value. Aeroplanes patrolled the whole country and were frequently employed by the political authorities to take preventive and punitive action by bombing. The road system, meanwhile, enabled troops to be moved at will to positions of advantage for dealing with whatever serious tribal aggression appeared likely.

In the result, the Mohmands, after being bombod several times, found discretion the better part of valour and made no descent in force. The Afridis twice endeavoured to raid Beshawar in force but by combined air and land action were both times driven back to their hills with no achievement to report. The Orakzais of southern Tirah threatened to descend by the Ublan Pass upon Kohat and their western clans attacked a post in the Upper Kurram and endeavoured to attack Parachinar. Helped by the machinations of Congress agents, they succeeded in drawing two or three clans of Afghan tribesmen across the border into the fray. Combined air and ground action crushed these efforts. The Tochi Wazirs heavily attacked Datta Khel, but were speedily brought to order by force. The Mahsuds were similarly repulsed and punished when they assaulted Sorarogha, in the valley of the Tak-Jam.

All outbreaks of revolt were suppressed in the same manner and the establishment of new fortified posts on the Peshawar plain, immediately opposite the main valleys leading out of Trah, and the construction of roads for their service, now indicate the application of the new frontier policy in that region. The Afridis long refused to assent to these, but being thereby deprived of access to their normal winter graving grounds on the Khajuri and Aka Khul plain, and prevented from visiting Peshawar, their marketing centre, they came in an acceptad peace under the new conditions before the opening of the winter of 1931-32. The Afridis hate later asked for roads into Triah but are not yet sufficiently agreed among themselves about the point for construction successfully to plotted.

It will be seen that the events of the summer of 1980 put the policy to a severe test, and that its successful operation in the emergency was specially assisted by the Royal Air Force. The resultant position appears, then, to be that the control of the tribes, where the policy has already been expressed in road building and in the establishment of suitable garrisons, is effective, that the political and inilitary ground organization with which the policy is supported brings about the introduction of the ameliorative influence of civilization, and that the rapidity and success with which the Royal Air Force can operate over the hills, tends to diminish the amount of ground force necessary. On the other hand, the two descents of the Afridis upon the plain and their return to their homes without great loss, despite all that the Royal Air Force and large bodies of troops could do, indicate the capacity for mischlef which lies in the hands of the Tirah tribes, and must remain there so long as the policy is not extended over their highlands.

Mohmand Outbreak in 1933.—
Disturbances in the Mohmand country during the summer of 1933 both illustrated the operation of the modern Frontier policy and the need to keep it a live policy if it is to be of any use at all. The Mohmands may for the purposes of present description be divided into two categories namely, the Upper Mohmands, who live in the highlands of the Mohmand country, and the Lower Mohmands, whose country stretches from the lower altitudes of the same hills down to the Peshawar Plain. Through the country of the Upper Mohmands passes the Durand line but the Afghan Government have nover agreed to its delimitation in part of this region and consequently its place has long been taken over a considerable portion of the length of the Frontier by what is described as the Presumptive Frontier. The exact position of this latter has never been settled between the two governments and it is consequently sometimes difficult to say whether people from particular villages belong to one side or to the other of it.

In 1932, during the revolutionary Red Shirt campaign, in connection with the IndianNational Congress, in the Peshawar Plain, the Upper Mohmands decided to join in the disturbances and raids in the administered territory immediately northward of Peshawar. The Lower Mohmands are described as the Assured Tribes. The meaning of the description is that the British Indian authorities assure them protection against the attacks of the Upper Mohmands and they, on the other hand, are bound by promises of good behaviour. The Assured Tribes in 1932 interfered with the programme of the Upper Mohmands for raiding the plain and the Upper Mohmands for raiding the plain and the Upper Mohmands in 1933, when spring and early summer once more facilitated their methods of campaigning, commenced retributory raids upon the Halimzai and other Assured clans. The attacked clans appealed to the political authorities for help and that help they were obliged to give.

About the same time as this trouble was germmating, there appeared in Bajaur, a country immediately to the north of that in which the events just described developed, a Pretender to the Aghan throne. He was accompanied

by two companions and started a campaign territory, resembling that running through in Bajaur for a revolution or such other trouble North Waziristan. as might be possible in Afghanistan. This compelled the British Indian authorities to take measures in fulfilment of their obligations of good neighbourliness to Afghanistan.

Road construction from the Peshwar-Shabkadr road northwards through Ghalanai into the Halimzai country and towards the passes which lead from that country into the upper extremities of the Bajaur Valley was undertaken and two brigades of troops, with other details, were sent forward up it to assist in dealing with the Upper Mohmands. At the same time, aeroplanes bombarded the village of Kotkai in Upper Bajaur, which had given shelter to the Pretender, further aerial demonstrations were made and the Bajauris were given an ultimatum demanding the surrender of the Pretender by a given date

The Upper Mohmands continuing aggressive and the Bajauris obdurate, there was good prospect of a campaign over the same country as that covered by the campaign of 1897. It seemed likely that the Ghalanai Road would

In the end, the Upper Mohmands, partly doubtless because of punishment which they received in certain encounters with our troops and partly probably because of influence brought to bear upon them from Kabul, retired to their hills and after negotiations entered into bondst to keep the peace; and the Bajauris, while maintaining on grounds of tribal custom their refusal to surrender the Pretender, nevertheless expelled that person from their territory, probably into Afghanistan. Here, then, the trouble ceased The nett result of it was the construction of the road through Ghalanai and the rapid development of bus services and other activities of civilization which speedily took place along it

The Upper Mohmands made another descent in the summer of 1935. The Lower Mohmands quarrelled among themselves over the distribution of road maintenance contracts and the upper Mohmands decided to fish in the troubled waters Successful military operations ended in be continued into the upper extremity of Bajaur the Upper Mohimands sucing for peace—and and that another road for troops would also in the Ghalanai road being carried forward have to be constructed up the Bajaur valley over the Nahakki Pass and down beyond it itself so that by the meeting of the two roads on to the Main which extends to the natural in Upper Bajaur, there would become established load junction where the Upper Bajam Valley a circular road through this part of the tribal meets the Upper Mohmand country

VI.—AFGHANISTAN.

War of 1838 was fought—the most melancholy war or 1838 was rought—the most metancholy episode in Indian frontier history. It was because a Russian envoy was received at Kabul whilst the British representative was turned back at Ali Masjid that the Afghan War of 1878 was waged. After that the whole end of British policy toward Afghanistan was build up a trace independent features the later. to build up a strong independent State, friendly to Britain, which would act as a buffer against Russia, and so to order our frontier policy that we should be in a position to move large forces up, if necessary, to support the Afghans in resisting aggression.

Gates to India.

A knowledge of the trans-frontier geography of India brought home to her administrators of India prought nome to her administrators the conviction that there were only two main gates to India—through Afghanistan, the historic route to India, along which successive invasions have poured, and by way of Seistan. It was the purpose of British policy to close them, and of Russia to endeavour to keep them at any rate half open. To this end, having pushed her trans-Persian railway to Samar-kand, Russia thrust a military line from Merv to the Kushklinsky Post, where railway material is collected for its immediate prolongation to Herat. Later, she connected the trans-

The relations of Afghanistan with the Indian | Siberian railway with the tran-Caucasian Empire were for long dominated by one main consideration—the relation of Afghanistan to a Rusbian Invasion of India. All other considerations ber European magazines. Nor has Great were of secondary importance. For nearly Britain been idle. A great military station three-quarters of a century the attitude of has been created at Quetta. This is conciderated by this one factor. It was in order in the concept of Russia that the first Afghan Chapper Rift, lines which rank amongst the War of 1838 was fought—the most melancholy most picturesque and daring in the world. most picturesque and daring in the world. From Quetta the line has been carried by the Khojak tunnel through the Khwaja Amran Range, until it leads out to the Afghan Border at New Chaman, where it opens on the route to Kandahar. The material is stocked at New Chaman which would enable the line to be carried to Kandahar in sixty days. In view of the same menace the whole of Baluchistan has been brought under British control. Quetta is now one of the great strategical positions of the world, and nothing has been left undene which modern military science can achieve to add to its natural strength. In the opinion of many military authorities it firmly closes the western gate to india, either by way of Kandahar, or by the direct route through Seistan.

Further east, the Indian railway system was carried to Jamrud and by the autumn of 1925 up the Khyber Pass to Landi Kotal and down up the Khyber Pass to Landi Kotal and down the other side of the Pass to Landi Khana. A first class military road sometimes double, sometimes reble, also threads the Pass to our advanced post at Landi Kotal, and then descends until it meets the Afrhan frontier at Landi Khana. Later, a commencement was made with the Loi Shilman Railway, which starting from Peshawar was designed to penetrate the Mulla or country and provide an alternative advance to the Khyber At the same time he repeatedly pressed for the for the movement of British troops for the right to pass by the Government of India and defence of Kabul. For unexplained reasons, to establish his own representative at the Court this line was suddenly stopped and is now of St. James.

Afghanistan and the War.—These reprepared for the great conflict which was to be fought on the Kandahar-Ghazni-Kabul line.

Relations with India.

Between the advanced posts on either side stands the Kingdom of Afghanistan. The end of British policy has been to make it strong and friendly. In the first particular it nas early and largely succeeded. The second aim may now also be said to have been attained When the late Abdurrahaman was invited to ascend the throne, as the only means of escape from the tangle of 1879, none realised his great qualities. Previously the Amir of Afghanistan had been the chief of a confederacy of clans. Abdurrahaman made himself master in his own kingdom. By means into which it is not well closely to enter; he beat down opposition until none dared lift a hand against him. Aided by a British sub-sidy of twelve lakhs of rupees a year increased to eighteen by the Durand Agreement of 1893, and subsequently to over 20 lakhs, he estab-lished a strong standing army and set up arsenals under foreign supervision to furnish it with arms and ammunition. Step by step his position was regularised. The Anglo-Russian Boundary Commission,—which nearly precipitated war over the Penjdeh episode in 1885,-determined the northern boundaries. The Pamirs Agreement delimited the borders amid those snowy heights. The Durand Agreement settled the border on the British side, except for a small section to the west of the Khyber, which remained a fruitful source of trouble between Afghanistan and ourselves until 1919, when the Afghan claims and action upon the undemarcated section led to war.
That section was inally surveyed and the
frontler determined shortly after the conclusion of peace with Afghanistan. Finally the McMahon award closed the old feud with Persia over the distribution of the waters of the Helmand in Scistan. It was estimated by competent authorities that about the time of Abdurrahaman's death, Afghanistan was in a position to place in the adding the event of war, one hundred thousand well-armed regular and irregular troops, together with two hundred thousand tribal levies, and to leave fifty thousand regulars and irre-gulars and a hundred thousand levies to maintain order in Kabul and the provinces. But if Afghanistan were made strong, it was not made friendly. Abdurrahaman Khan distrusted British policy up to the day of his death. All that can be said is that he dis-trusted it less than he distrusted Russia, and if the occasion had arisen for him to make a choice, he would have opposed a Russian advance with all the force at his disposal. He closed his country absolutely against all foreigners, except those who were necessary for the supervision of his arsenals and factories He refused to accept a British Resident, on the ground that he could not protect him, and communicated his accession to the Government British affairs were entrusted to an Indian of India and proclaimed his desire to adhere to

Afghanistan and the War.—These re-iations were markedly improved during the reign of His Majesty the Amir Habibullah Khan. It used to be one of the trite sayings of the Frontier that the system which Abdurrah-man Khan had built up would perish with him, for none was capable of maintaining it. Habibuliah Khan more than maintained it. He visited India soon after his accession and acresources of the Empire. He strengthened and consolidated his authority in Afghanistan itself. At the outset of the war he made a declaration of his complete neutrality. It is believed—a considerable reticence is preserved over our relations with Afghanistan—that he warned the Government of India that he might be forced into many equivocal acts, but that they must trust him; certainly his reception of Turkish, Austrian and German "missions" at Kabul, at a time when British representatives were severely excluded, was open to grave misconstruction. But a fuller knowledge induced the belief that the Amir was in a position of no little difficulty. He had to compromise with the fanatical and anti-British elements amongst his own people, infiamed by the Turkish preaching of a jehad, or holy Islamic war. But he committed no act of hostlity; as soon as it was safe to do so he turned the members of these missions out of the kingdom. At the end of the war his policy was completely justified; he had kept Afghanistan out of the war, he had adhered to the winning side; his authority in the kingdom and in Central Asia was at its zenith.

Murder of the Amir.-It is believed that if he had lived Habibullah Khan would have used this authority for a progressive policy In Afghanistan, by opening up communications and extending his engagements with India. He was courted by the representatives of Persia and the Central Asian States as the possible rallying centre of a Central Asian Islamic confederation. At this moment he was assassinated on the 20th February 1919. The circumstances surrounding his murder have never been fully explained; but there is strong ground for the belief that it was promoted by the reactionaries who had harassed him all his reign. These realised that with his vindication by the war their time of reckoning had come; they anticipated it by suborning one of his aides to murder him in his sleep. His brother, Nasrullah Khan, the nominee of the fanatical element, was proclaimed Amir at Jelalabad in his stead, but public opinion in Afrhanistan revolted at the idea of the brother seizing power over the corpse of the murdered man. His sons, Hayat and Amanullah, were not disposed to waive their heritage. Amanullah was at Kabul, controlling the treasury and the arsenal and supported by the Army. Nasrullah found it impossible to make head against him and withdrew. The new Amir, Amanullah, at once communicated his accession to the Government the traditional policy of friendship. But his difficulties at once commenced : he had to deal with the war party in Afghanistan; he was confronted with the dissatisfaction arising from the manner in which the murderers of Habibuliah had been dealt with the fanatical element was exasperated by the imprisonment of Nasruliah; and the Army was so incensed that it had to be removed from Kabul and given occupa-tion to divert its thoughts. A further element of complexity was introduced by the political situation in India. The agitation against the Rowlatt Act was at its height. The disturbances in the Punjab and Gujarat had taken bances in the Punjab and Gujarat had taken place. Afknan agents in India, of whom the most prominent was Ghuiam Hyder Khan the Afghan postmaster at Peshawar, flooded Afghanistan with exaggerated accounts of the Indian unrest. The result of all this was to convince the Amir that the real solution of his difficulties was to unite all the disturbing elements in a war with India. On the 25th April his tracers were set in motion and simulations. April his troops were set in motion and simultaneously a stream of anti-British propaganda commenced to flow from Kabul and open intrigue was started with the Frontier tribes.
on whom the Afghans placed their chief

Speedy Defeat.—The war caught the Army in India in the throes of demobilisation and with a large proportion of the seasoned troops on service abroad. Nevertheless the regular Afghan Army was rapidly dealt with. Strong British forces moved up the Khyber and seized Dacca. Jelalabad was repeatedly bombed from the air and also Kabul. Nothing but a shortage of mechanical transport Nothing but a shortage or memianical transport prevented the British forces from seizing Jelalabad. In ten days the Afghans were severely defeated. On the 14th May they asked for an Armistice. With the usual Afghan spirit of haggling, they tried to water down the conditions of the spirit but at the water and the spirit of the spirit but at the water to with tions of the armistice, but as they were met with an uncompromising emphasis of the situation they despatched representatives to a conference at Rawalpindi on the 26th July. On the 8th August a Treaty of Peace was signed which is set out in the Indian Year Book, 1923, pp. 196-197.

Post-War Relations -It will be seen that under this Treaty the way was paved for a fresh engagement six months afterwards During the hot weather of 1920 there were prolonged discussions at Mussoorie between Afghan Re-presentatives and British officials under Sir Henry Dobbs. These were private, but it is believed that a complete agreement was reached. Certainly after an interchange of Notes which revealed no major point of difference it was agreed that a British Mission should proceed to Kabul to arrange a definite treaty of peace. This Mission crossed the Border in January 1921 and entered Kabul where a peace treaty was

The main points of the Treaty are set out in the Indian Year Book, 1923, pp. 197, 198-199.

Afghanistan after the War.—Since the War the relations between Afghanistan and Great Britain have been good and improving. There were painful episodes in 1923 when a murder gang from the tribal territory in the ing vipers in his bosom. Towards the end of

British side of the Frontier committed raids in British India, murdering English people and kidnapping English women and then took refuge in Afghanistan. In course of time this gang was broken up. His Majesty the King of Afghani-stan had troubles within his own borders which have made him glad of British help. The main object of his government was to strengthen the resources of the country and to bring it into closer relation with modern methods of administration. But Afghanistan is an intensely conservative country and no is an intensely conservative country and no changes are popular; especially violent was the opposition to a secular form of administration and education. The direct result was a formidable rebellion of Mangals and Zadrans in the Southern Provinces, and serious reverses to the regular troops sent against the rebels. At one time the position was serious, but the rebels were not sufficiently united to develop their successes, and with the aid of seronlapse and other againstance afforded by aeroplanes and other assistance afforded by the Government of India the insurrection was broken. Whilst this assistance was appreciated, the whole business gave a serious set-back to the reforms initiated by His Majesty; he had to withdraw almost the whole of his administrative code and to revert to the Mahomedan Law which was previously in force,

Bolshevik Penetration.—Taking a long view, a much more serious development of the policies of Afghanistan, at the period to which poncies of Arganastan, at the period to which the foregoing notes apply was the penetration of the Bolsheviks. These astute propagandists have converted the former Trans-Casplan States of Tsarist Russia into Soviet Republics, where the rule of the Bolsheviks is much more drastic and disruptive than was that of what drastic and disruptive than was that of what was called the despotism of the Romanoffs. The object of this policy is gradually to sweep into the Soviet system the outlying provinces of Persia, of China and of Afghanistan. In Persia this policy was folled by the vigour of the Sipar Salah, Reza Khan, since declared Shah. In Chinese Turkestan it is pursued with qualified success. In Afghanistan it also made certain progress. The first step of the Bolsheviks was to extend the Soviet Republics of Traitician Michael and the Soviet Republics of Traitician Michael and the Soviet Republics of Tajikistan, Uzbekia and Turkmanistan so as to absorb all Northern Afghanistan. This was later, apparently, abandoned for the moment for a more gentle penetration. Large subsidies, mostly delivered in kind, were given to Afghanistan. Telegraph lines were erected all over the country; roads were constructed, large quantities of arms and ammunition were supplied, whilst an air force with Russian pilots and mechanics was created and was largely developed. In return the Bolsheviks received important trading facilities. The whole purpose of this policy was ultimately to make it possible to attack Great Britain in India through an absorbed Afghanistan.

It is very doubtful if the Amir and his advisers were deceived by these practices, and whether they did not pursue the simple plan of taking all they could get without the slightest intertion of handing themselves over to the Bolsheviks. But it is easier to let the Bolshevik in than to get him out; friends of the Afghans were asking themselves whether the Amir was not nourish1925 and in the early part of 1926 there was a rule awakening. The Northern Frontier of the country has always been unsettled because of the shifting courses of the Oxus. In December Bolshevik forces captured with violence the Afghan post of Darkabad, killing one soldier. These events aroused great indignation at Kabui and were denounced by the Amir coram publico. There is no little evidence to show that though the form of government has changed in Russia the aims of Russian policy are the same. It will be valid for three recountry has always been unsettled because of the will remain in force would cease after that time. On March 23rd there was treaty between Germany which amounted to no more than the country has a lit will be valid for three recountry has always been unsettled because of the particular to the particular to would cease after that time. On March 23rd there was treaty between Germany which amounted to no more than the particular than the country has always been unsettled because of the particular to the part would be the attitude of Petrograd towards the extension of the Orenberg-Tashkent railway to Termes. That line has been constructed by adjacements under the European capitals. The various subthe Bolsheviks. The Afghans have had their carried into agreements under the Treaty have been carried into agreements.

action between one of the contracting parties and a third power or powers, the other con-tracting party will observe neutrality in respect of the first contracting party.

Clause 2 -Both the contracting Clause 2—Both the contracting parties agree to abstain from mutual aggression, the one against the other. Within their own dominions also they will do nothing which may cause political or military harm to the other party. The contracting parties particularly agree not to make alliances or political and military agreements with any one or more other powers against each other. Each will define the contracting parties and Persia. A series of treaties with the governments of the countries visited was announced and the King returned to Kabul in the late summer of 1928, the tour having been unclouded by untoward incident. Afghanistan was peaceful during his long absence.

Reforming Zeal.—King Amanullah returned this realm as full of reforming zeal. He was also abstain from joining any boycout or financial much impressed by the political and social also abstain from joining any boycott or financial also abstain from joining any boycott or financial or economic blockade organized against the other pary. Besides this in case the attitude of a third power or powers is hostile towards one of the contracting parties, the other contracting party will not help such hostile policy, and, further, will prohibit the execution of such policy and hostile actions and measures within its dominions.

Clause 3.—The high contracting parties acknowledge one another's Government as rightful and independent. They agree to abstantion all sorts of armed or unarmed interference. decidedly neither join nor help any one or more other powers which interfere in or against one of the contracting Government. None of the contracting parties will permit in its dominions the formation or existence of societies and the activities of individuals whose object is to gather armed force with a view to injuring the other's independence, or otherwise such activities will be checked. Similarly, neither of the con-tracting parties will allow armed forces, arms, ammunition, or other war material, meant to be used against the other contracting party

It will be valid for three years. After this period it will remain in force for another year provided neither of the parties has given notice six months before the date of its expiry that it

On March 23rd there was also signed in Berlin a treaty between Germany and Afghanistan which amounted to no more than the establish-

Russo-Afghan Treaty.—Outwardly the relations between the two States are friendly. In December 1926 the Afghan papers published the text of a new treaty concluded with Soute Russia, which was signed on August 31st, but it provided that it should in no way interfere with the secret treaty signed in Moscow on assassinated in 1919. King Amanulla, accompanied by the Queen and a staff of officials, commenced to the text of a new treaty concluded with Soute a long tour to India and Europe. It is understood that it should in no way interfere took of his father. King Habibullah, who was with the secret treaty signed in Moscow on assassinated in 1919. King Amanulla, accompanied by the Queen and a staff of officials, commenced to long tour to India and Europe. It is understood that his was one of the cherished ambitions of his father. King Habibullah, when was warmly welcomed in India this treaty, as disclosed in the Afghan papers, and the second treaty of the India and Europe. It is understood to the communities of his father. King Habibullah, when was one of the cherished ambitions of his father, King Habibullah, when was warmly welcomed in India this treaty, as disclosed in the Afghan papers published by the Queen and a staff of officials, commenced to long tour to India and Europe. It is understood that his was one of the cherished ambitions of his father, King Habibullah, when was warmly welcomed in India this treaty, as disclosed in the Afghan papers published by the Queen and a staff of officials, commenced to long tour to India and Europe. It is understood that his was one of the cherished ambiof other communities, who forgot the invasion of India in 1919. He then took ship to Europe, He was the guest of His Majesty King George V in London, and visited the principal European capitals. He made a State visit to Turkey, and returned to Afghanistan by way of Soviet Russia

much impressed by the political and social institutions of the western lands he visited, and in particular by the dramatic forcefulness with which Mustapha Kemal Pash had driven Turkey along the path of "reform," or perhaps it would be more correct to say westernisation. In this he was encouraged by the Queen, who was desirous of seeing the women of Afghanistan enjoy some of the freedom and opportunity won by and for the women of the West. Edict after edict was issued, changing the whole structure of rightful and independent. They agree to abstant Afghan society. New codes and taxes were from all sorts of armed or unarmed interference: imposed: it was proposed that women should in one another's internal affairs. They will emerge from their seclusion and doff the vell; decidedly neither join nor help any one or more the co-education of boys and girls was prescribed; in September Government officials were forbidden to practise polygamy; in October European dress was ordered for the people of Kabul. At the same time, the pay of the regular troops fell into arrear.

With every appreciation of the spirit and direction of these changes, friends of His Majes-ty advised the King to moderate the pace. They reminded him that in 1924 far less drastic ammunition, or other war material, meant to be used against the other contracting party to pass through its dominions.

Clause 6—This treaty will take effect from the date of its ratification, which should take place within three months of its signature. hostility to them. Possibly also well-wishers suggested that what was possible in Turkey, after centuries of close contact with the West, and where the ground had been prepared by missionary effort and a long struggle for the emancipation of women, might be less easy in Afghanistan, where there had been no contact with the western world.

A change of Kings .- Events moved rapidly in 1929. A notorious north Afghan budmash, Bacha-i-Saqqao, raised the standard of revolt and inflicted severe losses on the Afghan Regular troops, discontented as they were by arrears of pay. Day by day the Afghan represent-atives in various parts of the world issued messages asserting that the rebels had been destroyed, and a rapid series of pronouncements declared the withdrawal of all the reforms and deciared the winddrawal of all the reforms and the establishment of a Council of Provincial Representatives. Communications with the outer world were broken. King Amanulla and his family fied from Kabul to Kandahar, and then from Kandahar va Quetta to Bombay where they took ship to Europe. King Amanulla on his arrival at Rome entered into possession of the Afghan Legation, where he remained of the Afghan Legation, where he remained.

Bacha-i-Saqqao declared himself King of Afghanistan, and for a few months held his position in Kabul. Without money, position in Kabul. Without money, administrative experience or a disciplined was harassed by constant attacks. The Royal Air Force in India meanwhile went to the rescue of the British Nationals beleaguered in and around Kabul and in a series of brilliant flights evacuated all without the slightest hitch. The most formidable of the new king's adversaries were led by General Nadir Khan, a scion saries were led by General Nadir Khan, a scion of the old ruling house, with a wide knowledge of the world. Heavy fighting took place Fortunes varied. Nadir Khan almost gave up his chances as finally lost. But a band of Wazirs from the British side of the border attracted by prospects of loot, joined Nadir and finally seized Kabul in his name and interest. Nadir Khan thus became victor and shortly afterwards, at the wish of the Afrhans. shortly afterwards, at the wish of the Afghans, Bacha-Saqqao was executed with other rebels, and when the year closed Nadir Khan was to all seeming in firm possession of the Kingdom. He despatched members or his family to the principal Afghan Legations in Europe. A Shinwari rising near the exit from the Kingdom Pass took place in February 1930 and was represent with uncruested success 1930, and was repressed with unexpected success and vigour. There followed a serious rebellion

Kohidaman. Bacha-i-Saqqao's in Kohidaman. Bacha-i-Saqqao's country. This also was promptly quelled. And thereafter Nadır Shah ruled without challenge. He devoted himself to the reorganisation of his Army. England was strictly neutral during the successive stages of the revolution, but promised support to Afghanistan to help her maintain internal peace when she had restored it and this promise was fulfilled by the revolution of an internal peace when she had provision of an interest free loan of [200,000 to King Nadir and by the supply of rifles and ammunition to him. He gave evidence of his friendliness towards Britain and India. He co-operated effectively to prevent tribes on his side of the Frontier joining those on the British side against the Government of India in response to the Congress agitation in the summer of 1930. The trade routes were re-opened and the new King again took up Amanullah's mantle of reform but in a statesmanlike manner which carried the Mullah's along with him.

Murder of Nadir Shah —This ordered march of progress was traggeally interrupted by the murder of Alis Majesty Nadir Shah on the afternoon of 8 November 1933. His Majesty was attending a football tournament prize giving, when a young man among the gathering stepped forward and incd several revolver shots into him at close range, killing him instantly. It later appeared that the assassin committed the crime in revenge for the execution of a prominent Afghan who had been caught deeply involved in treasonable activities after he had been mercifully treated for eather behaviour of the same kind The assassin's father was stated to have been this man's servant. The minder was not followed by general or widespread The members of Nadn Shah's family disorder and his prominent officers of State stood loyally by his hen, his son, Muhammed Zahir. The latter was duly placed on his father's throne and has accession was in due course acknowledged and confirmed throughout the kingdom in the traditional manner. The new king started his reign with a high reputation for courage and steadiness. He early issued assurances to his people that he would continue the policy of his tather in affairs of State. No untoward events have occurred in the years that have since past and during them the new young King has by his signetts and good Government gradually strengthened his position on the throne

VII. - TIBET.

with that country were not, of course, inspired by this apprehension. When in 1774 Warren Hastings despatched Bogie on a mission to the Tashi-Lama of Shigatse,—the spiritual equal

Recent British policy in Tibet is really another; Warren Hastings' departure from India the phase in the long-drawn-out duel between Great subject slept, and the last Englishman to visit Britain and Russia in Central Asia. The Lhasa, until the Younghusband Expedition earliest efforts to establish communication of 1904, was the unofficial Manning. In 1885, under the inspiration of Colman Macaulay, of the Bengal Civil Service, a further attempt was made to get into touch with the Tibetans, but it was abandoned in deference to the oppoif not superior, of the Dalai Lama of Lhasa—sition of the Chinese, whose suzeralnty over his desire was to establish facilities for trade, to open up friendly relations with a Power until the war with Japan, British statesmen which was giving us trouble on the frontier, were inclined to pay excessive deference. But and gradually to pave the way to a good until the position on the Tibetan frontier continued derstanding between the two countries. After to be most unsatisfactory. The Tibetans

were aggressive and obstructive, and with a was therefore decided that the mission should view to putting an end to an intolerable situaview to putting an end to an interrable studition, a Convention was negotiated between Great Britain and China in 1890. This laid down the boundary between Sikhim and Tibet, it admitted a British protectorate over Sikkim, and paved the way for arrangements for the conduct of trade across the Sikkim-Tibet. conduct of trade across the Sikkan-Hoet frontlers. These supplementary arrangements provided for the opening of a trade mart at Yatung, on the Tibetan side of the frontier, to which British subjects should have the right of free access, and where there should be no restrictions on trade. The agreement proved useless in practice, because the Tibetans refused to recognise it, and despite their established suzerainty, the Chinese Government were unable to secure respect for it.

Russian Intervention.

This was the position when in 1899 Lord Curzon, Viceroy of India, endeavoured to get mto direct touch with the Tibetan authorities. Three letters which he addressed to the Dalar Lama were returned unopened, at a time when the Dalai Lama was in direct intercourse with the Tsar of Russia. His emissary was a Siberian Dorlieff, who had established a re-markable ascendancy in the counsels of the Dolai Lama. After a few years' residence at Lhasa Doriteff went to Russia on a confidential Lhasa Dorjieff went to Russia on a condicental agreed nether to annex Tibetan territory, nor mission in 1899. At the end of 1900 he reston the Russia as the head of a Tibetan mission of which the head was officially described in Russia as "the senior Tsanite Khoinba attached to the Dalai Lama of Tibet." This Ritian was empowered to lay down telegraph mission arrived at Odessa in October 1900, mission arrived at Odessa in October 1900, lines to connect the trade stations with India, and was received in audience by the Tsar at Livadia. Dorjieff returned to Lhasa to report years and in 1901 was at St. Petersburg of 1893, remained in force. The Chinese Government is the Russian force to which several Intelligence Officers were attached. At the time it was runoured that Dorpieff had, on behalf of the Dalai Lama, concluded a treaty with Russia, which virtually placed Tibet under the property of the Russia. This rumour was afterwards officially contradicted by the Russian Government.

The sequel to the Anglo-Russian Agreement was dramatic, although it ought not to have been mexpected. On the approach of the Worther Wounghusband Mission the Dalai Lama fied Government.

proposed in 1903, to despatch a mission, with armed escort, to Lhasa to discuss the outstanding questions with the Thetan authorates on the spot. To this the Home Government to a joint investing at Khamba Jong, on the Thetan side of the frontier. Sir Francis Younghusband of the British representative, but after months of delay it was ascertained that the Thetans in the Initish representative, but after months of the linitish representative, but after months and in intention of committing themselves. Acting Viceroy in the neighbouring province of the was therefore agreed that the mission, with a strong escort, should move to Gyantse. On the way the Tibetans developed marked hostitude, and there was fighting at Tuna, and several treating the people with great severity. Meansharp encounters in and around Gyantse. It time the Dalai Lama, finding his presence a

was therefore decided that the mission should advance to Lhasa, and on August 3rd, 1904, Lhasa was reached. There Sir Francis Younghusband negotiated a convention by which the Thetans agreed to respect the Chinese Convention of 1890; to open trade marts at Gyantse, Gartok and Yatung: to pay an indemnity of £500,000 (seventy-five lakhs of rupees); the British to remain in occupation of the Chumbi Valley until this indemnity was paid off at the rate of a lakh of rupees a year. In a separate instrument the Tibetans year. In a separate instrument the Tibetans agreed that the British Trace Agent at Gyantse should have the right to proceed to Lhasa to discuss commercial questions, if necessary.

Home Government intervenes.

For reasons which were not apparent at the time, but which have since been made clearer, the Home Government were unable to accept the full terms of this agreement. The indemnity was reduced from seventy-five lakhs of rupees to twenty-five lakhs, to be paid off in three years, and the occupation of the Chumbi Valley was reduced to that period. The right to despatch the British Trade Agent to Lhasa to despatch the British Trade Agent to Linsa was withdrawn. Two years later (June 1906) a Convention was concluded between Great Britain and China regulating the position in Tibet. Under this Convention Great Britain agreed neither to annex Tibetan territory, nor

The Expedition of 1904.

In view of these conditions the Government.

The Expedition of 1904.

In view of these conditions the Government of Tibet in confusion, and one of Sir Francis Younghusband's great difficulties was to find of India, treating the idea of Chinese suze- Tibetan officials who would undertake the runty over Tibet as a constitutional fiction, responsibility of signing the Treaty. Now the proposed in 1903, to despatch a mission, with suzerainty of China over Tibet had been ex-

Urgs, the seat of another Buddhist Pontiff, | ment subsequently accepted the principle that irksome, had taken refuge in Si-ning. Thence he proceeded to Peking, where he arrived in 1908, was received by the Court, and despatched rough, was received by the Court, and despatched to resume his duties at Lhasa. Moving by leisured stages, he arrived there at Christmas, 1909. But it was soon apparent that the ideas of the Dalai Lama and of the Chinese Government had little in common. The Dalai Lama expected to resume the temporal and spiritual expected to resume the temporal and spiritual despotism which he had exercised prior to 1904. The Chinese intended to deprive him of all temporal power and preserve him as a spiritual pope. The Tibetans had already been exacperated by the pressure of the Chinese soldlery. The report that a strong Chinese force was moving on Lhasa so alarmed the Dalai Lama that he fied from Lhasa, and by the irony of fate sought a refuge in India. He was cheed to the trenter by Chinese troops. was chased to the frontier by Chinese troops, and took up his abode in Darjeeling, whilst Chinese troops overran Tibet.

Later Stages.

The British Government, acting on the reresentations of the Government of India, made strong protests to China against this action. They pointed out that Great Britain, while disclaiming any desire to interfere with the internal administration of Tibot, could not be indifferent to disturbances in the peace of a country which was a neighbour, cn intimate terms with other neighbouring States on our frontier, especially with Nepal, and pressed that an effective Tibetan Government be maintained. The attitude of the Chinese Government was that no more troops had been sent to Thet than were necessary for the preservation of order, that China had no intention of converting Thet into a province, but that being or order, that pend control with the pend responsible for the good conduct of Tibet, she must be in a position to see that her wishes were respected by the Tibetans. Finally, the Chinese remarked that the Daial Lama was such an impossible person that they had been compelled again to depose him. Here the compelled again to depose him. Here the matter might have rested, but for the revolu-tion in China. That revolution broke out in Szechuen, and one of the first victims was Chao Erh-feng Cut off frem all support from China, surrounded by a hostile and inturfated populace, the Chinese troops in Tibet were in a hopeless case; they surrendered, and sought escape not through China, but through India, by way of Darjeeling and Calcutta. The Dalai Lama returned to Lhasa, and in 1913. In the House of Lords on July 28, Lord Morley stated the policy of the British Government in relation to these changes. He said the declaration of the President of the Chinese deciaration of the President of the Chinese Republic saying that Tibet came within the sphere of Chinese internal administration; and that Tibet was to be regarded as on an equal footing with other provinces of China, was met by a very vigorous protest from the British Government. The Chinese Govern-

China is to have no right of active intervention in the internal administration of Tibet, and agreed to the constitution of a conference to discuss the relation of the three countries. This Convention met at Simla when Sir Henry McMahon, Foreign Secretary to the Government of India; Mr. Ivan Chen, representing China; and Mr. Long Chen Shatra, Prime Minister to the Dalai Lama, threshed out these issues. Whilst no official pronouncement has been made on the subject, it is understood that a Convention was initialled in June which recognised the complete autonomy of Tibet proper, with the right of China to maintain a Resident at Lhasa with a suitable guard. semi-autonomous zone was to be constituted in Eastern Tibet, in which the Chinese position was to be relatively much stronger. But this was to be relatively much stronger. But this Convention, it is understood, has not been ratified by the Chinese Government, owing to the difficulty of defining Outer and Inner Tibet, and in 1918 Tibet took the offensive and threw off the last vestiges of Chinese suzcrainty. When the Chinese province of Szechuan went over to the South, the Central Government at Pekin was unable to finance the fronter forces or to withstand the Tibetan adverses which were directed from the Land. the frontier forces or to withstand the Tibetan advance, which was directed from Lhasa and appeared to be ably managed. After the Tibetan army had occupied some towns on the confines of the Szechuan marshes, hostilities were suspended and an armistice was concluded.

From what has gone before, it will be seen that the importance which formerly attached to the political condition of Tibet was much less a local than an external question, and was influenced by our relations with Russia and China rather than with our relations with Tibet. Russia having relapsed into a state of considerable confusion, and China having relapsed into a state of absolute conjusion, these external forces temporarily at any rate disappeared, and Tibet no longer loomed on the Indian political horizon. The veil was drawn afresh over Lhasa, and affairs in that country pursued an isolated course, with this considerable difference The Dalai Lama was now on terms of the greatest cordiality with the Government of India In cordiality with the Government of India in 1920 he requested that a British officer should be sent to discuss with him the position in Central Asia brought about by the Revolution in Russia and the collapse of Government in China, and Mr. Bell, C.M.G., 108, Political Officerin Sikkim, was deputed for this purpose In 1922 telephonic communication between Lhasa and India was established. The Chinese have lately to increase their hold on Tibet but without persuading the Tibetans to accept

VIII.—THE NORTH-EASTERN FRONTIER.

The position on the northern frontier has Sikkim and Bhutan. From Chitral to Gilgit been considered as if the British line were contiguous with that of Tibet. This is not so, Government, to Assam, with the exception The real frontier States are Kashmir, Nepal, of the small wedge between Kashmir and Nepal,

(q.v.); it is almost the only important Pative State in India with frontier responsibilities, and it worthily discharges them through the agency of its efficient Indian State troops—four regiments of infantry and two Mountain Batteries, composed mainly of the Rajput Dogras, Dhiral who comes from the Sesodia Rajput clan, the bluest blood in India, takes no part in the administration. All power vests in the Prime Minister, who occupies a place equivalent to that of the Mayors of the Palace, or the Shoguns of Japan. The present Prime Minister, Sir Chandra Shamsher, has visited England, and has given conspicuous evidence of his attachment to the British Government. Nepal is the main Indian outpost against Tibet or sgainst Chinese aggression through Tibet. The frittann between the Chinese and tha Nepalese Commissioners with a Neutral President proceedings of Khatmandu-one of the most renarged to the fronter rgion in November 1935, and the firm rule of the present Prime Asis. Under the firm rule of the present Prime Minister Nepal has been largely free from Internal disturbance, and has been raised to a April, 1935, that the Commission would be strong bulwark of India. Nepal is the recruiting ground for the Gurkha Infantry, who ground for the Gurkha Infantry, who are the smaller States of Bhutan and Sikkim, whose rulers are Mongolian by extraction and Buddhists by religion. In view of the Shan States with a splential prima are the States of Bhutan and Sikkim, whose rulers are Mongolian by extraction and Buddhists by religion. In view of the Shan States with a state of Burma are the Shan States with a state of Burma and Sikhim, whose rulers are stated to a state of Burma and Sikhim, whose rulers are stated to a state of Burma and Sikhim, whose with Bhutan by increasing their subsidy from fifty thousand to a lakh of rupees a year, and guidance of Superintendents and Assistant taking a guarantee that Bhutan would be Superintendents. The Northern Shan Rail-guided by them in its foreign relations. After-way to Lashic, opened in 1903, was meant to wards China was officially notified that Great Britain would protect the rights and interests link with China, but this idea has been put of these States. At the request of the Nepalese aside, for it is seen that there can never be a Government a British railway expert was trade which would justify the heavy expendented to wast the contraval of the Scatters and the state of the Scatters of the States. Government a British railway expert was deputed to visit the country and advise on the best means of improving communications with India, As the result of his report the Nepalese Government have decided to construct a light railway from Bhichlakhorl to Raxaul. Great success has attended the orders passed by the Nepalese Government abolishing slavery.

Assam and Burma.
We then come to the Assam border tribesthe Dafias, the Miris, the Abors and the Mishmis.

where the British district of kumaon is thrust to the Dihang valley of the Abor country on the where the district of Kumson is thrist to the Dihang valley of the Abor country on the right up to the confines of Tibet, for a distance of N. E. frouter. A force of 2,500 and about 400 of nearly fifteen hundred miles there is a narrow military police was employed from October strip of native territory between British India 1911 to April 1912 in subduing the tribe. After and the true frontier. The first of these from the two or three small actions the murderers were the states is Kashmir. The characteristics of delivered up. The cost of the expedition was this State are considered under Indian States Rs. 21,60,000. At the same time friendly delivered up. The cost of the expedition was Rs. 21,60,000. At the same time friendly missions were sent to the Mishmi and Miri countries. Close contact with these forest-clad and leech-infested hills has not encouraged any desire to establish more intimate relations with them. The area occupied by the Nagasares runs orthwards from Manipur. The Nagasares tories, composed mainly of the Rajput Dogras, runs northwards from Manipur. The Nagasarcs, who make excellent fighting material. One a Tibeto-Burman people, devoted to the pracof the most important trade routes with Tibet passes through Kashmir—that through Ladak. It prosecuted by the independent tribes. The Then we come to the long narrow strip of Nepal Chin Hills is a tract or mountainous country this Gurkha State stands in special relation with the British Government. It is for all practical purposes independent, and the British resident at Khatmandu exercises no influence on the internal administration. The governing districts of Burma. Over the greater part of machine in Nepal is also peculiar. The Maharaj Dhiral who comes from the Sesodia Rajput clan, direct administrative control is at present this area, a labyrinth of fills in the north, no direct administrative control is at present exercised. It is peopled by the Shans and the Kachins. Civilisation is said to be progressing and steps have been taken to prevent encroachments from the Chinese side. Negotiations between Britain and China on this subject were long in progress, particularly with a view to the frontier between Britian and the Chinese may have to the Chinese province of Yunnan, where the absence of a defined boundary makes the maintenance of the peace difficult. A Delimitafriction between the Chinese and the Nepalete from Commission, consisting of British and Chinese used to be frequent, and in the eighteenth cen-Commissioners with a Neutral President proceed-

traction and Buddhists by religion. In view of the Shan States, with an area of fifty thousand Chinese aggressions in Tibet, the Government square rules and a population of 1,300,000 of India in 1910 strengthened their relations These States are still administered by the with Bhutan by increasing their subsidy from Sawbwas or hereditary chiefs, subject to the diture. The Southern Shan States are being developed by rallway connection. The five Karenni States lie on the frontier south of the Shan States. South of Karenni the frontier runs between Stam and the Tenasserim Division of Burma. The relations between the Inclan Government and the progressive kingdem of Siam are excellent. A notable humanitarian development of recent years is the success of the measures to abolish slavery in the Hukawng Valley. In this remote place in the north-east Excepting the Abors none of these titles has recently given trouble. The murder of Mr of Burma a mild system of slavery existed, but williamson and Dr. Gregorson by the Minyong in response to the initiative and pressure of the state of the Abors in 1911 made necessary an expedition British officers they were all fixed by April 1926.

NEPAL.

The small hilly independent Kingdom of Nepal is a narrow tract of country extending for about 520 miles along the southern slope of the central axis of the Himalayas. It has an area of about 56,000 square inles, with a population of about 5,580,000, chiefly Hindus. The greater part of the country is mountainous, the lower slopes being cultivated. Above these is a rugged broken wall of rock leading up to the chain of snow-elad peaks which culminate in Mount Everest (29 002 feet) and others of slightly less altitude. The country before the Gurkha occupation was split up into several small kingdoms under Newar kings-The Gurkhas under Prithyl Narayan Shah overran and conquered the different kingdoms of Patan, Kathmandu, and Bhatgaon, and other places during the latter half of the 18th century and since then have been rulers of the whole of Nepal. In 1846 the head of the Rana family Maharaja Jung Bahadur Rana, obtained from the sovereign the perpetual right to the office of Prime Minister of Nepal, and the right is still enjoyed by the descendants of the Rana family. In 1850 Jung Bahadur paid a visit to England and was thus the first Hindu Chief to leave India and to become acquainted with the power and resources of the British nation. The rolations of Nepal with the Government of ludia are regulated by the treaty of 1816 and subsequent agreements by which a representative of the British Government is received at Kathmandu. By virtue of the same Treaty either Government maintained representative at the Court of the other and her treaty relations with Tibet allow her to keep a Resident at thas of her own. Her relation with China is of a filendly nature Ever since the conclusion of the treaty of 1816 the friendly relations with the British Government have steadily been maintained. During the rule of the late Prime Minister it has been at its height as is evidenced by the valuable friendly help in men and money which has been given and which was appreciatively mentioned in both the Houses of Parliament and by Mr Asquith in his Guildhall speech in 1915. The message from His Majesty the King-Emperor to the Nepalese Prime Mulister sent on the termination of hostilities and published at the time as also Viceroy's valedictory address to the Nepalese contingent on the eve of their return home after having laudably fulfilled their mission in India eloquently and gratefully acknowledged the valuable help rendered by Nepal during the four and a half years of war. In recognition of this help Nepal receives an inconditional annual present of rupees ten lakhs from the British Government to be paid in perpetuity. To further strengthen and cement the bonds of friendship that have subsisted so long between the two countries, a new Treaty of friendship was concluded between the Government of Nepal and Great Britain on the 21st December 1923.

From the foregoing account of the history of Nepal it will be seen that the Government of the country has generally been in the hands of the Minister of the day. Since the time of Jung Bahadur this system of government has been clearly laid down and defined. The soverein, or Maharajadhiraja, as he is called, is but a

dignified figure-head, whose position can best be likened to that of the Emperor of Japan during the Shogunate. The present King, His Majesty Maharajadhiraja Tribhubana Bir Bikram Jung Bahadur Shah Bahadur Shum Shere Jung Deva, ascended the throne on the deeth of his father in 1911. The real ruler of the country is the Minister who, while enjoying complete monopoly of power, couples with his official rank the exalted title of Maharaja. Next to him comes the Commander-in-Chef, who ordinarily succeeds to the office of Minister.

The present Minister at the head of affairs of Nepal is Maharaja Bhim, Shum Shere Jung Bahadur Rana, a c.s. 1, a c. m. g., K.v.o., Yit Tang-Paoting-Shun Chian, Luh Chuan-Shang-Chiang (Chinese), Honorary Lieutenant-General British Army and Hon. Colonel, 4th Gurkhas, who succeeded the late Maharaja (Shandra Shum Shere Jung Bahadur Rana as Prime Minister and Supreme Commander-in-Chief in November 1929 Soon after this accession to power, with the consummate skill and political acumen of a born duplomat he avoited a threatened breach of relations with Tibet. A man of proved ability as the Commander-in-Chief of Nepal he has manufactured. several urgent and important works of public utility. Already he has abolished certain uneconomical imposts such as those on salt, cotton, etc, has tentatively suspended capital punish-ment in the kingdom with a view to its final abolition, constructed a second water-works, improved mintage and expanded general education. The reclamation on a large scale of forest areas both in the hills and the Tarai is now going on, to provide a hearth and home for Guikhas retuing from Butish Service and part of the overflow population now nugrating outside the country. In all his public utterances he has expressed an earnest desire to uphold and augment the traditional friendship with the Butish Government.

Rice, wheat and maize form the chief crops in the low lands Mineral wealth is supposed to be great, but, like other sources of revenue, has not been developed. Communications in the State are primitive, but since 1920 the Government has already undertaken the construction of a good and permanent road for vehicular traffic from Amlekhgunj to Bhimphedi—the base of a steep ridge in the main route to the capital of the country from British India-and also has installed a ropeway to connect this base with the capita! proper covering a distance of 14 miles. A light railway from Amlekhgunj covering a distance of 25 miles in the route and connecting with the B. & N. W. Ry. at Raxaul also has been constructed and opened for traffic since March 1927. It has also put up a telephone over this route connecting the capital with the frontier township of Birgunge near Raxaul. The revenue is about two crores of rupces per annum. The standing army is estimated at 45,000 the highest posts in it being filled by relations of the minister. The State is of considerable archaeological interest and many of the sites connected with scenes of Buddha's life have been identified in

It by the remains of inscribed pillars.

British Envoy—Lieut.-Col. F M. Bailey,

Railways to India.

The prospect of linking Europe and Asia by Turkish Nationalists gained control of Anatolia railway running eastwards through Asia any question of the completion of the through inor has fascinated men's minds for generaa railway running eastwards through Asia Minor has fascinated men's minds for generations. The plans suggested have, owing to the British connection with India, always lain in the direction of lines approaching India More than 50 years ago a Select Committee of the House of Commons sat for two years to consider the question of a Euphrates Valley railway. The Shah of Persia applied to the railway. The Shah of Persia applied to the British Foreign Office for the investment of British capital in Persian rallway construction many years before the end of the nineteenth century. A proposal was put forward in 1895 for a line of 1,000 miles from Cairo and Port Said to Kowert, at the head of the Persian Gulf. While these projects were in the air, German enterprise stepped in and made a small beginning by constructing the Anatolian railway system. Its lines start from Scutari, on the southern shore of the Bosphorus, opposite Constantinople, and serve the extreme western end of Asia Minor. And upon this foundation was based the Turkish concession to Germans to build the Baghdad Railway.

Meanwhile, Russia was pushing her railway

from various directions into the Central Asian territory running along the northern frontiers of Persia and Afghanistan to the borders of Chinese Turkestan. The construction of a Trans-Persian railway, connecting India, across Persia, with the Russian lines between the Black Sea and the Caspian Sea came to the forefront after the conclusion of the historic Anglo-Russian agreement regarding l'ersia.

Anglo-Russian agreement regarding Persia.
The Germans pushed forward their Baghdad railway project with a calculating shrewdness arising from their estimate of the value it would possess in their grand aim to overthrow the British Empire. The outbreak of the great war and the success of the Germans in inveiging Turkey into it saw the final stages of the construction of the railway pressed fol ward with passionate energy. Thus, before the overthrow of the Turks and Germans in Asia Minor and of the Germans in France the Asia Minor and of the Germans in France the railway was completed and in use from Scutari across Anatolia, over the Taurus Mountains to Aleppo and thence eastward across the Euphrates to a point between Nisibin and Mosul The Germans had also by that time constructed a line to Baghdad at the eastern end of the route, northwards from Baghdad to a point a considerable distance beyond Samara

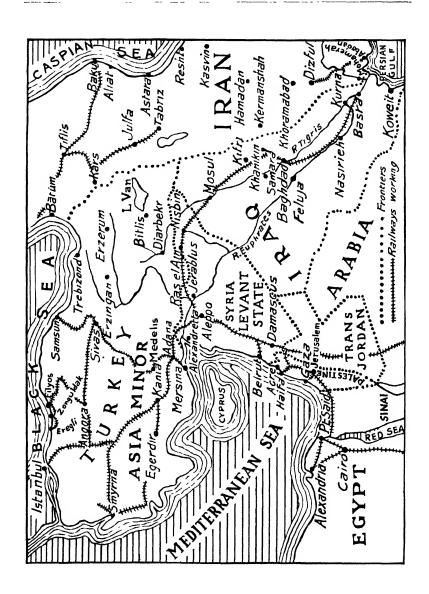

The war compelled the British to undertake considerable railway development northward from Basra, the port at the mouth of the hat-el-Arab, the broad stream in which the ligns and Euphrates, after their junction, flow into the head of the Persian Guif. The system consists of a metre-gauge line from Basra vic Consists of a metre-gauge line from Dasia va-Nasarieh, on the Euphrates, thence north wards to Baghdad, the line passing a consi-derable distance westward to Kuti-Lamara, of historic fame. From Baghdad the line runs eastward approximately to the loot of the pass through which the Persian road crosses the frontier of that country. A line branches off in the neighbourhood of Kifri in the direction of Mosul A line also runs westward from established speacial relations with liaghdad to Feluja, on the Euphrates. When the Valley and as a large trade there.

The Trans-Persian line to join the Russian Caucasian system and the Indian railways first assumed proportions of practical importance in the winter of 1911. Both the Russian and the Indian railway systems were by then well developed up to the point likely to be the termini of a Trans-Persian line. The Russian system reached Julfa, on the Russo-Persian system reached Julfa, on the Russo-Persian frontier in the Caucasus. During the wai this line was carried thence southward into the region east and south-east of Lake Uruma. The Indian railway system, on the borderland of India and Persia. was similarly much extended and improved during the war. A new agreement which was negotiated between England and Persia specially provided for British assistance in the development of Persian natural resources and particularly for the extension and improvement of Persian roads suitable for motor traffic, but the agreement came to naught.

The Foreign Minister of Persia, or Iran as it 18 now called, visited New Delhi in November, 1935, for informal discussions with the Government of India with a view to enlisting British help in the development of rail communications in Eastein Persia. The development thus envisaged was of a new Persian railway system linked with the British line running from Quetta, through Nushki, towards the Balachistan-Seistan frontier. The Quetta-Nushki line was extended across the Seistan border into Peisia during the Great War Its terminus was then Duzdap (or Zahidan), in Persia It has long ceased to be used further towards Persia than Nokkundi, in Baluchistan. The informal discussions did not crystallize into an agreement of formal undertaking on either side.

There remains the possibility of linking the Russian and Indian railway system by way of Afghanistan. The suggestion has often been made in recent years that the Russian line from Mery to Herat, on the northern fronties of Afghanistan, should be linked to the Indian line which proceeds from Quetta to the Afghan border on Chaman What the present Afghan Government think about the matter was not shown up to the time this article was written, but the strange situation in Central Asia and beyond the Indian North-West Frontier does not snggest the early removal of the strategic difficulties. The completion of a broad-gauge line extending the Indian railway system through the Khyber l'ass to I andi Khana, at its western extremity, opens a prospect of further possible rail connections with Afghanistan.

Britain's special interests in regard to Persian communications have hitherto primarily been associated with lines running inland from the Persian Gulf, to supersede the old mule routes. Special importance has for many years been attached to the provision of a railway from Mohammerah, at the opening of the Karun Valley, where the Karun River runs into the Shat-el-Arab, just below Basra, north wards into the rich highland country of Western Persia, where the valuable West Persian orliwells also lie. Britain has long established speacial relations with the Kariin

The Army.

The great sepoy army of India originated in the small establishments of guards, known as peons, enrelled for the protection of the factories of the East India Company; but sepoys were first enlisted and disciplined by the French, who appeared in India in 1665. Before this detachments of soldiers were sent from England to Bombay, and as early as 1665 the first fortified position was occupied by the East India Company at Armagon, near Masulipatam. Madras was acquired in 1640, but in 1654 the garrison of Fort St. George consisted of only ten men. In 1661 Bombay was occupied by 400 soldiers, and in 1668 the number was only 285 of whom 93 were English and the rest French, Portuguese and Indians.

After the declaration of war with France in 1744 the forces were considerably increased, but this did not prevent the French capturing Madras in 1746 Following the French example, the English raised considerable sepoy forces and largely increased the military establishments. In 1748 Major Stringer Lawrence landed at Fort St. David to command the forces of the Company The English footbold in India was then precarious and the French under Dupleix were contemplating fresh attacks. It became necessary for the English Company to form a larger military establishment. The new commandant at once set about the organisation and discipline of his small force, and the garrison was given a company formation. This was the beginning of the regular Indian Army of which Lawrence subsequently became Commander-in-Chief. In Madras the European companies were developed into the Madras Fusiliers; similar companies in Bengal and Bombay became the 1st Bengal and 1st Bombay Fusiliers. The native infantry were similarly organised by Lawrence and Clive By degrees Royal Regiments were sent to India, the first being the 39th Foot, which arrived in 1754.

Struggle with the French.—From this time for a century or more the army in India was engaged in constant war. After a prolonged war with the French, whom Dupleix had by 1750 raised to the position of the leading power in India, the efforts of Stringer Lawrence, Clive, and Eyre Coote completed the downfall of their rivals, and the power of England was established by the battle of Plassey in Bengal, and at Wandewash in Southern India, where the French were finally defeated in 1761. A number of independent States, owning nominal allegiance to the Emperor at Delhi, had risen on the decline of the Mughal Empire, some ruled by Mahratta Princes and others by Musalman adventurers such as Hyder Alı of Mysore. A prolonged struggle ensued with the latter and his son and successor Tipu Sultan, which ended only with the defeat and death of Tipu and the capture of Seringapatam in 1799.

Reorganisation of 1796.—In 1796 the lidish armies, which had been organised on the Presidency system, were reorganised. The European troops were 13,000 strong and

the Indians numbered some 67,000, the infantry being generally formed into 75 regiments of two battalions each. In Bengal, regiments were formed by linking existing battalions of ten companies each with large establishments of English officers. The Madras and Bombay armies were at the same time reorganised on similar lines, and cavalry and artillery companies were raised.

In 1798, the Marquib Wellesley arrived as Governor-General, firmly imbued with the necessity of destroying the last vestiges of French influence. In pursuance of this policy he reduced Mysore, where Tipu was intriguing with the French, and then turned his attention to the Mahratta States, in which Sindhia had established power over the Mughal Emperor at Delhi by means of a large regular army officered by Europeans under the French adventurer Perron. In campaigns against Sindhia in Hindustan by a British Army under General Lake, and in the Deccan against that prince and the Raja of Berar by an army under General Wellesley, afterwards Duke of Wellington, the power of these Chiefs was broken in the battles of Laswari and Assaye. French influence was finally destroyed, and the Mughal Emperor was released from the domination of the Mahrattas. Subsequently Holkar also was reduced, and British power established on a firm footling.

Mutiny at Vellore—The Indian Army had been from time to time subject to incidents of mutiny which were the precursors of the great cataclysm of 1857. The most serious of these outbreaks occurred at the fort of Vellore in 1806 when the native troops suiddenly broke out and killed the majority of the European officers and soldiers quartered in the fort, while the striped flag of the Sultan of Mysore, whose sons were confined there, was raised upon the ramparts The mutiny was suppressed by Colonel Gillespie, who galloped over from Arcot at the head of the 19th Light Dragoons, blew in the gate of the fort, and destroyed the mutineers. This retribution put a stop to any further outbreaks in the army.

Overseas Expeditions.—Several important overseas expeditions were undertaken in the early part of the nineteenth century Bourbon was taken from the French Ceylon and the Spice Islands were wrested from the Dutch, and Java was conquered in 1811 by a force largely composed of Bengal troops which had volunteered for this service.

In 1814, the Nepal War took place in which the brave Gillespie, who had distinguished himself in Java, was killed when leading the assault on the fort of Kalunga. The Gurkhas were overcome in this war after offering a stout resistance.

In 1817, hostilities again broke out with the Mahrattas, who rose against the British during the progress of operations against the Pindaris. Practically the whole army took the field and all India was turned into a vast camp. The

Mahratta Chiefs of Poona, Nagpur, and Indore in which the powder was enclosed in a paper rose in succession, and were beaten, respectively, at Kirkee, Sitabaldi, and Mehidpur. This was the last war in Southern India. The tide of war rolled to the north never to return. In the Punjab, to which our frontier now extended, our army came into touch with the great military community of the Sikhs.

In 1824, the armics were reorganised, the duble-battalion regiments being separated, and the battalions numbered according to the dates they were raised. The Bengal Army was organised in three brigades of horse artillery, five battalions of foot artillery, two regiments of European and 68 of Indian infantry, 5 regiments of regular and 8 of irregular cavalry Madras and Bombay armies were constituted on similar lines, though of lesser strength.

First Afghan War and Sikh Wars.— In 1839, a British Army advanced into Afghanistan and occupied Cabul. There followed the murder of the British Envoys and the disastrous retreat in which the army perished, This disaster was in some measure retrieved by subsequent operations, but it had far-reaching effects on British pressing. The people of the Punjab had witnessed these unfortunate operations, they had seen the lost legions which never returned, and although they saw also the avenging armies they no longer regarded them with their former awe. Sikh aggression lad to hostilities in 1845-46, when a large portion of the Bengal Army took the field under Sir Hugh Gough. The Sikhs were defeated after stubborn fights at Mudki and Ferozeshahr, the opening battles, but did not surrender until they had been overthrown at the battles of Aliwal and Sobraon Two years later an outbreak at Multan caused the Second Sikh War when, after an indecisive action at Chillanwala, our brave enemies were finally overcome at (lujerat, and the Punjab was annexed. Other campaigns of this period were the conquest of Sind by Sir Charles Napier, and the Second Burmese War, the first having taken place in

The conquest of the Puniab extended over the frontier to the country inhabited by those turbulent tribes which have given so much trouble during the past sixty years while they have furnished many soldiers to our army. To keep order on this border the Puniab Frontier Force was established, and was constantly engaged in small expeditions which, while they involved little bloodshed, kept the force employed and involved much arduous work.

ploved and involved much ardinous work.

The Indian Mutiny.—On the eve of the nutiny in 1857 there were in the Bengal Army 21,000 British and 137,000 Indian troops, in the Madras Army 8,000 British and 49,000 Indian troops; and in Bombav 9,000 British and 45,000 Indian troops. The proportion of Indian to British was therefore too large for after. The causes of the mutiny were proper. safety. The causes of the mutiny were many and various. Among these were the annexation policy of Lord Dalhousie, especially that of Oudh from which the greater part of the Bengal Army was drawn; interference with the privileges of the sepoy with respect to certain allowances; and lack of power on the part of commanding officers either to punish or reward. The final spark which fired the revolt was the introduction of a new cartridge. The muskets of those days were supplied with a cartridge last India Company ceased to exist

cover, which had to be bitten off to expose the powder to ignition. In 1857 a new cartridge was introduced with paper of a glazed texture which it was currently reported was greased with the fat of swine and oxen, and therefore unclean alike for Muhammadans and Hindus. This was interpreted as an attempt to destroy the caste and the religion of the sepoys. Skilful agitators exploited this grievance, which was not without foundation, and added reports that flour was mixed with bone-dust and sugar refined with the blood of oxen.

Disaffection culminated in mutiny at Berhampur and in an outbreak at Barrackpore where sepoy Mangai Pande attacked a European officer. The next most serious manifestation was the refusal of men of the 3rd Bengal Cavalry at Mecrut to take the obnoxious cartridge. These men were tried and sentenced to long terms of imprisonment, their fetters being rivet-ted on parade on the 9th May. Next day the troops in Meerut rose, and, aided by the mob, burned the houses of the Europeans and murdered many. The troops then went off to Delh. Unfortunately there was in Meerut no senior officer capable of dealing with the situation. The European troops in the place remained inactive, and the inutineers were allowed to depart unmolested to spread the flames of rebellion

Delhi is the historic capital of India. time worn walls brood the prestige of a thousand years of Empire. It contained a great magazine of aminunition. Yet Delhi was held only by a few Indian battalions, who joined the mutineers. The Europeans who did not succeed in escaping were massacred and the Delhi Emperor was proclaimed supreme in India The capital constituted a nucleus to which the troops who mutinled in many places flocked to the standard of the Mughal. An army was assembled for the recovery of Delhi but the city was not captured until the middle of September. In the meantime mutiny had spread The massacres of Cawnpore and Jhansi took place, and Lucknow was besieged until its relief on the 27th September. The rebellion spread throughout Central India and the territory that now forms the Central Provinces, which were not recovered until Sir Hugh Rose's operations in 1858 ended in the defeat of the Rani of Jhansi.

Minor Campaigns.—During the period until 1879, when the Second Afghan War began, there were many minor campaigns including the China War of 1860, the Ambeyla Campaign, and the Abyssinian War. Then followed the Afghan War in which the leading figure was Lord Roberts. There were expeditions to Egypt and China, and Frontier Campaigns of which the prot important was the Tital Campaigns of which the most important was the Tirah Campaign of 1897. There were also the prolonged operations which led up to or ensued upon the annexation of Burma, several campaigns in Africa, and the expeditions to Lhasa. But until 1914, since the Afghan War, the army of India, except that portion of the British garrison which was sent to South Africa in 1899, had little severe fighding, although engaged in many arduous enterprises.

and their army was taken over by the Crown. At this time the army was organized into three armies, viz: Bengal, Bombay and Madras, the total strength being 65,000 British and 140,000 Indian troops.

Several minor re-organizations took place during the following years, such as the linking of three Regiments together and the raising of Class Regiments and Companies. In 1895 the next large reorganization took place. This was the abolition of the three Armies and the introduction of the command system Four Commands were formed, viz Punjab, Bengal, Madras and Bombay.

Lord Kitchener's Scheme.—This system lasted until 1904 when under Lord Kitchener's re-organization the Madras Command was abolished and the Army divided into three Commands—the Northern, Eastern and Western corresponding to the Punjab, Bombay and Bengal Commands.

In 1907, Lord Kitchener considered that consequent on the delegation of administrative powers to Divisional Commanders, retention of such powers by Licutenant-Generals of Commands led to delay in the despatch of business. The Command system was therefore abolished and india was divided into two Armics—the Northern and Southern—each under a General Officer who was responsible for the command, inspection and training of the troops but was given no administrative responsibilities.

Early in the War both Army Commanders took the held and were not replaced until 1916 and 1917 when both had practically the same functions as their predecessors. It was now realised that administration was being unduly centralised at Army Readquarters and the machinery was becoming clogged with unnecessary details. To secure efficiency at A. H. Q., therefore, a certain measure of decentralisation was carried out in 1918. With the alteration of the designation "Army" to "Command" it has time, a considerable increase was made in the administrative staffs of the two Commands and the General Officers Commanding were given powers to deal with all administrative questions other than those dealing with matters "I policy, new principles of war.

The commands were increased to four in 1920, each under a General Officer Commanding-in-Chief.

Present System of Administration.

The essential features of the Army, as constituted on its present basis, will be found in the Army in India and its Evolution," a jubilication issued in 1924 with the authority of the Government of India.

The Secretary of State, as one of His Majesty's ministers, has a special responsibility and authomity in regard to the military administration in India.

The Secretary of State's principal adviser on Indian military affairs is the Secretary in the Military Department of the India Office. The post is filled by a senior officer of the Indian Army with recent Indian experience. The appointment is at present held by Lieutenant-General Sir John F. S. D. Coleridge, is C.B., C.M.G., D.S.O., who was formerly

Commander of the Peshawar District from October 1930 to May 1933. The Military Secretary is assisted by one first grade staff officer, selected from the Indian Army. In order that he may keep in touch with the current Indian affairs, the Military Secretary is expected to visit India during the tenure of his office. In addition, by a practice which has obtained for many years, a retired Indian Army officer of high rank has a seat upon the Secretary of State's Council.

The superintendence, direction and control of the civil and military government of India are vested in the Governor-General in Council, who is required to pay due obedience to all such orders as he may receive from the Secretary of State. The Viceroy's Executive Council exercise in respect of Army administration the same authority and functions as they exercise in respect of other dejartments of the Government; in the first phase of the representative institutions conferred upon India by the Montagu-Chelmsford Reforms Scheme, Army expenditure and the direction of military policy have been excluded from the control of the Indian Legislature.

Commander-in-Chief.-The authority in the chain of administrative arrangements is His Excellency the Commander-in-Chief, who by custom is also the Deience Member of the Viceroy's Executive Council. The appointment s held by His Excellency General Su Robert A. Cassels, G.C.B., C.S.I., D.S.O., Indian Army, who succeeded Field-Marshal Sir, Philip Chefwode He is also a member of the Council of State. All the work connected with the administration of the Army, the formulation and execution of the military policy of the Government of India. the responsibility for maintaining every branch of the Army, combatant and non-combatant, in a state of efficiency, and the supreme direction of any military operations based upon India are centred in one authority,—the Commander-in-Chief and Deirene Member. In addition, he administers the Royal Indian Navy and the Royal Air Force in India. The Commander-in-Chief is assisted in the executive side of his administration by 4 Principal Staff Officers, viz., the Chief of the General Staff, the Adjutant-General, the Quartermaster-General and the Master-General of Ordnance.

The Defence Department.—The Department is administered by a Secretary who, like other Secretaries in the civil departments, is a Secretary to the Government of India as a whole, possessing the constitutional right of access to the Viceroy, he is also for the purposes of Sub-section 4, Section 26 of the Regimental Debts Act, 1893 (56 Vict-C. 5) and the Regulations made thereunded Secretary to the Government of India in the Milltary Department. He also exercises the powers vested in the Army Council by the Geneva Convention Act, 1911, so far as that Act applies to India under the Order in Council No. 1551 of 1916 He is assisted by a Deputy Secretary (who is also Secretary of the Indian Soldiers' Board), an Under Secretary, a Director of Military Lands and Cantonments, a Director, Regulations and Forms, and two Assistant Secretaries (one of whom is also Joint Secretary of the Indian Soldiers' Board).

The Defence Department deals with all army services proper, and also the administration of the Royal Indian Navy and the Royal Air Force in India, in so far as questions requiring the orders of the Government of India are concerned. The Defence Department Secretariat has no direct relations with commanders of troops or the staffs of formations subordinate to Army Headquarters . it has continuous and intimate relations with Army Headquarters in all administration matters and is responsible for the administration of Cantonments, the estates of deceased officers and the compilation of the Indian Army List The Army administration is represented in the Legislature by the Defence Member in the Council of State, and by the Defence Secretary in the Legislative Assembly.

The Military Council—Is composed of the Commander-in-Chief as President, and the following members, namely: The Chief of the General Staff, as Vice-President, the Adjutant-General, the Quartermaster-General, the Master-General of Ordinance, the Air Officer Commanding Royal Air Force, the Secretary to the Government of India in the Detence Department and the Financial Adviser, Military Finance, representing the Finance Department of the Government of India. The Under Secretary, Defence Department, acts as its Secretary. It is mainly an advisory body, constituted for the purpose of assisting the Commander-in-Chief in the performance of his administrative duties. It has no collective responsibility. It meets when convened by the Commander-in-Chief for the consideration of cases of sufficient importance and difficulty to require examination in conference. The heads of the minor independent branches of Army Headquarters and the directors of technical services attend when required.

Military Territorial Areas.

Indian Ferritory is divided in four commands each under a General Officer Commanding-in-Chef and the Independent District of Burma under a Commander. The details of the organisation are given in the table on the next page and it will be seen that Commands comprise 13 districts '4 Independent Intrada, Areas and 30 Brigades and itsuides and it Brigade Areas and 30 Brigades and Brigade Areas. The Northern Command, with its headquarters at Murree, coincides roughly with the Punjab and North-West Frontier Province; the Southern Command, with headquarters at Poons, coincides roughly with the Bombay and Madras Presidencies and part of the Central Provinces and Rajputana; the Eastern Command, with headquarters at Naini Tal, coincides roughly with the Bengal Presidency and the United Provinces; the Western Command, whose headquarters are at Karacin covers Sind and Baluchistan.

The General Officer Commanding-in-Chief of each command is responsible for the command, administration, training and general efficiency of the troops stationed within his area, and also for all internal security arrangements.

Apart from the four commands, the only formation directly controlled by Army Head-quarters is the Burma district which, mainly quarters is the Burms district which, mainly because of its geographical situation, cannot conveniently be included in any of the four command areas. The Aden Independent brigade which was under the administrative control of the Government of India was trans-

ferred to the administrative control of His Majesty's Government from the 1st April 1927.

The distribution of the troops allotted to the commands and districts has been determined by the principle that the striking force must be ready to function in war, commanded and constituted as it is in peace. With this end in view, the Army in India is now regarded as comprising three categories of troops:

(1) Covering Troops,
(2) The Field Army,
(3) Internal Security Troops.
The role of the Covering Force is to deal with minor frontier outbreaks and, in the event of major operations, to form a screen behind which mobilisation can proceed undisturbed. The force consists of approximately 12 infantrybrigades with a due proportion of other arms.
The Field Army consists of 4 Divisions and 4

Cavalry Brigades. The Field Army is India's

striking force in a major war.

Army Headquarters.

The organization of the Army Headquarters with the Commander-in-Chief as the head, is founded upon four Principal Staff Officers charged with the administration of —

(a) The General Staff Branch;

(b) The Adjutant-General's Branch;

(c) The Quartermaster-General's Branch;
(d) The Master-General of Ordnance Branch.

General Staff Branch.

C. G. S.—Lt.-Genl. Sir William Bartholomew.

RCB, C.M.G, DSO, Brit Scr.

D C. G S -Maj -Genl E. de Burgh, CB,

DSO, OBE, IA

M G, Cav Col (local Maj-Genl) G F H

M. G., Cap. Co. (nocal Maj-Gen) G. F. H.
Brooke, D. So., M.C., Ernt. S.r.
M.G., R. A.-Maj-Genl. J. M. R. Harrlson,
C. B., D. So., Brit. Ser.
S. O. an-C.—Brigr. C. J., S. LeCornu, O. B. E.,
M.C., Brit. Ser.

This Branch deals with military policy, with plans of operations for the defence of India, with the organization and distribution of the army for internal security and external war, the administration of the General Staff in India the supervision of the training of the military forces for war, their use in war, the organisation and administration of the general staff in India; the education of officers, the supervision of the education of warrant and noncommissioned officers and men of the Army in India, and inter-communication services.

Adjutant-General's Branch.

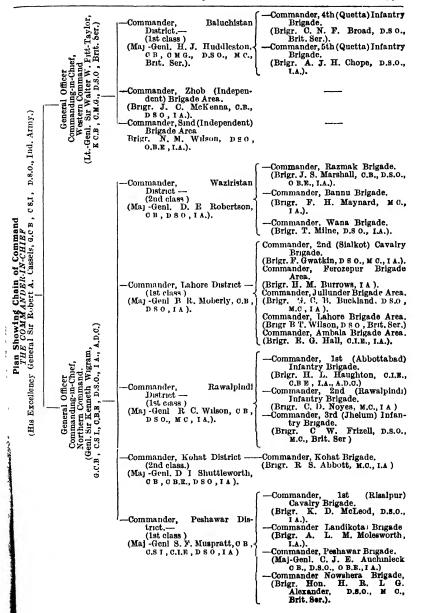

A. G.—Genl. Sir Walter S. Leslie, KCB, KBE., C.M.G., DSO., I.A., A.D.C. D. A. G.—Maj Genl. H. F. Salt, C.B., OMG,

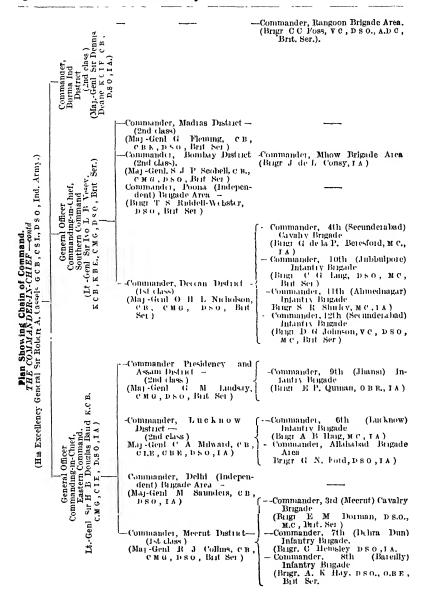

D 8 0 , Brit, Ser.

D. M. S — Maj -Genl. E. A. Walker, C.B.,

I M S., K.H S.

This Branch deals with all matters appertaining to the raising, organising maintenance of the military forces in officers and men, the peace distribution of the army, dis-cipline, pay and pensions, martial, military and international law, medical and sanitary matters affecting the Army in India, personal and ceremonial questions, prisoners of war, recruiting, mobilization and demobilization. The Judge Advocate-General forms part of the Branch. The Director of Medical Services in India, who was independent before the war, is now included in the Adjutant-General's Branch.

Quarter-Master General's Branch.

Q. M G --Genl Sir W. Edmund Ironside, RCB, CMG, DS.O, Brit Ser.

D Q M G -May -Genl C. B D Strettell, OB, IA

D S & T -Maj.-Genl. E M. Steward, CB, o B L , I A

This Branch is concerned with the specification, provision, inspection, maintenance and issue of supplies, i.e., foodstuffs, forage, fuel, etc., and is responsible for the following Services —Transportation, Movements, Quar-Services —Transportations:

tering, Supply and Transport, Almost,
farms, Remounts, Veterinary, Garrison and
Farms, Remounts, Also for the purchase bulk by the authority responsible for production and provision.

Master General of the Ordnance Branch

M G O -- Lt -Genl Sir Henry E ap Rhys Pryce, KCB, CMG, DS.O, IA.

D M G O -Maj-Genl R k. Hezlet, CB., ChE., DSO., But. Ser

This Branch controls the ordnance and clothing factories and is concerned with the provision. inspection, maintenance and issue of equipment and ordnance stores, clothing, and necessaries and conducts all matter relating to contracts in respect of food-stuffs, &c., and supply in bulk of general stores and materials. The Master-General is also responsible for the design, mspection, and supply of guns, carriages, tanks, smallarms, machine guns, ammunition, chemical warfare appliances, etc. He also deals with questions regarding patents, royalties and inven-

There are other branches of Army Headquarters administered by officers who are not classified as Principal Staff Officers, but are not directly subordinate to any of the four Principal Staff Officers.

These are

(1) MILITARY SECRETARY'S BRANCH.

Mily Secy —Maj -Genl. W. L. O Twiss, C B,

CBT, MC.IA.

The Military Secretary deals with the appointment, promotion and retirement of officers holding the King's Commission, of officers of the Indian Land Forces, the selection of others for staff appointments, and the appointment of officers to the Army in India Reserve of Officers. He is also the Secretary of the Selection Board.

(2) ENGINEER-IN-CHIEF'S BRANCH.

L'-in-C —Maj-Genl G H. Addison, CB,

(MG, DSO. Brit Ser

The Engineer-in-Chief is the head of the Corps of Royal Engineers in India. He is responsible for Engineer operations and Engineer Services during war and peace, the preparedness for war of the Engineering services. The supply of Engineer tores during war and peace. The construction and maintenance of all military works and the constructional efficiency, accuracy and economy of all projects and designs.

In addition to the above, the Army Headquarters staff includes certain technical advisers, otz, the Major-General, Cavalry, the Major-General, Royal Artillery, and the Adviser and

secretary, Board of Examiners.

The duties of the Inspector of the Army Educational Corps, India and the Inspector of Physical Training are carried out by the Commandants of Army School of Education, India, Belgaum and Army School of Physical Training, Ambala, respectively.

Regular British Forces in India.

The British cavalry and British infantry units of the army in India are units of the British service. No individual British service unit is located permanently in India. Units of the British Army are detailed for a tour of foreign service, of which the major part is as a rule spent in India. In the case of British infantry battalions the system is that one battalion of a regiment is normally on home service while the other is overseas. In the case of British cavalry the same arrangement cannot be applied, as one unit only comprises the regiment.

In Great Britain, in peace-time, units are maintained at an establishment smaller than that required for war. In India, the peace establishments exceed the war establishments in view of the fact that reserves of British personnel do not exist, and reinforcements must be obtained from Great Britain.

British Cavalry.—There are 5 British cavalry regiments in India. The establishment of a British cavalry regiment is 27 officers and 567 other ranks.

British Infantry.—The present number of Buttish infantry battalions in India is 45, each with an establishment of 28 officers and 865 other ranks.

In 1921, an important change was made in the composition of a British infantry battalion in India by the inclusion of a proportion of Indian combatant ranks. Battalions had always maintained a quota of Indian followers, but up to 1921 the combatant personnel was entirely British. In 1921, on the abolition of the Machine Gun Corps, eight machine guns were included in the equipment of a British infantry battalion. This number was increased to twelve in 1927. In 1929, a change of organisation was introduced, and the battalion now comprises Headquarters Wing-1 Support Company and 3 Rifle Companies Each Rifle Company has 4 Lewis guns The Support Company is organised news gains - the support company is organised into —Headquarters and 3 Platoons (all on pack) each of 2 Sections of 2 Vickers guns each The peace establishment of Indian combatant personnel is fixed at one Indian officer and 42 Indian other ranks The Support Company platoon, as it is called, is transferred en bloc to another British battalion when the battalion to which it was originally attached proceeds on relief out of India.

Royal Artillery.—Indians are employed as drivers and artificers in the Royal Horse Artiliery and in field and medium batteries, as drivers, gunners and artificers in mountain batteries, and as gunners in heavy batteries

The peace organisation of the artillery at the present day is as follows:

Royal Horse Artillery —Comprisses four in dependent batteries. Each battery is ai med with six 13-pounder guns.

Field (Higher and Lower Establishment) Brigades.
—Four brigades on the higher establishment, each consisting of headquarters and four batteries. Four brigades on the lower establishment, each consisting of headquarters and four batteries. A brigade on the higher establishment consists of 2 batteries of six 18 prs each and 2 batteries of six 18 ff. Howitzers. A brigade on the lower establishment consists of 2 batteries of four 18 prs. each and 2 batteries of four 45" Howitzers.

Field (Mechanised) Brigades.—Two mechanised brigades each consisting of two batteries with armed four 18-pounder guns, and two batteries armed with four 4-5" howitzers.

Indian Mountain Brigades.—Six brigades, each consisting of headquarters, one British light and three Indian mountain batteries, one unbrigaded mountain battery also one mountain Arthiery Section for Chitral and one Survey Section. All batteries are armed, with four 3.7" howitzers. The armaments of the Frontier nosts at Kohat, Fort Lockhart, Fort Milward, Fort Salop, Jhansi post, Arawali, Bannu, Wana Mir Ali, Wana Thal, Chaman, Hindubaghi, Malakand, Landi Kotal, Shagai; Chakdura and Fort Sandeman are also manned by personnel of Indian Mountain Brigades, R.A.

Medium Brigades.—There are two such brigades. Three batteries in each brigade, two of which are armed with six 6" howitzers, and one battery with four 60-pounder guns.

Heavy Brigade.—One battery at Bombay and one at Karachi.

Anti-Aircraft—Headquarters One battery, located at Bombay. The battery is armed with eight 3 inch, 20 cwt guns.

Indian Regiment of Artillery.—The first unit of this new corps has been raised as a field artillery brigade and is designated "A Field Brigade, Inrilan Artillery. The establishment of this brigade consists of brigade headquarters, 2 batteries each of 18-pr. guns and 2 batteries each of four 4.5" howitzers.

Artillery Training Centres.—One centre at Mutra, for Indian ranks of R H. A. and of field medium and anti-air craft another centre at Ambala for Indian ranks of Light, Mountain and Heavy Artillery. These centres were created for the recruitment and training of Indian personnel. There is also a R. A. Hoys Depot at Bangalore.

Engineer Services.

The Engineer-in-Chief.—The head of the Corps of Royal Engineers in India is directly responsible to His Excellency the Commander-in-Chief. The Engineer-in-Chief is not a Staff Officer, but the technical adviser of the Commander-in-Chief on all military engineering matters and is responsible for:

- Engineer operations and engineer services during war and peace.
- (2) The preparedness for war of the engineer. ing services.

- (3) The supply of engineer stores during war and peace.
- (4) The execution and maintenance of all military works.
- (5) The constructional efficiency, accuracy and economy of all projects and designs submitted by him.

The Organisation.—The Engineer organisation of the Army consists of two main branches, viz., the Sappers and Miners and the Military Engineer Services.

The composition of the Corps of Suppers and Miners is as follows:

Queen Victoria's Own Madras Sappers and Miners, with headquarters at Bangalore, King George's Own Bengal Sappers and Miners, with headquarters at Roorkee Royal Rombay Sappers and Miners, with headquarters at Kirkee.

The personnel of the Corps consists of Royal Engineer officers, Indian Army Officers from the late Pioneer Corps, Indian officers holding the Viceroy's commission, a certain number of British warrant and non-commissioned officers and Indian other ranks. Each Corps is commanded by a Lieut-Colonel, who is assisted by a Superintendent of Instruction, an Officer-in-Charge, Worksshops, an Adjutant, three Quartermasters, three Subadar-Majors, a Jemadar Adjutant and a Jemadar Quartermaster.

Field Troops are mounted units, trained to accompany cavalry, and are equipped to carry out hasty bridging, demolition and watersupply work. Field Companies are trained to accompany infantry. Divisional Headquarters' Companies are small units containing highly qualified "tradesmen" and are trained to carry out technical work in connection with field workshops. Army Troops Companies are somewhat smaller units than field companies; they are required to carry out work behind divisions, under the orders of Chief Engineers, e.g., heavy bridging work, large water-supplies, electrical and mechanical installation.

The Military Engineer Services control all military works in India, and Burmr except in the case of a few small outlying military stations, which are in charge of Public Works Department. They control all works for the Royal Air Force and all such works as are entrusted to them in respect of the Royal Indian Navy: and they are charged with all civil works in the North-West Frontier Province and Baluchistan under the orders, in each of these two areas, of the Governor and Agent to the Governor-General, respectively. They also control civil works in Bangalore, under the Mysore Government.

The Engineer-in-Chief is assisted by a Deputy Engineer-in-Chief (Works) and a Deputy Engineer-in-Chief (Electrical and Mechanical). In each Command there is a Chief Engineer, while in the Northern Command a Deputy Chief Engineer administers Military and Civil works in the N. W. F. P. and is Secretary, P. W. D., to the Govt. of N. W. F. Province. The Chief Engineer, Western Command, is the

Secretary, P. W. D., to the Agent to the Governor-General in Baluchistan. Both at Army Headquarters and in Commands there are Staff Officers, R. E., and Technical Officers. At the headquarters of each district there is a Commander, Royal Engineers, assisted in certain districts by A Cs. S. R. E. Officers of the Barrack Department are also employed as District Stores Officers. Garrison Engineers are in charge of brigade areas and military stations, their charges being divided into sub-divisions under Sub-divisional Officers. The sub-divisions are Buildings and Roads, Electrical and Mechanical, and Furniture and Stores. There are sub-overseers for Buildings and Roads and the Barrack Department subordinates in charge of Furniture and Stores are assisted by store-keepers.

Royal Air Force in India.

The Royal Air Force in India is controlled by the Commander-in-Chief in India as part of the defence services of the Indian Empire The air Force budget is incorporated in the blefence Services Estimates. The Commanding in India is an Air Marshal whose rank corresponds to that of a Lieut-General in the Army. The appointment is now held by Air Marshal Sir Edgar R. Ludlow-Hewitt, KOB, CM.G.DSO, MC

The headquarters of the Air Force is closely associated with Army Headquarters and is located with the latter at the seat of the Government of India. The Air Officer Commanding has a headquarters staff constituted in six branches, namely, air staff, personnel, technical, stores, medical and chief engineer. The system of staff organisation is similar to the staff system obtaining in the Army. Broadly speaking, the duties assigned to the divisions mentioned are those which are performed by the General Staff Brainch, the Adjutant-General's and Military Secretary's branches, the Quartermaster-General's Branch, the Medical Directorate and the Engineer in Chief's branch respectively, of Army Headquarters

Subordinate formations.—The formations subordinate to the Royal Air Force Headquarters are:—

(i) GROUP COMMAND, comprising 2
Wing Stations of two squadrons
each, on a station basis.

(ii) Wing Command comprising 2

(ii) Wing Command comprising 2 squadrons not on a station basis

(111) Station Commands. (10) The Aircraft Depot.

(w) The Aircraft Depot.
(v) The Aircraft Park.

(vi) Heavy Transport Flight. (vii) R.A. F. Hill Depot, Lower Topa.

Group Command.—The Group Command is known as No. 1 (Indian) Group Headquarters, and is located at Peshawar. The Group Commander is a Group Captain, corresponding in rank to a Colonel in the Army. His staff is organised on the same system as that of the Headquarters of the R.A.F. in India. The establishment of the Group consists of 7 officers and 21 airmen.

The subordinate units to No. 1 (Indian) Group

Headquarters are as follows:—
No. 1 Wing Station, R.A.F., Kohat.
No. 2 Wing Station, R.A.F., Risalpur.

Army Co-operation Squadron at Peshawar.

Wing Command.—There is one Wing Command only namely 3 (Indian) Wing, R.A.F., located at Quetta. The Wing Commander is an officer with Air Force rank corresponding to a Lieutenant-Colonel in the Army.

He is equipped with a staff organised on approximately the same system as the Headquarters of a Group. The Wing Establishment consists of 5 officers and 13 airmen.

Wing Station Commands.—There are 2 Wing station commands in India, one located at Peshawar and the other at Risalpur. Each station consists of two squadrons on a reduced squadron basis with one administrative head, i.e., Station Headquarters under the command of a Wing Commander. The strength of the Station Headquarters is 8 officers and 112 airmen, while that of the two squadrons totals 24 officers and 106 airmen. The wing Station at Risalpur also administers the Parachute Section

The Squadrons.—Of the 8 squadrons 7 are extended along the North West Frontier from Quetta to Risalpur, and one is stationed at Ambala.

The squadron is the primary air force unit, and it consists, normally, of a Headquarters and three flights of aeroplanes. A flight can be detactled temporarily but not permanently from its squadron as repair facilities, workshops and stores cannot economically be organised on anything less than a squadron basis. The squadrons headquarters comprises the officers and othe, ranks required for the command and administration of the squadron as a whole; it includes the workshops and repair units, the armourles and equipment stores of the squadrons.

The number of aeroplanes in a squadron varies with the type of aeroplane with which the squadron is equipped; but speaking generally squadrons on a peace basis have twelve aeroplanes i.e., four in each of three flights. This does not however apply to the twin engined bombing squadrons

Of the 8 squadrons 4 are equipped with Bistol Fighters and four with Wapitis and they are allotted for distant reconnaissance and bombing duties, of the other four, which are allotted for Army Co-operation duties, two squadrons are equipped with Bristol Fighters and two with Wapitis aircraft.

Squadron Establishment.—The establishment of officers in a squadron consists of seven officers in the Headquarters, and fifteen officers allotted to flying duties. This allows a reserve of one officer for each of the operative flights.

The establishment of other ranks is 123 airmen. The Aircraft Depot.—The Aircraft Depot may be conveniently described as the wholesale store and provision department of the Royal Air Force. Technical stores are received from the United Kingdom, and in the first instance, held by this unit. It is the main workshop and repair shop of the Force, where all engine repairs, and aircraft repairs of any magnitude are carried out. New aeroplanes received from the United Kingdom are also erected here. The Depot is located at Drigh Road, Karachi.

The Aircraft Park—Relatively to the Aircraft Depot, the Aircraft Park may be described as a central retail establishment, intermediate between the squadrons and the Aircraft Depot. It receives stores from the depot and distributes them to the squadron. The Stocks held in the Park are, however, usually imited to items necessary at short notice for operations, and the quantities held are kept as low as distance from the depot and local conditions will admit. In war, an Aircraft Park is intended to be a mobile formation, though the aircraft Park in India cannot be made mobile under ordinary conditions. In peace, the Aircraft Park is located at Lahore. In addition to the above functions, practically the whole of the motor transport bodies required for R.A. F. vehicles and all other mechannal transport vehicles in the command are built or repaired at Aircraft Park. The Heavy Transport light is administered by this unit.

Composition of Establishments. The personnel of the Royal Air Force in India consists of officers, warrant officers, non-commissioned officers and men in the ranks of the R. A. F. of the United Kingdom, and Indian artificers, Mechanical Transport drivers and followers of the Indian Technical and Followers Corps. R. A. F. in India. The officers are employed on administration, flying and technical duties but all with the exception of officers of the store and medical branches are required to be capable of flying an aeroplane. A proportion of airmen are also trained and employed as pilots for a period of five years, after which period, they revert to their technical trades. Apart from these airmen all warrant officers, non-commissioned officers and aircraftsmen are employed solely on technical duties. The only other flying personnel who are not officers or airmen pilots are air gunners and a certain percentage of wireless operators.

The warrant officers, non-commissioned officers and aircrattamen are employed at all units. The personnel of the Indian Technical and Followers Corps are employed as follows:—

(a) Technical Section
(artificers)

(b) M. T. Drivers Section

Aircraft Depot.
Aircraft Park.

All Units.

(c) Followers Section . . All Units.

he total establishment of the Royal
Air Force in India is as follows —

Officers ... 265
Airmen ... 1,894

The Royal Air Force Medical Services.—In India, as in the United Kingdom, the Air Force has a medical service of ite own. Flying is carried out under conditions which differ widely from those on the ground. With the growth of aeronattics therefore, it was found necessary to create a separate department of medical science whose functions, broadly stated are to study the effect of diying upon the human constitution both mental and physical, to study also the effects of different forms of illness and physical is ship.

lity upon flying efficiency and to apply in practical iorm the results ascertained. The essential object in view is to save life by ensuring, so far as possible that those who fly are physically and psychologically fit to do so. The present establishment of the Royal Air Force Medical Service in India consists of 10 officers and 2-airmen. The Medical Administration is controlled by the Principal Medical Officer of the rank of Group Captain, on the staff of the Air Officer Commanding the R. A. F. in India,

Indian Air Force.—This force came into existence on 8th October 1932, the date on which the first batch of six Indian cadets, after receiving training at Cranwell, obtained comission as Pilot Officers. These officers will form the first unit of the Indian Air Force. The training of cadets for the Indian Air Force cannot at present be undertaken in India, and arrangements have been made to continue their training at Cranwell.

Regular Indian Forces.

Indian Cavalry.—The present number of Indian cavalry regiments is 21

The peace establishment of an Indian cavality regiment comprises:

14 British officers.

32

19 Indian officers.

492 Indian non-commissioned officers and men.

Indian Infantry.—The establishment of the Indian Infantry is constituted as follows. Battalions

19 Infantry Regiments consisting of ... 98
3 Regiments of Sappers and Miners ... 7
10 Gurkha regiments consisting of ... 20

125

The normal strength of an active battalion

		British Officers	Indian Officers.	Indian other ranks
Infantry	::	12	20	703
Gurkhas		13	22	898

The strength of an infantry training battalion depends upon the number of battalions forming the regiment. The average is as follows—

British Officers 10, Indian Officers 15, and Indian other ranks 780.

In 1932 it was decided that the Ploneer organization was no longer absolutely necessary as the duties on which Ploneers were employed eg, road-making etc, were now generally performed by labour. The whole organization has therefore been disbanded, and the opportunity has been taken to make a much needed addition to the various Engineer units (Sappers and Miners).

Reserves for the various units of the Indian Army have to be sufficient to provide for an actual shortage on mobilisation as well as for the maintenance of the mobilised unit at full strength for the first 8 months after mobilisation.

Reserve,—The conditions of the reserve, are as follows:—

nying upon the human constitution both mental and physical, to study also the effects soldiers or their equivalent. It is comprised of different forms of illness and physical disabi- of class 'C' reservists for Indian Cavalry

Artillery, Sappers and Miners, Signals and Infantry and class 1 for Gurkha Rifles. The new class 'C' reserve was introduced for Indian Cavalry, Artillery, Sappers and Miners and Signals with effect from 1st October 1932 and for Indian Infantry with effect from 1st May 1932. There still remain a number of classes 'A' and 'B' reservists which count against the authorised establishment of the reserve but those will be gradually eliminated.

Training for Indian Cavalry, Infantry and Gurkha Rifles reservists is carried out biennially

Reserve pay at certain specified rates is admissible from the date of transfer to, or enrolment in, the reserve. When called up for ment in, the reserve. When cannot up for service or training, reservists receive pay and allowances, in lieu of reserve pay, at regular rates according to their arm of the service.

The establishment of reservists is fixed at present as follows :--

Cavalry			• •	2,940
Artillery				2,325
Engineers				2,350
Indian Signal	Corps			625
Infantry				22,120
Gurkhas				2,000
Railway Nuc	Ieus Re	serve		652
Supplementa				255
	Tot		• -	33,267

The Indian Signal Corps.—The Corps is organised on the same lines as a Sapper and Miner Corps, with a headquarters for recruiting and training personnel, and detached field units for the various army formations. The head of the colps is the Signal Officer-in-Chief in the General Staff Dianch at Army Headquarters. He acts as a technical adviser on questions connected with signals, and is also responsible for the tech-nical inspection of all signal units. A chief signal officer with similar functions is attached to the headquarters of each Army Command.
The British portion of the Corps has now been amalgamated with the Royal Corps of Signals.

The Signal Training Centre, India, is located at Jubbulpore, and is commanded by a Lieut-Colonel, assisted by a staff, British and Indian, organised on very much the same lines as the headquarters of a Corps

of Sappers and Miners.

The various types of field units and the number maintained are: Corps Signals Headquarters in-

cluding Line and Wireless Company Cavalry Brigade Signal Troops

4 Divisional Signals District Signals 3 Experimental Wireless Section ... Zhob Signal Section. 1

In addition, there is an Army Signal School which carries out the training of regimental

signalling instructors.

The formation of the District signals units was effected in 1926 with the transfer of Communications on the North-West Frontier to the Posts and Telegraphs Department. This transfer of communications also made feasible the raising of the 'A' and 'C' troops of Cavalry Brigade Signals to include a Wireless Section each the formation of two Corps Signal Headquarters, The District Signals are located at Peshawar, Waziristan and Kohat.

Royal Tank Corps.—Six armoured car companies arrived in India in 1921. Two more companies arrived in 1925. Two Group Headquarters were sanctioned in 1925. They were located as follows -the Northern Group at Rawalpindi, this Group Headquarters com-manded companies in the Northern and Eastern Commands. The Southern Group at Poona. This Group Headquarters commanded companies

in the Southern and Western Commands.
These have been abolished and their duties are carried out by the Commander, R Tank Corps, Northern Command, so far as that command is concerned and by the Commandant, R. T. C. School, Ahmednagar, in respect of the other three commands. There is a school at Ahmednagar for the training of R. I personnel and the conduct of experiments. the training of R. T. C.

Organisations -3 Light Tank Companies Each company consists of Headquarters and 3 Sections and is armed with 25 Carden Lloyd Light Tanks , 4 for Company Headquarters and 7 per section.

5 Armoured Car Companies. Each company consists of Headquarters and 3 Sections and is armed with 16 armoured cars; I for Company Headquarters and 5 per section. The armoured cars at present in India are of various types

The establishments of the Royal Tank Corps formations are shown below:-

				British Officers.	British other ranks.	Followers.	Motor cars.	Motor cycles.	Armoured cars.	Lorries.
Tank Corps School				5	41	15	1	2	9	9
Armoured Car Company	••	••	••	12	145	32	2	6	16	10

Medical Services.—The military medical services in India are composed of the following categories of personnel and subordinate organi-Bations

(a) Officers and other ranks of the Royal Army Medical Corps serving in India;
(b) Officers of the Indian Medical Service

in military employment.

- (c) The Indian Medical Department, consisting of two branches, viz., (1) assistant surgeons and (ii) sub-assistant surgeons.
- (d) Queen Alexandra's Imperial Military Nursing Service.
- (e) The Queen Alexandra's Military Nursing Service for India.

(f) The Army Dental Corps.

(g) The Indian Military Nursing Service.(h) The Indian Hospital Corps.

Of these categories, the officers and men of the Royal Army Medical Corps and the Army Dental Corps, the assistant surgeons of the Department and the Medical Queen Alexandra's Imperial Military Nursing Service and the Queen Alexandra's Military Nursing Service for India military Nursing Service for India are primarily concerned with the medical care of British troops; while the officers of the Indian Medical Service, the sub-assistant surgeons of the Indian Medical Department and the Indian Military Nursing Service are concerned, primarily, with the medical care of Indian troops. The Indian Hospital Corps serves both organisations.

Civilians of miscellaneous classes employed by the Army in Waziristan are given medical treatment in military hospitals, and arrange-ments have been made with the Headquarters of the Indian Red Cross Society for the medical treatment and care of cases amongst Indian soldiers and followers of the Indian Army for chronic diseases, such as tuberculosis, leprosy

and diabetes.

Indian Army Service Corps.—The Indian Army Service Corps is the counterpart of the Royal Army Service Corps of the British Army. It has developed from the Commis-Army. It has developed from the Commissoriat Department of an earlier period, and its immediate predecessor was the Supply and Transport Corps, by which name the service was known up to 1923. The Indian Army Service Corps which is under the control of the Quartermaster-General, is constituted in three main branches, namely: (a) Supply, (b) Animal transport, and (c) Mechanical Transport. The latter is constituted upon a special basis, which is, generically, a sub-division of the Royal Army Service Corps organisation.

The strength of the establishment is shown by categories in the following table .-SUPPLY.

Total 4,640

There are also 3,235 reservists. The mechanical transport establishment consists of the following:-

(a) Field units-

11 M. T. Companies, consisting of 11 headquarters, 37 sections (higher establishment), and 4 service sections (lower establishment).

5 M. T. Companies for motor ambulance convoys consisting of 5 headquarters, 1 section (higher establishment) and 11 sections (lower establishment).

M. T. Companies (Mobile Repair Units) consisting of 2 headquarters and 4 sections.

Headquarters, Chaklala.

(b) Maintenance units-5 Heavy Repair shops. Central M. T. Stores Depot. Vehicle Reserve Depot. Experimental Section.

Apart from units and vehicles employed in the conveyance of military stores, the mechanical transport service also provides motor ambulance convoys for hospitals and field medical units, and vehicles for other miscellaneous purposes. The total establishment now consists of 2,088 vehicles with 109 motor cycles. The mechanical transport was taken over by the Indian Army Service Corps in 1927. At present the officers of the service are mainly drawn from the Royal Army Service Corps since at present there are no facilities in India for training officers in every branch of mechanical transport duties. The establishment of officers includes, however, a certain number of King's commissioned officers belonging to the Indian

Army. The British subordinates of the service are drawn entirely from the Royal Army

The Ordnance Services which are under the M.G O, may be broadly described as the agency whose duty it is to supply the army with munitions of war, such as small arms, guns, ammunition and other equipment of a technical military character, and also, under an arrangement introduced in recent years, with clothing and general stores other than engineering stores. A central disposal organisation is in operation under the control of the Master General of Ordnance to dispose of the Surplus Stores and waste materials of the various services of the Army and the Royal Air Force in India to the best advantage of the State.

Army Remount Department —The following are among the most important duties for theremount service:—The provision of animals for the Army in India. The enumeration throughout India of all animals available for transport in war. The animal mobili-

zation of all units services and departments of the army. A general responsibility for the efficiency of all the animals of the army both in peace and war. The ad-ministration of the remount squadron formed in 1922 as a nucleus for expansion into three squadrons on mobilization. Breeding operations of a direct character.

The department is organised on lines corresponding to the remount service in the United Kingdom. Its composition is as follows: The Remount Directorate at Army Headquarres consisting of one Director and a Deputy Assistant Director. 4 Remount officers, one attached to each Command Headquarters, 6 Superintendents of Remount Depots, 5 District Remount officers of horse-breeding areas and the Ahmednagar Stud, 10 Assistant Remount

officers and 8 Veterinary officers.

Veterinary Services in India -The Veterinary services are responsible for the veterinary care, in peace and war, of animals of British troops, Indian cavalry and artillery, I. A. S. C. units, the remount department (excluding horse-breeding operations), etc. The veterinary breeding operations), etc. The veterinary services include: The establishment of Royal Army Veterinary Corps officers, serving on a tour of duty in India and those of the continuous service cadre. The establishment of warrant and non-commissioned officers, India Unattached List, and veterinary assistant surgeons of the Indian Army Veterinary Corps.

The organisation consists of 20 veterinary hospitals, Class I, 25 veterinary hospitals, Class II, 25 branch veterinary hospitals, Sick lines and 12 Indian Army Veterinary Corps Sections of personnel posted to veterinary hospitals during peace and forming a cadre for expansion on mobilisation to provide technical

personnel for all veterinary units.

Military Farms Department —This department, which is under the control of the Quartermaster-General consists of two branches:-(i) The military grass farms, provide fodder for the army.

(ii) The military dairy farms, for the provision of dairy produce for hospitals, troops

and familles.

Educational Services.-The education of the army is under the control of the Army Educational Corps and of Indian officers borne supernumerary to the establishment of units of the Indian Army. The establishment is as follows including training schools:—

British	Indian officers.	В. О.	I. 0.	Civilians.
61	49	164	877	4,847

Terms of service in the Indian army are

Cavalry, 7 years' service in army and 8 years in the reserve.

Artillery, 7 years' service in army and 8 in the reserve for gunners and drivers (horse); drivers (mechanical transport) 6 years in army and 9 years in the reserve; and 4 years' service in army for Heavy Artillery personnel.
S. & M. Corps, 7 years' service in army and

8 in the reserve.

Indian Signal Corps, 7 years' service in army and 8 in the reserve.

Infantry (except Gurkhas and trans-frontier personnel of the Infantry other than Orakzais),

7 years in army service and 8 years in the

Gurkhas and trans-frontier personnel of infantry, a years' service in arms.

Indian combatant personnel of British infantry 6 years in army.

Indian Military establishments of the Indian Army Ordnance Corps, 4 years' service in the army.

Animal transport personnel of the Indian Army Service Corps, drivers of mechanical transport and all combatants of the Army Veterinary Corps, 6 years' service in army and 9 in the reserve.

All combatants in the Works Corps, 2 years' service in army.

Bandsmen, musicians, trumpeters, drummers, buglers, fifers and pipers, 10 years' service in

Except in the case of those enrolled in the Works and of those who are non-combatants. all school-masters, clerks, artificers, armourers. engine drivers, farriers, carpenters, tallors and bootmakers, 10 years' service in army.

The period laid down for service in the army is the minimum and may be extended.

Combatants may be enrolled direct into
the Reserve, in which case there is no minimum period of service, but no one is allowed to serve in the reserve or in any class of the reserve for a longer period than is permitted by the regulations in force.

Frontier Militia and Levy Corps.—
These forces are "Civil" troops, s.c., they are administered and paid by the Civil authorities and not by the Army. They are, however, officered by Officers of the Regular Indian Army. These forces were raised for duty on the North-West Frontier and at present consist of the following -Kurram Militia, Tochi Scouts, South Wazırıstan Scouts, Chitral Scouts, Scouts, Zhob militia and the Mekran Levy Corps.

The Auxiliary Force.

After the war, the question of universal training for European British subjects came up for consideration, and it was decided that in India, as elsewhere in the Empire, the adoption of compulsory military service would be undesirable. It was recognised, however, that India needed some adequate auxiliary force, if only on a voluntary basis, that could be trained to a fairly definite standard of efficiency of the country of the country basis, that could be trained to a fairly definite standard of efficiency of the country basis, that could be trained to a fairly definite standard of efficiency of the country of t ciency; and in the result, an Act to constitute an Auxiliary Force for service in India was passed in 1920. Under this Act membership is limited to European British subjects, and the liability of members for training and service is clearly defined. Military training is graduated according to age, the more extended training being carried out by the younger members, the older members being obliged to fire a musketry course only. It was laid down that military service should be purely local. As the form of service that would be most suitable varies largely according to localities, the local military authorities, acting in consultation with the advisory committee of the Auxiliary Force area, were given the power of adjusting the form of training to suit local conditions.

The Auxiliary Force comprises all branches of the service, cavalry, artillery, engineers, infantry—in which are included railway battalions,—machine gun companies, a Signal Company, and the Medical and Veterinary Corps. Units of the Auxiliary Force are under the command of the local military authority, and the latter has the power of calling them out for service locally in a case of emergency. Their role is to assist in home defence. Training is carried on throughout the year. Pay at a fixed rate is given for each day's training and, on completion of the scheduled period of annual training, every enrolled member of the force is entitled to a certain bonus. Men enrol in the Auxiliary Force for an indefinite period. An enrolled person is entitled to claim his discharge on the completion of four years' service or on attaining the age of 45 years. Till then he can only be discharged on the recommendation of the advisory committee of the area.

The duties connected with the Defence Light Sections at Calcutta, Bombay, Karachi and Rangoon are performed by the Field Companies R. F. (A. F. I.) at those stations, assisted by Indian ranks of Sapper and Miner Units.

Indian Territorial Force.

The Territorial Force is one of the several aspects of the Indianisation of the military services. The force is intended to cater, amongst other things, for the military aspirations of those classes of the population to whom military service has not hitherto been a hereditary profession. It is intended, at the same time to be a second line to and a source of reinforcement for the regular Indian army. Membership of the torce for this latter reason carries with it a liability for something more than purely local service or home defence. It may, in certain circumstances, involve service overseas. The force is the direct successor of the indian section of the Indian Defence Force created during the war. It has been modelled on the old militia in England. The essence of its scheme of organisation consists in training men by means of annual embodiment for a short period in successive years. By this means Indian Territoru I Force units can be given sufficient preliminary training in peace to enable them, after a comparatively short period of intensive training, to take their place by the side of regular units in war.

The Indian Territorial Force consists at present of three main categories, provincial batalilons, urban units and the university training corps units. The last are recruited from the staff and students of Indian universities. They are trained all the year round by means of weekly drills during terms and a period of 15 days in camp and are equipped with a permanent staff of British instituctors. On ceasing to belong to a university, a member of the corps is discharged. In the case of the university training corps units there is no liability to perform the liability to render actual military service. Their purpose is mainly educative, to inculcate discipline and form character. But, incidentally, they are expected to be a source of supply of both officers and men for the provincial

and urban units.

The members of the provincial battalions accept the full liability for service which has been mentioned. Seven such battalions were constituted in the first instance. The number is now eighteen and, though the unit establish-

ment has not been completely filled in all cases, the movement has already achieved a greater degree of success than might have been anticipated at so carly a stage. Although for the present the infantry arm only has been created with the addition of the I.T.F. Medical Branch, the force by law may include every other army service.

Men enrol in the provincial battalions for a period of six years, the period being reduced to four years in certain cases. On the completion of the first period they can re-enrol voluntarily for further specified periods. During his first year, every man does preliminary training for one calendar month and during every year he receives one month's periodical training. Members of urban units have only a provincial hability. 4 such units were constituted in 1928 in Bombay, Madras, and the United Provinces, one of which has since been disbanded Members enrolled for a period of 6 years and train all the year round. During his first year every man does 32 days' preliminary training, and in every subsequent year 16 days' periodical training.

The Indian State Forces.

The Indian State Forces, formerly designated "Imperial Service Troops," consist of the military forces raised and maintained by the Ruilers of Indian States at their own expense and for State service. It has been the custom in emergency for State troops to be lent to the Government of India, and the Government of India, and the Government of India have on many occasions received military assistance of great value from this source. But the rendering of such aid is entirely at the discretion of the Ruing Princes and Chiefs. Government, on the other hand, provide permanently a staff of British officers, termed "Military Advisers," to assist and advise the Ruiling Princes in organising and training the troops of their States.

After the war had ended, the Indian States, like the Government of India, undertook a military reorganisation, which in a number of cases, has already been carried out. The principal feature of the new arrangements, as adopted more or less generally, is that in future the Indian State Forces should be composed of three categories of troops, namely:

Class A.—Troops in this class are organised on the present-day Indian Army system and establishments, and, with some exceptions, are armed with the same weapons as corresponding units of the regular Indian Army.

ing units of the regular Indian Army.

Class B.—These troops consist of units which are, in most cases, little inferior in training and discipline to troops of Class A; but they are not organised on present-day Indian Army establishments. They have, as a rule, retained the system of the pre-war formations. Their standard of armament is pitched lower than that of Class A troops.

Class C.—These troops consist in the main of militia formations, which are not permanently embodied. The standard of training, discipline and armament, prescribed for this class, is generally lower than the standard prescribed for Class B troops.

Officers.

There are two main categories of officers in the Indian Army; those holding the King's Commission and those holding the Viceroy's Commission. The latter are all Indians, apart from the Gurkha officers of Gurkha battalions, and have a limited status and power of command, both of which are regulated by the Indian Army Act and the rules made thereunder Within recent years several Indians have received King's Commissions, on entry into the Indian Army through the Royal Military College, Sandhurst and the Royal Military Academy, Woolwich.

King's Commissioned officers for the Indian Army are obtained from two main sources; from

among the cadets who pass through the Royal Military College, Sandhurst, and by the transfer to the Indian Army of officers belonging to British units. The former is the principal channel of recruitment, the latter being only resorted to when, owing to abnormal wastage or for some other special reason, requirements cannot be completed by means of cadets from Sandhurst. A third source is from among University candidates. When a cadet has qualified at Sandhurst and has received his commission, he becomes, in the first instance, an officer of the Unattached List, and is posted for a period of one year to a British battalion or regiment in India, where he receives a preliminary training in his military duties. At the end of the year, he is posted as a squadron or company officer to a regiment or battalion of the Indian Army. Administrative services and departments of the army draw their officers from combatant units, as it has hitherto been regarded as essential that every officer should, in the first instance, receive a thorough grounding in combatant, duties, and acquire at first hand an intimate knowledge

The promotion in rank of King's commissiond officers of the Indian Army is regulated by a
time-scale up to the rank of Lieutenant-Colonel
but is subject also to certain professional
examinations and tests being successfully passed.
The rank of Lieutenant-Colonel is in normal
ourse attained at 26 years' service; promotion
havened this work of the subject of the state of the state of the state of the service of the state of the st

of the requirements of the combatant arms.

ourse attained at 26 years' service; promotion beyond this rank is determined by selection. Indian Officers.—One of the most momentous decisions of the Great War, so far as the Indian Army is concerned, was that which rendered Indians eligible to hold the King's commission in the army. King's commissions are obtainable by Indian gentlemen in three ways: (1) By qualifying as a cadet through the Royal Military College, Sandhurst or the Royal Military Academy, Woolwich. Examinations are held twice a year in India for the selection

of suitable candidates for admission. (2) By the selection of specially capable and deserving Indian officers or non-commissioned officers or Indian regiments promoted from the ranks or those appointed direct as jemadar. These receive their commissions after training at the Royal Military College or Academy as Cadets and qualitying in the usual way. (3) By the bestowal of honorary King's commissions on Indian officers who have rendered distinguished service, but whose age and lack of education preclude their being granted the full King's commission. The first two avenues of selection mentioned afford full opportunity to the Indian of satisfying a military ambition and of enjoying a military arreer on terms of absolute equality with the British officer, who, as a general rule, also enters the army by qualifying at Sandhuist or Woolwich. Until 1931, ten vacancies at Sandhurst and three at Woolwich were reserved annually for Indian cadets.

annually for Indian cadets.

A further measure adopted by the Government was the establishment of the Prince of Wales' Royal Indian Military College at Dehra Dun, a Government institution for the preliminary education of Indians who desire to qualify for the King's commission in the army through the Royal Military College, Sandhurst or the Royal Military Academy, Woolwich. The arrangements so far made enable a maximum of 70 boys to be in residence at the college at any one time, and the normal course of education is planned to occupy six years In February 1923, it was decided that eight units of the Indian Army should be completely Indianized. The units selected for Indianization were 7th Light Cav.lry; 18th Light Cavalry, 2nd Bh., Madras Ploneers; 4/19th Hyderabad Regiment,5th Royal Battalion,5th Mahratta Light Infantry; 1/7th Rapput Regiment (Q. V. O. L. I.), 1/14thPunjab Regiment; 2/1st Punjab Regiment.

In 1932 a considerable advance in the Indianization of the Army was made by the announcement that it was intended to Indianiza a Division of all Arms and a Cavalry Brigade. In order to implement this decision, the following units have been marked for Indianization, 3rd Cavalry, 5/2nd Punjab Regiment, 5/6th Rajputana Rifles, 5/8th Punjab Regiment, 5/10th Baluch Regiment, 5/11th Sikh Regiment, 4/12th Frontier Force Regiment, and 6th Royal Battalion 13th Frontier Force Rifles, in addition to units of Indian Artillery, Engineers, etc., together with the usual complement of ancillary services, to make up a complete Division The Indian Regiment of Artillery has been formed on the 15th January 1935 and the first unit of this new corps has been raised as a field artillery brigade. This brigade is dessignated "A" Field Brigade, Indian Artillery.

In order to train officers for the Indian Army of the future, the Indian Military Academy at Dehra Dun was opened in October 1932 It will provide officers for all arms cavalry, infantry, artillery and signals. The first batch of officers passing out of the Academy received their commissions on the 1st February 1935.

Training Institutions.

The following institutions exist in India for the higher training of military personnel and for the education of instructors for units:— Staff College Quetta

Staff College, Quetta. Senior Officers' School, Belgaum. School of Artillery, Kakul. Equitation School, Saugor.

Small Arms Schools (India), at Pachmarhi

and Ahmednagar

Army Signal School, Poona.
Royal Tank Corps School, Ahmednagar.

Army School of Education, Belgaum.
Army School of Cookery, Poona.
Army Veterinary Schools, Ambaia and Poona.

Indian Army Service Corps Training Esta-blishment, Rawalpindi.

Indian Army Ordnance Corps School of Instruction, Kirkee. The object of these Schools is to ensure to all

the units throughout the army a constant supply of officers, warrant officers, non-commissioned officers and men, provided with a thorough up-todate knowledge of various technical subjects, and with the ability to pass on this knowledge.

Following the procedure adopted at Home, the Small Arms and Machine Gun Schools were amalgamated in February 1927. Instruction in the rifle, light gun, etc., is carried out at Pachmarhi

and in the machine gun at Ahmednagar.

The King George's Royal Indian Military Schools at Jhelum, Juliundur and Ajmere, and the Kitch ener College, Nowgong, also exist for the education of the sons of Indian soldier, with a view to their finding a career in the Indian Army. The latter at present assists in the training of Indian N.C.Os. for promotion to Viceroy's Commission. The Prince of Wales's Royal Indian Military College at Dehra Dun exists for the preliminary education of Indians who desire to qualify for the King's Commission in the Army through the Indian Military Academy.

Army in India Reserve of Officers — Previous to the Great War there existed what was called the Indian Army Reserve of Officers, a body of trained officers available to replace casualties in the Indian Army. The war proved fully meet requirements and in 1922 the Army in India Reserve of Officers was constituted.

The revised Regulations for the A. I. R. O. published in 1934 provi le that the following gentlemen

strength of the Reserve on the 1st January 1936 was 781.

The Fighting Races. —The fighting classes that contribute to the composition of the Indian Army have hitherto been drawn mainly from the north of India, but the experiences of the great war have caused some modifications in the opinions previously held as to the relative value of these and other fighting men. The numbers of the various castes and tribes collisted in the Army have since the war undergone fluctuations, and it is not possible at present to give exact information as to their proportions. Previous to the war the Sikhs contributed very large numbers both to the cavalry and infantry, and the contribution of the Gurkhas was also large. The Sikhs, who inhabit the Punjab originated in a sect founded near Inhore by a peasant in the early part of the sixteenth century and in the course of a hundred years grew into a formidable militant power. Muhammadans of various races contribute a still larger proportion to both the cavalry and infantry. These are drawn both from the north and the south of India, as well as from beyond the They are all excellent fighting men, Frontier. hardy and warlike, who have furnished soldiers to all the great powers of India for many hundreds of years. As cavalry the Muhammadans are perhaps unequalled by any other race in the East, being good horsemen and expert men-at-arms

Next in point of numbers are the Gurkhas of Nepal, of whom there are twenty complete battalions, which during the war were considerably increased. As fighters in the hills they are unsurpassed even by the Pathans in the North-West Frontier, but the Garhwalis and Kumaonis are equally good mountaineers.

The professional military caste of India from time immemorial has been the Rajput, inhabit-ing not only Rajputana but the United Provinces and Oudh Of fine physique and martial bearing, these warriors of Hindustan formed the backbone of the old Bengal Army, and have sustained the English flag in every campaign in the East. Their bigh caste and consequent prejudices in no respect interfere with their marissued in 1934 provi to that the Floriowing genderical may be granted commissions in the Beserve:—

(1) Ex-Officers who, having held King's commission in any Branch of His Majesty's British, Indian Rajputs, good and gallant soldiers, who have or Dominion Forces, either naval, military (includ-proved themselves equal to any other troops or nominon roces, ether havai, initiary (incade) proved themselves equal to any other troops ing the Auxiliary Force(India) and Indian Territo- on the field of battle and have established an rial Force) Marine or Air, have retired therefrom imperishable record in the war both in Europe and are no longer liable for service therein, and and in the East. The two battalions which who are resident in India, Burma or Ceylon. The Jats are a fine and warlike race of Hindus found in the Delhi and Rohtak districts and adjoining territory. It was these people who held out so bravely at Bharatpur and They have proved themselves good soldiers on the battlefields of Europe. Dogras are good and steady soldiers appointment to the Army in India Reserve of found in the hilly districts of the Punjab. They fought well in Flanders and in Mesopctamia.

Among those who have rendered signal and gallant service in the war are the Mahrattas of the Deccan and the Konkan, who have revived thereputation held by their race in the days of Shivaji, the founder of the Mahratta Empire. It is probable

In addition to the castes that have been mentioned, other caste men from the south and other parts of India have filled the ranks of the

During the war the Victoria Cross was awarded for conspicuous gallantry to 2 Indian officers, 4 non-commissioned officers and 6 other ranks of the Indian Army.

The Military Cross was awarded to 96 Indian Officers for distinguished service rendered during the Great War and to 3 Indian Officers for service in Waziristan.

A large number of Indian Officers and men were also granted Foreign decorations.

of the Indian Army during the war are review- seas was 175,000.*

Sappers and Miners, and done their duty well ed. His Excellency gives in it the following in every campaign in which they have been figures showing the extent of India's contribution in terms of men. On the outbreak on war, the combatant strength of the Indian Army, including reservista, was 194,000 Indian ranks; enlistments during the war for all branches of the service amounted to 791,000, making a total combatant contribution of 985,000. Of this number, 552,000 were sent overseas. As regards non-combatants regards non-combatants, the pre-war strength was 45,000; an additional 427,000 were enrolled during the war and 391,000 were sent over-seas. The total contribution of Indian personnel has thus been 1,457,000, of whom 943,000 Summary of India's Effort in the War—have served overseas. Casualties amounted In a despatch by the Commander-in-Chief to 106,594, which include 36,696 deaths from published in July, 1919, the whole operations all causes. The number of animals sent over-

Budget Expenditure on National Defence.

A part of the Defence expenditure on the Indian Budget is incurred in England, the nature of such expenditure being indicated in nature of such expenditure being indicated in the detailed Tables of Army, Navy and Military Engineer Services expenditure. This expenditure is met by transfer of funds from India From the 1st April 1920 to the 31st March 1927, the accounts were prepared on the basis of the rate of 2s per rupee for the conversion of English sterling transaction into rupees. From the 1st April 1927 the accounts

are being prepared at the standard rate of 1s 6d. per rupee.

As a rule, the receipts collected by the various departments are not set off against exrious departments are not set off against expenditure as appropriations in aid, but are shown separately on the receipts side of the budget. This is especially the case with the receipts of the Military Departments, which amount to considerable sums.

The Provincial Governments incur no expenditure for Military and the considerable sums.

penditure for Military purposes.

The amounts expended in England on effective services consist of such charges as payments to the War Office and Air Ministry in London in respect of British Forces serving in India, the transport to India of these forces, and payments on account of stores taken to India by British Forces, educational establishments in England for Indian Services, leave pay of Indian and British service Officers on the Indian Establishments, purchase of imported stores, etc. The expenditure on non-effective services consists of payments to the War Office in London for retired pay to British forces for services in India and to non-effective and retiredofficers of the Indian Service, and of various gratuities.

Although a sum of Rs. 449 millions only has been allotted in the Budget for 1935-36 to meet the net expenditure on Military Services Rs. 499 millions (including receipts) will be available for expenditure under the heading "Military Services" made up of Ra.386-5 millions for expenditure in India and Rs. 112-5 millions in England.

The gross working expenses of military establishments, such as bakeries, pasture and dary farms, army clothing factories, and storage depots, army ordnance factories and base mechanical transport workshops are included in the Budget.

The division of expenditure on Mulitary Engineer Services between India and England is as shown below:--

contribution towards the recruiting and training an average annual sum of roughly, £631,000 expenses in England of the British troops and airmen who serve for a part of their time in India The Tribunal has also examined India's counterclaim to a contribution towards the cost of her defence expenditure.

The Tribunal was an advisory body which met in November with instructions to report to the Prime Minister The Chairman Sir Robert Garian, until recently Solicitor-General in the Commonwealth of Australia Lord Tomlin and Lord Dunedin were nominated by His Majesty's Government, and Sir Shadi Lal, Chief Justice of the Punjab High Court, and Sir Muhammad Sulaiman, the Senior Puisne Judge of the High Court of Allahabad, by the Government of India.

The matters on which the Tribunal will make recommendations have been subjects of controversy for many years, and, as was recognized in the Report of the Simon Commission, the issue bears upon the great constitutional problem now under consideration. One reason for the connexton is the heavy burden of the cost of defence upon India. Taking the Central and Provincial Governments together, it amounts to 29 per cent. of the total expenditure; and if the Central Government alone is considered it amounts to 54 per cent. These calculations take account of net receipts only from semi-commercial undertakings such as railways, posts, and telegraphs.

Cost of the Army —A Tribunal was set up a capitation rate of £10 on every British soldier in 1932 to investigate the amount of India's sent to India was fixed. This worked out at

In 1870 objections were raised by both sides to the £10 rate, and until 1878 India made payments on account averaging £440,000 per annum. An Act of Parliament confirmed these amounts as full payment, with the effect of writing off outstanding War Office claims. In 1890 the capitation rate was fixed at £7 10s Meanwhile the British forces in India had been substantially increased, and the altered rate represented an annual expenditure of about £734,000. A committee presided over by Lord Justice Romer was appointed in 1907. It held that the capitawas appointed in 1907. It here that one captes-tion charge was justified in plunciple. In the following year the Secretaries of State for India and War (Lord Morley and Lord Haldane) agreed to a compromise whereby the rate was raised to £11.8s, the annual charge on India being thereby increased by about £300,000. During the War India met this liability as part of her normal military expenditure, and all extraordinary costs arising from the employment of Forces from India in the various theatres of War were met by the British Exchequer, in accordance with decisions of Parliament.

The great increases in rates of pay and cost of equipment lod to the capitation rate being raised in 1920 to £28 10s Since 1924 India has paid on account each year £1,400,000, compared with War Office claims, backed by elaborate details which amounted in 1926-28 to approximately £4,500,000 and would still exceed Capitation payments.—When, after the the provisional payments by about £300,000 Mutiny, the troops of the East India Company annually. The Government of India has disputed were amalgamated with those of the Crown the bill.

The Strength of the Army.

BRITISH TROOPS.

The following table gives the average strength of British troops, and the main facts as regards their health for the quinquennial periods 1910-14 and 1915-19 and for the years 1920 to 1929:—

THE VICTORIA CROSS.

The announcement, made at the Delhi Durbar on going out to his Adjutant, and offered to in 1911, that in future Indians would be eligible trawl back with him on his back at once. When for the Victoria Cross, gave satisfaction which this was not permitted, he stripped off his own was increased during the War and afterwards by clothing to keep the wounded officer warmer the award of that decoration to the following :-

Subadar (then Sepoy) Khudadad Khan, 129th Baluchis.—On 31st October 1914, at Hollebeke, Belgium, the British Officer in charge of the detachment having been wounded, and the other gun put out of action by a shell, Sepoy Khudadad, though himself wounded, remained working his gun until all the other five men of the gun detachment had been killed. been killed.

Naick Darwan Sing Negi, 1-39th Garhwal Rifles.—For great gallantry on the might of the 23rd-24th November 1914 near Festubert, France, when the Regiment was engaged in retaking and clearing the enemy out of our trenches and, although wounded in two places in the head, and also in the arm, being one of the first to push round each successive traverse, in the face of severe fire from bombs and rifles at the closest range.

bravery and great ability at Ypres on 26th front of and covering again our new line with April 1915, when he led his platoon with in 150 yards of the enemy's entrenched posigreat gallantry during the attack, and after thom. He beat off three counter-attacks, and wards collected various parties of the Regi. worked his gun single-hand d after all his men, ment (when no British Otheers were left) and except two belt-fillers, had become casualties. 55th kept them under his command until the retirement was ordered. Jamadar Mir Dast subsequently on this day displayed remarkable courage in helping to carry eight British and Indian Officers into safety, whilst exposed to very heavy fire.

Rifleman Kulbir Thapa, 23rd Gurkha Rifles-For most conspicuous bravery during operations against the German trenches south of Mauquissart. When himself wounded, on the 25th September 1915, he found a badly wounded soldier of the 2nd Leicestershire Regiment behind the first line German trench, and though urged by the British soldier to save himself, he remained with him all day and night. In the early morning of the 26th September, in misty weather, he brought him out through the German wire, and, leaving him in a place of comparative safety returned and brought in two wounded Gurkhas one after the other. He then went back in broad daylight for the British soldier and brought him in also, carrying him most of the way and being at most points under the enemy's fire the way

Havildar (then Lance-Naick) Lala, 41st Dogras.—Finding a British Officer of another regiment lying close to the enemy which he himself had made, and in which he had aiready bandaged four wounded to engage an enemy machine gun which had nen. After bandaging his wounds he heard calls from the Adjutant of his own Regiment who was lying in the open severely wounded. The enemy were not more than one hundred yards shot immediately. Without a moment's hesidistant, and it seemed certain death to go out tation Karan Bahadur pushed the dead man in that direction, but Lance-Najk Lala insisted

and stayed with him till just before dark when he returned to the shelter. After dark he carried the first wounded officer back to the main trenches, and then, returning with a stretcher carried back his Adjutant. He set a magni-ficent example of courage and devotion to

Sepoy Chatta Singh, 9th Bhopal Infantry,-For most conspicuous bravery and devotion to duty in leaving cover to assist his Commanding Officer who was lying wounded and helpless in the open. Sepoy Chatta Singh bound up the officer's wound and then dug cover for him with his entrenching tool, being exposed all the time to very heavy rifle fire. For five hours until nightfall he remained beside the wounded officer shielding him with his own body on the exposed side. He then under cover of darkness, went back for assistance and brought the officer into safety.

Naick Shahamad Khan, 89th Punjabis.-For Subadar (then Jamadar) Mir Dast, most conspicuous bravery. He was in charge of a the Coke's Rifles.—For most conspicuous machine-gun section in an exposed position in except two belt-fillers, had become casualties. For three hours he held the gap under very For three hours no near the gap under very heavy fire while it was being made secure. When his gun was knocked out by hostile fire he and his two bet-fillers held their ground with riffes till ordered to withdraw. With three men sent to assist him he then brought back his gun, ammunition, and one severely wounded man unable to walk. Fin-ally, he himself returned and removed all remaining arms and equipment except two shovels. But for his great gallantry and determination our line must have been penetrated by the enemy.

> Lance-Dafedar Govind Singh, 28th Cavalry. -For most conspicuous bravery and devotion to duty in thrice volunteering to carry messages between the regiment and brigade headquarters, a distance of 11 miles over open ground which was under the observation and heavy fire of the enemy. He succeeded each time in delivering his message although on each occasion his horse was shot, and he was compelled to finish the journey on foot.

> Rifleman Karan Bahadur Rana, 23rd Gurkha Rifles. - For conspicuous bravery and resource in action under adverse conditions, and utter contempt of danger during an attack. He with

and knocked out the enemy machine gun crew. to him before he died. His valour and imitative Then switching his fire on the enemy bombers were of the highest order. and riflemen in front of him, he silenced their fire. He kept his gun in action, and showed the greatest coolness in removing defects which had twice prevented the gun from firing. He did magnificent work during the remainder of the day and when a withdrawal was ordered assisted with covering fire untilthe enemy was close to him. He displayed throughout a very high standard of valour and devotion to duty.

Ressaldar Badlu Singh, 14th Lancers attached 29th Lancers.—For most conspicuous bravery and self-sacrifice on the morning of the bravery and self-sacrifice on the morning of the 23rd September 1918, when his squadron devotion and bravery "quite beyond all charged a strong enemy position on the west praise" in Waziristan on 10th April, 1921. He bank of the River Jordan, between the river received a severe gunshot wound in the chest and Kh. es Samariveh Village. On nearing while serving a Lewis gun, and when all the the position Ressaldar Badlu Singh realised havildars had been killed or disabled he strugthat the squadron was suffering casualties gled to his feet, called to his assistance two men, from a small hill on the left front occurred by and charged and recovered the gun restarting

and heavy fire from both flanks, he opened fire machine guns and infantry had surrendered

Rifleman Gobar Sing Negi, 2nd Battalion, 39th Garhwal Rifles.—For most conspicuous bravery on 10th March 1915 at Neuve Chapelle. During an attack on the German position he was one of a bayonet party with bombs who entered their main trench, and was the first man to go round each traverse, driving back the enemy until they were eventually forced to surrender. He was killed during this engagement.

from a small hill on the left front occupied by and charged and recovered the gun, restoring machine guns and 200 infantry. Without it to action. He refused medical attention, the slightest hesitation he collected six other insisting first on pointing out where the other ranks and with the greatest dash and an entire wounded were and on carrying water to them.

disregard of dauger charged and captured the boltion, thereby saving very heavy casualties these wounded he shielded him with his body to the squadron. He was mortally wounded and he submitted to medical attention hunself on the very top of the hill when capturing one only after he was exhausted through three hours' of the machine guns single-handed, but all the continual effort and by loss of blood.

THE EAST INDIES SQUADRON.

Since 1903 a squadron of the Royal Navy, squadron had considerably improved. known as the East Indies Squadron, has been maintained in Indian waters. It has natus second class cruiser which had been flagship, and another, second class cruiser replaced the In 1903 the squadron consisted of one second class and two third class cruisers, and recond class and two third class cruisers, and remained at this strength until 1910: when one second class cruiser was withdrawn and two smaller vessels substituted, and three cruisers were lent from the Mediterranean to assist "Colombo," Cruiser, 7,580 tons; "Enterprise were lent from the Mediterranean to assist "Colombo," Cruiser, 4,200 tons); Sloops, in the suppression of the arms traffic in the "Shorcham," "Bideford," "Fowey," and Gulf. By 1913 the position of the East Indies

The present composition of the East Indies Squadron (Fourth Cruiser Squadron)

India contributes £100,000 a year towards naval expenditure and approximately £3,000 a year on account of indian Transport Service performed by the Admiralty, and also maintains the Royal Indian Navv.

India's Naval Expenditure.

Since 1869 India has paid a contribution of varying amounts to the Imperial Government in consideration of services performed by the Royal Navy. Under existing arrangements which date from 1396-7 the subsidy of £100,000 a year is paid towards the upkeep of certain ships of the East India Squadron, which may not be employed beyond prescribed limits, except with the consent of the Government of India. India's total naval expenditure is well under half a million soul. half a million pounds.

The question of a new distribution of the burden of the cost of Imperial Naval defence was discussed at the Imperial Conference in London in October—November 1926. The matter appeared to be one on which the delegates could form no new decision without further consultations in their respective capitals and no resolution was passed.

The Royal Indian Navy consists of a Depot Ship, 4 Sloops, 2 Patrol vessels and a Survey vessel. A fifth sloop has just been completed in England and will replace one of the Patrol vessels.

ROYAL INDIAN NAVY.

The Royal Indian Navy (The Sea Service as a combatant service. The Government of under the Government of India) traces its India in 1920 obtained from the Admiralty the erigin so far back as 1612 when the East India services of Rear-Admiral Mawby as Director, Company stationed at Surat found that it was necessary to provide themselves with armed vessels to protect their commerce and settlements from the Dutch or Portuguese and from the pirates which infested the Indian coasts. The first two ships, the Dragon and Hoscander (or Oslander), were despatched from Lngland in 1612 under a Captain Best, and since those days under slightly varying titles and of various strengths the Government in India have always maintained a sea service.

The periods and titles have been as follows:-

	1612-1
••	1686-1
	1830-1
	1863-1
	1877-1
	1892.
	1934.
	••

India's Naval Force has always been most closely connected with Bombay, and in 1668 when the E. India Co. took over Bombay, Captain Young of the Marine was appointed Deputy Governor. From then until 1877 the Marine was under the Government of Bombay, and although from that date all the Marine Es-tablishments were amalgamated into an Imperial Marine under the Government of India, Bombay has continued to be the headquarters and the official residence of the Flag Officer Commanding.

During the War 1914-1918 Royal Indian Marine Officers were employed on many and various duties Royal Indian Marine Ships "DUFFERIN," "HARDINGE," "NORTHEROOK," "LAWRENCE," "DALHOUSIE" and "MINTO" had their guns mounted and served as Auxiliary Cruisers. Officers also served in the Boyal Navy in the Grand Fleet, Mediterranean North Sea, North Red Sea and Caspian Sea Fleets.

In addition to transport duties in Indian Ports, Officers were sent to Marseilles, East Africa and Egypt for such duties, and on the entry of Turkey into the War were employed on duties towing and manning River Craft and Barges to and in Mesopotamia, and it was necessary to enlist a number of Temporary Officers, Warrant Officers and mon to the numbers of approximately 240, 60 and 2,000 respectively for these and other duties.

Reorganisation Schemes.—After the War the Government of India asked Admiral of the Fleet Lord Jellicoe, who was visiting India, to draw up a scheme for the reorganisation of the Service. His valuable suggestions were unfortunately too ambitious for Indian finances and could not be accepted.

Shortly afterwards the Esher Committee arrived in India to report on the Indian Army and although the R.I.M. was not included in their terms of reference, they strongly recommended that the R. I. M. should be reorganised in peace and war then ceased to exist.

R.I.M., to draw up a scheme of reorganisation within limited lines. His scheme, however, was not adopted, and Admiral Mawby resigned his appointment.

The R.I.M. then fell upon hard times; money was scarce, the report of the Inchcape Committee necessitated drastic retrenchments, and the working of the Montagu-Chelmsford reforms resulted in the Local Governments having to defray the cost of the work of R. I. M. ships on their various stations, on lighthouse duties, transport work, carrying of officials, etc. The 686 Local Governments were naturally inclined to think that if they had to pay they would like to have a say in the management, and that 1863 if the work could be done cheaper locally, they should arrange to carry out the duties them-1892 recommended that the three large troopships should be scrapped and all trooping carried out under contract, which would have left the Marine with only the Survey Department and the Bombay Dockyard.

A Combatant Service.—Happily for the Service, however, the Government of India in 1925 appointed a Departmental Committee under the Charmanship of General Lord Rawlinson, in his capacity of Minister of Defence and Member of Council in charge of the Marine Portfolio, to submit a scheme for the reorganisation of the Service as a combatant force. This Committee recommended that the Service should be reorganised as a purely combatant Naval Service with the title of Royal Indian Naval Service with the title of Royal Indian Navy, with a strength in the first instance of 4 armed sloops, 2 patrol vessels, 4 mine-sweeping trawlers, 2 surveying ships and a depot ship, the Service in the first instance to be commanded by a Rear-Admiral on the active list in the Royal Navy. The scheme was accepted by the Indian and Home Governments, and the necessary Act to permit India to maintain a Navy was passed through both Houses of Parliament. Houses of Parliament.

To effect this change in the title, it was necessary to draw up a new Indian Naval Discipline Act and this had to be passed through the Assembly and Council of State in India.

In February 1928, the Bill was introduced but failed to pass in the Assembly by a narrow margin of one vote. In February 1934, the Bill was re-introduced to the Assembly with certain minor amendments but in response to a plea for circulation, the Government circulated the Bill.

In August, the Bill was re-introduced and passed by the Assembly and Council of State. On 2nd October 1934 the Royal Indian Navy was inaugurated, the historic ceremony taking

Appointments.

In addition to the regular appointments in the ships of the Royal Indian Navy, and in H. M. I. N. Dockyard, the following appointments under the Government of India, Commerce Department, are held by the officers of the Royal Indian Navy :--

BOMBAY.

Principal Officer, Mercantile Marine Department, Rombay District, Nautical Surveyor, Mercantile Marine Department, Bombay District, Principal Engineer and Ship Surveyor, 2nd 3rd and 4th Engineer and Ship Surveyors,

CALCUTTA.

There were two Royal Indian Marine Dock-yards at Bombay and at Calcutta, the former ment, Calcutta District; Nautical Surveyor,

Principal Officer, Mercantile Marine Department, Madras District, and Engineer and Ship Surveyor.

BURMA.

Principal Officer, Mercantile Marine Department, Rangoon District, Nautical Surveyor, Mer-cantile Marine Department, Rangoon District, and Engineer and Ship Surveyor, Rangoon.

KARACHI.

Principal Officer, Mercantile Marine Department, Karachi District.

Principal Officer, Mercantile Marine Department, Aden District.

CHITTAGONG.

Nautical Surveyor and Engineer and Ship Surveyor.

PORT BLAIR.

Engineer and Harbour Master.

Agriculture.

As crops depend on the existence of plant | tion and manning, broadly speaking there food and moisture in the soil so the character of the agriculture of a country depends largely on its soil and climate. It is true that geograplucal situation the character of the people and other considerations have their influence which is not inconsiderable, but the limitations in posed by the nature of the soil and above all by the climate tend to the establishing of a certam class of agriculture under a certain given set of conditions

The climate of India, while varying to some extent in degree, in most respects is iemaikably similar in character throughout the coun-The main factors in common are the monsoon the dry winter and early summer months, and the intense heat from March till June. These have the effect of dividing the year into two agricultural seasons the Kharif of Monsoon and the Rubi or winter season, each bearing its own distinctive crops Between early June and October abundant rams fall over the greater part of the continent while the winter months are generally dry, although North-Western India benefits from showers in December and January The south of the Pennisula, and especially the Madras Presidency however is more tully tropical especially in the south, and depends mainly on the N -E monsoon, here the two crop—seasons can hardly be said—to exist The distribution of the rainfall throughout the year, which is of considerable importance to agriculture, is none too favourable, but is not quite so bad as is often represented. The rainfull is greatest at what would otherwise be the hottest time of the year, i.e. und-summer and when it is most needed should be remembered that in a hot country intermittent showers are practically valueless as evaporation is very rapid. Heavy rainfall concentrated in a limited period, though it has its drawbacks and demands a special system of agriculture, has many advantages in hot

Soils, -- Four main soil types can be recoguised in India eiz., (1) the Red soils derived from rocks of the Archman system which charactense Madras, Mysore and the South-East of Bombay and extend through the East of Hyderabad and the Central Provinces to Oussa, Chota Nagpur and the South of Bengal (2) The black cotton or regar soils which over he the Deccan trap and cover the greater part of Bombay, Berai and the Western parts of the Central Provinces and Hyderabad with extensions into Central India and Bundelkhand. The Madras requr soils though less typical are also important (3) The great alli-yid plains, agriculturally the most important fret in budia as well as the most extensive mainly the Indo-Gangetre Plain embracing Sind horthern Rajputana most of the Punjab, the bleps of the United Provinces, most of bihar and Bengal and half of Assam (4) The laterite soils which form a belt round the Pennisula and extend through East Bengal into Assam and Burma

are few soils in the world more suited to intensive agriculture so long as the water supply is assured. The other soils are less tractable and call for greater skill in management and are less adapted to small holdings, of these the regur soils are the most valuable

Agricultural Capital and Equipment.— India is a country of small holdings and the com-monest type is that which can be cultivated with one pair of bullocks under local conditions. Large holdings are practically miknown, and are mainly confined to the planting industries - Farning is carried on with a minimum of capital there being practically no ontlay on fencing, and very little on buildings or implements. Miny causes militate against the accumulation of capital and agricultural indebtedness is heavy and the interest on loans high - Great progress has been made by the co-operative circlit movement during the last twenty years. There are now 105 083 Co-operative Societies in India with 4,304 309 members and a working capital of nearly 96 crores of tupees. Some 90 per cent of these Societies are concerned with the financing of agriculture. Not only have these societies brought cheaper credit to the cultivator but they have striven to inculcate the lesson that theap credit is only valuable it applied to productive purposes and have encouraged thrift

Equipment. - Practically all cultivation is done by bullocks and the capacity of these as draught animals varies from district to district as well as depending the on cultivator's individual circumstances. The best types in common use are capable of handling what would be considered as light single-horse (implements in Europe In those tracts where urngation is from wells bullocks are also used for drawing water, they also drive the sugarcane crusher, and tread out the grain at harvest, and they are still almost the sole means of transport in rural areas His implements being tow, a cultivator's bullocks form by far the most important item of his movable property

Implements are made of wood although ploughs are usually typped with from points, and there is a great similarity in their shape and general design. Iron ploughs were bring introduced in large numbers in the decade tollowing the war, but the fall in the prices of agricultural commodities in recent years has lessened the demand tor these implements. The levelling beam is used throughout the greater part of the country in preference to the harrow and tolk; and throughout Northern India the plough and the levelling beam are the only implements possessed by the ordinary cultivator

On black cotton soils the commonest implement is the bakhar, a simple stirring implement with a broad blade Seed drills and drill hoes are in use in parts of Bombay Madras and the Central Provinces, but throughout the greater part of the country the seed is either broadcasted or ploughed in Hand implements consist of various sizes of hors, the best known The great alluvial plains are characterised by of which are the kodah or spade with a blade set case of cultivation and rapid response to irrigation and rapid response to irrigation.

and simple reapers and these, like iron ploughs, are likely to become popular when conditions improve. Even motor tractor ploughs are now estimated to number hundreds and a few steam ploughing sets are at work reclaiming land from deep-rooted grasses.

Cultivation.—Cultivation at its best is distinctly good but in the greater part of the country there is plenty of room for improvement. As in any other country success in agriculture varies greatly with the character of the people depending largely as it does on thrift and industry. In most places, considering the large population, cultivation is none too good. Agriculture suffers through lack of organization and equipment Two economic factors tend to keep down the standard of cultivation. Holdings are not only small but fragmented and the Indian laws of inheritance both perpetuate and intensify this evil. Very definite attempts are now being made in several provinces and states to amend matters and consolidate holdings but the process is necessarily slow. Secondly, cultivators rarely live on or near to their holdings but congregate in villages. The need for mutual protection is less than formerly and though tradition dies hard sub-villages are now springing up in many places.

For *labi* crops which demand a fine seed-bed preparatory tillage consists mainly of repeated treatments with the indigenous plough (or on black soils the bakhar) which serves the purpose of plough, harrow and cultivator, combined with applications of the levelling beam. Crude as these implements are, they produce in Northern India a surface mulch and moist sub-soil which is the aim of all dry-farming operations. For hharif crops the preparation is much less thorough as it is essential to sow without delay. Manure is generally applied to more valuable crops like sugarcane, cotton, tobacco, etc Seeding is either done broadcast or by drilling behind a worden plough or drill Thinning and spacing are not uearly so well done as they might be, and intercultivation is done as they might be, and intercentivation is generally too superficial. Harvesting is done by sickle where the crops are cut whole, and there is little waste involved. At their best the ryot's methods are not ineffective but being uneconomical of both cattle and management of the control of the cattle and management of the cattle and the cattle an power, they are seldom carried out fully. The use of simple improved implements and of machines which lessen the strain on the bullocks, which the agricultural department is steadily fostering, is an important factor in raising the general standard of agriculture.

Irrigation .- The concentration of the principal rainfall in less than a third of the year, which is not the sowing period of the rabi crops, places a very definite limit on the yield winds increased attention to the better utilization of can be obtained from the principal cereal crops. Some other crops, e.g., sugarcane, can hardly be grown indeed without supplementary watering. With adequate irrigation the yield from the principal grain crops in Northern India is rapidly replacing the old-fashioned mhotea.

not use his feet in digging, and the khurpi doubled even in areas where the monsoon is cr small hand hoe. Of harvesting machinery generous, whilst in the great canal colonies there is none; grain is separated either by treadand in Sind barren desert has become fertile ing out with oven or beating out by hand, and land. The Indian canal system is by far the winnowing by the agency of the wind; cultivators largest in the world. In 1932-33 the total have come to recognize the efficiency of winnowers length of the main and branch canals and distributaries amounted to some 75,000 miles irrigating an area of 33 million acres, and the value of crops irrigated from Government works was estimated at about 87 crores. It has been calculated that when works under has been calculated that when works under construction are completed, and when the various new canals are developed fully, the irrigated area will probably reach 50 million acres. The protective effect of the canals in many areas is no less important than the enhanced yield. Protectiveirrigation works have made agriculture stable instead of precarious in many districts. The Indian canals are of two types—perennial and inundation—and the trend of irrigation practice is to replace the latter by the former wherever possible. The great perennial canals in the North of India draw their supply from snow-fed rivers; the inundation canals run only when the rivers rise with the melting of the snow in April-May and must close when supplies fall at the end of the monsoon. Other canals depend for their supply during the dry part of the year on water stored behind great dams thrown across suitable gorges and are in consequence less dependable than the larger snow-fed systems. Water rates are levied on the area of irrigated crops natured so that Government bears part of the risk of failure of crops. Different rates are charged for different crops and vary somewhat in different parts of India; rates are also lower when the water has to be lifted than when flow irrigation is given.

The Madras and Bombay presidencies possess some of the most spectacular irrigation schemes in the world. The Cauvery—Mettur irrigation system inaugurated in 1934 is considered to be the biggest in the British Empire and the be the biggest in the British Empire and the largest single block masonry reservoir in the world, with a storage capacity of 93,500 million cubic feet. This project, together with the Kanniambadi project in Mysore, is said to bring into productive use about 80 per cent. of the flow of the Cauvery river besides serving as a great moderator of floods. The Wilson Dam at Bhandardara, impounding 272 feet of water, is far and away the highest dam in India, whilst the Sukkur Barrage in Slad across the Indus irrigates a desert whose area far exceeds that of any other scheme conceived by engineers. any other scheme conceived by engineers.

Irrigation from Wells.—About one quarter of the total irrigation of the country is got from lifting water from wells ranging in depth from a few feet to over fifty feet. Their numbers have greatly increased in recent years largely through Government advances for their construction. The recurring cost of this form of irrigation has, however, greatly increased owing to the high price of draught cattle and the increasing cost of their maintenance.

All agricultural departments are now giving places a very definite limit on the yield which increased attention to the better utilisation of can be obtained from the principal cereal crops. underground water supplies, existing wells being Tank irrigation is common in Central and Southern India. Large quantities of rain water are stored in lakes (or tanks) and distributed during the drier seasons of the year. Often the indirect effect of the tank in maintaining the sub-soil water level is as important as the direct irrigation.

Manures — Although the number of cattle maintained in India is very high and indeed excessive, there is everywhere a shortage of farmyard manure. This is partly due to the small use of bedding, for which straw can ill be spared, and to the keeping of cattle in the open, but mainly to the use of dung as the principal source of village fuel. Hence the supply of organic matter to Indian soils is deficient. Unfortu-nately the Indian cultivator does not possess the skill of the Chimaman in the making of composts and much valuable manurial material is wasted in every Indian village and to the detriment of sanitation. Green-manure crops are apreading slowly and the use of oil-cakes, especially castor-cake, for the more valuable crops like sugarcane and tobacco is increasing.

The general trend of the results of experiments carried on by the various agricultural departments is to show that a better supply of organic manures is everywhere important, nitrogen is the most common limiting lactor for India as a whole, phosphatic manures are definitely advantageous in certain more limited tracts. Manuring for higher production is gradually spreading as the result of village demonstrations; at present prices of certain artificial fertilisers, notably ammonium sulphate and the newer types of soluble phosphatic manure are definitely profitable not only for tobacco, sugarcane and market garden crops but for some staple crops, but generally speaking the fall in the prices of agricultural produce has arrested progress in the use of fertilisers.

Rice.—Rice is the most extensively grown crop in India, although it preponderates in the wetter parts of the country, viz, in Bengal Bihar and Orissa, Burma and Madras, The area fluctuates slightly around 80 million acres and the yield is about 30 million tons requires for its proper maturing a moist climate with well assured rainfall. The cultivated varieties are numerous differing greatly in quavarieties are numerous dinering greatly in quality and in suitability for various conditions of soil and climate, and the people possess an intimate acquaintance with those grown in their own localities. The better qualities are sown in seed beds and transplanted in the monsoon. Broadcasted rice is grown generally in lowlying areas and is sown before the monsoon as it must make a good start before the floods arrive. Deep water rices grow quickly and to a great height and are generally able to keep pace with the rise in water level.

For transplanted rice the soil is generally prepared after the arrival of the monsoon and is worked into a puddle before the seedlings are transplanted. The land is laid out into small areas with rulsed partitions to regulate the distribution of the water supply. The seed-lings are planted either singly or in small bunches containing from 4 to 6 plants each and are simply pushed into the mud at distances of 6 to 1.2 inches near the little of the plants.

to retain rainfall or by artificial irrigation, the details varying with locality, the rice fields are kept more or less under water until the crop shows signs of ripening. The area under improved varieties of rice distributed by the agricultural departments is now well over 2 million acres. A scheme for the intensification of research on rice in all the principal rice-growing provinces financed by the Imperial Council of Agricultural Research and the Empire Marketing Board is in progress

Judia (excluding Burma) consumes more rice than she produces, the balance in the past having been provided almost entirely by Burma The year 1934-35 was marked by a phenomenal merease in the amount imported (3 94 lakis of tons as compared with 0 88 of a laki in the preceding year) and also by the fact that nearly the whole of the imports came from Siam and Freuch Indo-China, mainly in the form of broken These imports had such a depressing effect on prices in the Madras Piesidency that it became necessary to impose an import duty of 12 annas a maund

Wheat.-Wheat is grown widely throughout Northern India as a winter crop, the United Provinces and the Puniab supplying about two-thirds of the total area, and probably three-quarters of the total outturn in India. The majority of the varieties grown belong to the species Triticium vulgare. Indian wheats are generally white, red and amber coloured and are mostly classed as soft from a commercial point of view. As seen in local markets Indian wheats from the contribution of the country contribution. mercial point of view. As seen in local markets Indian wheats frequently contain appreciable quantities of other grains and even of extraneous matter due to the method of threshing employed. Wheat for export is well-cleaned and there has been great improvement in this respect of recent years. Most of the Indian wheats are soft weak wheats but there are some well known Maccaroni wheats amongst them. The largest wheat acreage of recent years was that of 1933-34, namely, 36 million acres, but the yield did not come up to the record harvest of 1930 which exceeded 104 million tons The estimated area in 1935-36 is 32'76 million acres Recent crops have averaged 9½ million tons per annum which is only slightly, it anything, above internal requirements. Exports of wheat amounted to 197,000 tons in 1930-31 but have since been nominal, Indian wheat having been well above world party and the home market protected by an import duty on foreign wheat With the development of irrigation from the Lloyd Barrage of Send and in the navier Davish, food Canal in Sind and in the newer Punjab Canal Colonies a further increase in wheat production is practically certain and, although the internal consumption of wheat will increase with the growth of population, there is likely to be an exportable surplus in the not distant an exportance surplus in the not distant future. The crop is generally grown after a summer fallow and, except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous moneoon. Rains in January and February are generally beneficial but an excess of rainfall in these months usually produces rust with a diminution of the yield. lings are planted either singly or in small on irrigated land 2 to 4 waterings are generally bunches containing from 4 to 6 plants each given. The crop is generally harvested in March and are simply pushed into the mud at distances and April and the threshing and winnowing go of 6 to 12 inches apart. Either by hunding

improved varieties of wheat is now 7 million acres. The imperial Council of Agricultural Research has recently appointed two Standing Committees to advise on problems connected with rice and wheat

The Millets .- These constitute one of the most important groups of crops in the country, supplying food for the poorer classes and fodder for the cattle. The varieties vary greatly in quality, height and suitability to various climatic and soil conditions. Perhaps the two best known varieties are Jowar (Sorghum vulgare) the great millet, and Bajra the Bulrush millet (Pennsetum typhoideum). Generally speaking the jowars require better land than the bajras and the distribution of the two crops follows the quality of the soil. Neither for jowar nor bajra is manure usually applied though jowar responds handsomely to high manuring and cultivation is not so thorough as for wheat. The crop is generally sown in the beginning of the monsoon and so it requires to be thoroughly weeded, It is often grown mixed with the summer pulses especially Arhar (Cajanus indicus—pigeon pea) and other crops, and is commonly rotated with cotton. The subsidiary crops are harvested as they ripen either before the millet is harvested or afterwards. In some provinces rate mar is also an important crop. The produce is consumed in the country

-Pulses are commonly grown through • out India in great variety and form at once the backbone of the agriculture, since even the present moderate degree of soil fertility could not be maintained without legiminous rotations, and a primary necessity in the food of a vegetarian population. The yields on the whole are fairly good, mixed cropping is common. The principal pulses are Arhar (Caganus indicus), gram (Cicer arietinum), various species of Phaseolus and Pisum.

Cotton —Is one of the most important commercial crops in India and despite the sharp fall both in quantity and values due to the trade depression raw coffon was first in the list of exports for 1934-35. The average area under cotton in the quinquennium ending 1929-30 was 26/2 million acres and the average yield 5/8 million bales. In the year following as a result of low prices, the area contracted to less than 23 million acres, but has again usen to over 25 millions in 1935-36 findian mills now consinue annually about 2 300 000 bales of Indian cotton and at present some 300,000 bales per annum of imported cotton (Egyptian, Sudan and African) of a staple longer than is produced in India. The principal export is of short staple cotton of \$\frac{b}{b}'\$ staple but there is also in normal years an export of Indian medium I'to 1 1 staple cottons such as Punjab/American and Karunganni. The area under improved varieties of cotton is now estimated to be approximately 4 million access (i) these 2.7 million acres represent long and medium staple cottons, the remainder being short staple varieties of improved yield and ginning pervarieties of improved vield and gimning per-centage. There is no Indian cotton belt, Bombay, the Central Provinces, Hyderabad, Baroda, Madias, the Punjab and the United Provinces all have important cotton tracts.

Sowing and harproducing distinct types vesting seasons are equally diverse, the former extending from May to December in different parts of the country and the latter from October to May and June. Yields vary greatly; in the best irrigated tracts the normal yield is about 200 lbs. of ginned cotton per acre and yields much above these have been recorded, whilst in the poorest unirrigated tracts 60 lbs. per acre is a good crop. Of recent years, as the result of the work of the agricultural departments and the Indian Central Cotton Committee, the quality and yield of the staple cottons has improved and also the yield and cleanliness of the short-staple tracts.

The Cotton Transport Act, the Cotton Ginning and Pressing Factories Act, the Bombay Cotton Markets Act, the C P Cotton Markets Act and the Madras (commercial crops) Market Act have all been passed at the instance of the Committee and are doing much to check adulteration and promote better marketing certain provinces legislation bas been enacted. or is under consideration, with the aim of preventing the growing of very inferior varieties and of stopping certain malpractices which affect the quality and reputation of Indian cotton Agricultural department have continued then campaign of cotton improvement apart from improvements in methos of cultivation

Exports - The exports of raw cotton from ludia by sea to foreign countries for the last 5 fiscal years (ending March 31st) were as follows (in thousands or bales of 400 lbs. each) :--

			-		
Countries	1930- 31	1931- 32	1932- 33.	1933- 34	1934- 35.
United Kungdom	281	166	167	342	347
Other parts of the Bri- tish Em pire	6	6	7	3	6
Japan	1,686	1,080	1,085	1,022	2,011
Italy .	362	183	150	261	278
France	232	81	124	163	148
China (ex- clusive of II on g- kong,etc)	606	436	134	337	142
Belgium	217	121	128	145	153

Germany	309	166	152	247	153
Other countries	121	85	64	159	148

import 325 million yards of Japanese piece goods A strenuous and apparently successful effort is being made to increase the United Kingdom's consumption of Indian raw cotton, which has more than doubled during the last

Sugarcane.—India, until recently a large importer of sugar, is one of the most important sugarcane growing countries in the world The area in 1935-36 is estimated at 4,007,000 acres as against 2,980,000 acres, the average for the guinguennium ending 1934-35. The crop is mostly grown in the submontane tracts of Northern India, more than half the area being in the United Provinces. The indi-genous hard, thin, low-sucrose canes have now largely been replaced by seedling canes of high quality mainly the productions of the Imperial Sugarcane Breeding Station, Combatore The total area under improved varieties of cane in India in 1933-34 was estimated at 2 13 million acres, representing 61 per cent. of the total In the United Provinces and Bihar and Orissa improved canes occupy more than 80 per cent of the area. The effect of the improved varieties is clear from the fact that, while the area under cane in India in 1935-36 (4 0) million acres) represents only an advance of 34 3 per cent over the quinquential average the yield (5 91 million quinquennial average the yield (5-91 million tons expressed as gin) represents an increase of 51 per cent. The protection afforded by the Sugar Industry Protection Act. of 1932 has given a stimulus to the production of sigar by modern methods. By the end of 1934-35 there were 130 sugar factories in India making prior to 1931-32 and it is expected that the season of 1935-36 will see 139 factories in opera-The total production of sugar, including that refined from gur, in 1934-35 was 679,000 tons as against 228,120 tons in 1931-32, and 684,000 tons are likely to be produced in 1935-36 Imports of sugar of all sorts in 1934-35 amounted to 223 000 tons as against 370,000 tons in 1932-33 and 901,200 tons in 1930-31. It is expected that within a few years India will not only provide her own requirements of sugar but will have a surplus for export

The Sugar (Excise Duty) Act of 1934 has imposed an excise duty of 10 as per cent on Khandasarrand Re 4-5-0 per cent on all other sugar except palmyras ugar produced in factories

Oilseeds -The crops classified under the heading are chiefly groundnuts, linseed, sesamum and the cruciferous oilseeds (rape, mustard, etc.) Although oilseeds are subject to great fluctuation in price and the crops themselves are more or less precarious by nature, they cover an immense area.

112.000 tons.

Linseed requires a deep and moist soil and is grown chiefly in the Central Provinces, Bihar and Orissa and the United Provinces. The crops is grown for seed and not for fibre and the common varities are of a much shorter habit of growth than those of Europe The yield varies greatly from practically nothing up to 500 to 600 lbs of seed per acic. It is grown largely for export. At the beginning of the century India supplied practically the whole of the world's demand for linseed, the area having gone as high as 5 million acres with a yield of 630,000 tons In recent years foreign competition, mainly from the Argentine, has contracted the market for Indian linseed and with it the area under the crop. Exports dwindled to 72,000 tons in 1932-33 as compared with the prewar average of \$79,000 tons The preference granted to Indian linseed in the United Kingdom under the Ottawa Agreement, combined with two successive short harvests in the Aigentine, helped India to regain her pre-war position in the British market in 1933-34 when Britain took 174,000 tons out of a total of 379,000 tons Exports diminished however, in 1934-35 the British takings being 109,000 tons out of a total export of 238,000 tons

Sesamum (Gingelly) is grown mostly in Pennisular India as an utumn or winter crop. In 1034-35 if occupied an area of 5.2 million acres with a yield of 404,000 tons About 10 per cent of the production is exported and the rest consumed locally

The Cruciferous Oilseeds there were 130 sugar factories in India making important group of crops in Northern India sugar by modern methods as against 31 factories; important group of crops in Northern India sugar by modern methods as against 31 factories; where they grow freely and attain a fair state of development The area under rape and mustaid, including an estimated figure for the area grown mixed with other crop is about 6½ to 7 million acres annually. Production in 1934-35 was estimated at 890,000 tons, of which 36,900 tons were exported as compared with 115,000 tons in 1932-33 Several species are grown and there are numerous local varieties large portion of the crop is crushed locally for domestic consumption

Jute.—I'wo varieties of the plant are cultivated as a crop, Capsulans and Olitorius. Jute growing is confined almost entirely to Bute growing is commed amoust emergery to Hengal, Assam, Bihar and Orissa. The crop requires a rich moist soil. Owing to river mundation this part of India receives a considerable alluvial deposit every year and the land is thus able to sustain this exhausting crop without manure. The crop is rather delicate when young, but once estabis rather deficate when young, but once established requires no attention, and grows to a great height (10 to 11 feet). Before ripening the crop is cut and retted in water. After about three weeks submersion the fibre is removed by washing and beating. The areas in 1935-36 was estimated at 1.947,000 million. Groundaut, though of modern introduction already an important crop particularly in Madras, Bombay, Burma and Hyderabad the area has not however achieved stability the secteadily from 1.5 millions acres in the ground to 8.23 millions in 19.33-34 may be seen as compared to 2,670,000 millions in the past two years production in 1935-36 was 19 millions there are second during 1935-36 was 19 millions. The victor of the three previous years, production in 1935-36 was 19 millions in the past two years, the acreage to 1935-36 being 4.70 manufactured jute exported during 1934-35 two years, production in 1935-36 was 19 millions. The yield in 1935-36 being 4.70 manufactured jute exported during 1934-35 two years, production in 1935-36 was defined in 1934-35. The total weight of raw and manufactured jute exported during 1934-35 two years are supported during 1934-35 two years. The total weight of raw and manufactured jute exported during 1934-35 two years. Although the present acreage is minch temperature of the past two years and the present acreage is minch to make the past two years. The total weight of raw and manufactured jute exported during 1934-35 two years. Although the present acreage is minch to make the past two years and the past two years and the past two years. The total weight of raw and manufactured jute exported during 1934-35 two years. Although the present acreage is minch to the past two years are previous that the past two years are previous the previous years. The year the past two years are years are year production in 1935-36 was extended to 2,670,000 millions in the past two years are year production in 1935-36 was campared to 2,670,000 millions in the past two years are year production in 1935-36 was campared to 2,670,000 millions in the past two years are his in progress to reduce it still further.

Tobacco is grown here and there all over are small, ill-fed and inefficient. Nevertheless the country chiefity, however, in Bengai, Bihar, the best Indian breeds have many ments Of Bombay, Madras and Burma. Of two variethe draught types the best known breeds ties cultivated Nicotuana Tabacum is by far the most common. Maximum crops are obtained on deep and moist alluvium soils and a high standard of cultivation including liberal manuring is necessary. The crop is only suited to small holdings where labour is plentiful as the attenholdings where labour is plentiful as the attenticn necessary for its proper cultivation is very great. The seed is germinated in seed beds and the young plants are transplanted when a few inches high, great care being taken to shield them from the sun. The crop is very carefully weeded and hoed. It is topped after attaining a height of, say, 2ft., and all suckers are removed. The crop ripens from February onwards and is cut just before the leaves become brittle. The greater part of the tobacco grown in India is intended for Hookah smoking and is coarse and heavy in flavour. Lighter and is coarse and heavy in flavour. Lighter kinds are also produced for cigar and cigarette amus are also produced for cigar and cigarette manufacture. Of recent years there has been important development in the production, in commercial quantities, of better quality cigarette tobacco both in Madras and in Bihar The exports of unmanufactured tobacco during 1934-95 amounted to 26 million lbs compared to 29 million lbs in the previous year. The most unportant market is the Hutsel. The most important market is the United Kingdom which took 9 million lbs during 1934-35. The area in 1933-34 was 1,183,000 acres with an outturn of 556,000 tons. The production in India of bright flue-cured tobacco suitable for eigarette making has increased considerably, particularly in the Guntur District of the Madras Presidency and several thousands of flue-curing barns have been installed in recent years

Livestock.—The livestock population of British India consists mainly of about 121 million cattle, 31 million buffaloes, 25 million sheep, 35 million goats and 3 million horses, mules and donkeys, and in the 51 Indian States for which fluwers are 118 for which figures are available, there are 113 million cattle and buffaloes, 28 million sheep and goats, 1 million horses, mules and donkeys and half a million camels. For draught pur-poses cattle are mainly used everywhere though male buffalo are important as draught animals in the rice tracts and damper parts of the country. Horses and mules are practically never used for agricultural purposes, For dairy purposes, the buffalo is important, the milk yield being high and the percentage of butter fat considerably above that in cow's milk. The best known breeds are the Murra buffaloes of the Punjab, the Jaffersbadi buffaloes of Kathlawar, and the Surti buffaloes of the Bombay Presidency. The cattle and buffalo population in India is abnor-

the draught types the best known breeds are the Hissar, Nellore, Amrit Mahal, Gujerat (Kankrej), Kangayam, Khengarh and Malvi; the Sahiwal (Punjab), Gir (Kathiawar), Scindi and Hansı are amongst the best milking breeds On the Government cattle-breeding forms and iron best which were and the contractions of the contractions o farms pedigree herds are being built up and from these selected bulls are issued, preference being given to special breeding areas, to villages which undertake to exclude 'scrub' bulls and where serious efforts to maintain a good strain of cow are made. Once established such breeding areas rapidly produce a supply of superior bulls for general distribution and in this way the valuable bulls from dovernment herds are used to advantage. The premium bull system is also working well in some tracts. Cattle improvement is a slow process at the best and though a start on sound lines has been made in all provinces, continued effort and persistent endeavour are essential. There is no branch of agricultural improvement where the land-owners of India could render greater service.

Dairying .- Though little noticed hitherto dairying forms a very important indigenous industry throughout India The annual cash value of dairy products has been estimated at over 800 crores of rupees and the importance of milk and darry products to the health and development of the people cannot be over-estimated Apart from liquid milk the best known products are native butter (ghee) and cheese (dahi) During recent years a considerable trade in tinned butter has sprung up and there seems to be no reason why an important industry should not be built up in other dairy products, such as milk-powder, condensed milk and casein. Pure gliee and milk can usually be procured in the villages but in towns dairy products can scarcely be bought unadulterated.

The Government of India maintain an Institute of Animal Husbandry and Dairying at Bangalore where students are given 2 year courses for the Indian Dairy Diploma but little provision has hitherto been made for the extensive industrial research into the handling and processing of milk and dairy products under Indian conditions, which is essential for the development of dalrying as a village industry This matter is now receiving the attention of the Imperial Council of Agricultural Research.

It is sufficient here to say that there is a growing recognition of the fact that as India's economic development proceeds a better balance maily high amounting to over 60 per cent. of the human population. The spread of cultivation is needed and that the raising of crops for the has diminished the grazing grounds, insufficient feeding of darry stock, instead of for sale as fodder crops are raised and many of the cattle

AGRICULTURAL PROGRESS.

Agricultural Progress—The historical aspect of agricultural development in India has been fully dealt with in the report of the Linlithgow Commission. The Famine Commission as long ago as 1866 made the first proposal for a separate Department of Agriculture but little resulted except the collection of agricultural statistics and other data with the object of throwing light on famine problems. The remine Commission as long ago as 1860 made the first proposal for a separate Department of Agriculture but stadily developed and strengthened their agricultural departments. The total nett expenditure of provincial agricultural departments now exceeds 105 lakhs rupees annually; of throwing light on famine problems. The Famine Commission of 1880 by their masterly review of the possibilities of agricultural development revived interest in the matter and their hood of 11 lakhs. proposal for a new Department for Agriculture and allied subjects in the Government of India and annea subjects in the Government of India and for provincial departments of agriculture bore fruit eventually. Dr. J. A. Voelker, Consulting Chemist to the Royal Agricultural Society, was invited to visit India and his book "Improvement of Indian Agriculture" is still a valuable reference book. In 1892 an agricultural chemist to the Government of India was appointed. Provincial Departments unity was appointed. Provincial Departments mainly concerned themselves at first with agricultural statistics but experimental farms were opened at Sadapet in 1871, Poona in 1880, Cawnpore in 1881 and Nagpur in 1883; there were various sporadic attempts at agricultural improvement but no real beginning was made until technical out no real beginning was made unto technical agricultural officers were appointed. Of these the earliest were Mollison in Bombay (subsequently Inspector General of Agriculture), Barber and Benson in Madras, Hayman in the United Provinces and Milligan in the Punjab. In 1901, the first Inspector General of Agriculture was transported and in the came were resulted. ture was appointed and in the same year an Imperial Mycologist was added followed by an Imperial Entomologist in 1903. The present departments of agriculture, however, one their existence to the foresight and energy of Lord Curzon whose famous despatch of 1903 marked the commencement of the reorganisation which took place in 1905. That scheme provided for to central research institute at Pusa, completely staffed provincial departments of agriculture with agricultural colleges and provincial research institutes and an experimental farm in each important agricultural tract. To the establishment of the Imperial Agricultural Research Institute at Pusa, Lord Curzon devoted the greater part of a generous donation of £30,000 given by Mr. Henry Phipps of Chicago to be applied to some object of public utility preferably connected with scientific research. The Indian Agricultural Service was constituted in 1906. Since that date progress has been steady and continuous. With the advent of the reforms of 1919, agriculture became a provincial transferred subject but the Gvernment of India retained responsibility for central research institutions and for certain matters connected with the diseases and pests of plants and animals. The addition of the Imperial Institute of Animal Husbandry and Dairying (with a branch farm the Wellington), the Imperial Cattlebreeding arm at karnal and the Anand Creamery enabled ve stock work to be carried out on a scale not ssible at Pusa. The Imperial Sugarcane-deeding station at Coimbatore is yet another branch of the Imperial Agricultural Research lustitute. The Bihar Earthquake

the nett annual expenditure on the Imperial Department of Agriculture is in the neighbour-

Parallel developments took place in the provision made for matters connected with animal health. The now world-famous Imperial Institute of Veterinary Research at Muktesar started in 1893 as a modest hill laboratory for research on rinderpest. It is now a fully equipped research institute which also manufactures protective sera and vaccines of which some 6 million doses are issued annually. The Civil Veterinary Department was formed in 1891 and until 1912 was under the control of the Inspector General. The departments were completely provincialised in 1919, the Government of India continuing to finance and control the Muktesar Research Institute and its branch station at Izatnagar (Bareilly).

Recent Progress .- As now constituted, the agricultural departments include a complete organisation for bringing the results of the application of science to agriculture into the village. At one end of the scale are the agricultural colleges and research institutes—at the other thousands of village demonstration plots where the effect of improved seed, methods, implements and manures is shown under the cultivators' own conditions. Intermediate links in the chain are the experimental farms, where scientific research is translated into field practice, demonstration and seed farms and seed stores. The ascertained results of the work of the agricultural department are striking enough. More than 16 million acres are known to be under improved crops—the further area due to natural spread is indeterminable. Improved methods of cultivation and manuring are steadily spreading, work is in progress on most of the major crops work is in progress of most of the imported and each year brings new triumphs. The present position has been authoritatively reviewed by the Royal Commission on Agriculture which reported in 1928. Recognising how much has already been done in the 20 years since the agricultural departments were created, the Commission also emphasised the enormous field for future work to which all witnesses had drawn their attention The agricultural departments having shown that the application of partments having shown that the application of science to Indian agriculture is a practical proposition and further that the individual cultivator can be reached and his methody improved, the problem is now to develop and intensify such work so that a general advance in agricultural practice will result. At no time has there been a greater need for co-ordinated effort directed towards the solution of agricultural problems. Only by increased effectneys are India weet the attraction caused by of can India meet the situation caused by low

prices for all agricultural commodities and the assistance to the agriculturists by providing intense competition in world markets arising better tachties for credit and for the marketing from production in excess of effective of agricultural produce A central marketing demand. The Government of India have recently work in collaboration with the special marketing announced their intention to render further istail appointed in the various provinces.

THE IMPERIAL COUNCIL OF AGRICULTURAL RESEARCH.

In Chapter III of their Report, the Royal established in each major province to work in ommission on Agriculture stated that the close co-operation with it. The advisory duties Commission on Agriculture stated that the most important problem with which they had been confronted was that of devising some method of infusing a different spirit into the whole organisation of agricultural research in India and of bringing about the realisation on the part of research workers in this country that they are working to an end which cannot be reached unless they regard themselves as partners in a common enterprise. They had found not only a lack of sufficiently close touch between the Pusa Research Institute and the provincial agricultural departments but also between the provincial departments themselves After describing the way in which similar difficulties had been overcome in Canada, the United States and Australia and dismissing as inadequate the constitution of crop committees on the model of the Indian Central Cotton Committee or the constitution of a quasi-independent governing body for Pusa on which the provincial agricultural departments and non-official interests would be represented, the Commission proposed the establishment of an Imperial Council of Agricultural Research.

The primary function of the Council would be to promote, guide and co-ordinate agricultural, including veterinary, research in India and to link it with agricultural research in other parts of the British Empire and in foreign countries. It would make arrangements for the training of research workers, would act as a clearing house of information in regard not only to research but also to agricultural and veterinary matters generally and would takt over the publication work at present carried out by the Imperial Agricultural Department The Commission proposed that the Council should be entrusted with the administration of a non-lapsing fund of Rs. 50 lakhs to which additions should be made from time to time as financial conditions permit. Its Chairman should be an experienced administrator with a knowledge, if possible, of Indian conditions and, in addition, there should be two other whole-time members of the Council for agriculture and animal husbandry respectively. The Commission suggested that the Council should consist of thirtysix members, in addition to the Chairman and the two whole-time members. Of these, eight would be nominated by the Government of India, eighteen would represent the provincial, agricultural and veterinary departments, three would represent the Indian Universities, two would represent the Indian Central Cotton recommended by the Royal Commission with the exception of the representatives of the Council was committee and the planting community respective. six members, in addition to the Chairman and tively and five would be nominated by the Council for the approval of the Government of India. The Council would largely work through a communities, who, under the modified scheme. Standing Finance Committee and sub-comwould be members of the Governing Body unttered. A provincial committee should be In view of their exclusion from the Advisory

of the Agricultural Adviser to the Government of India would be taken over by the Chairman and whole-time members of the Council, his administrative duties being taken over by a whole-time Director of the Pusa Institute

Constitution of the Council —In a Resolution issued on May 23rd, 1929, the Government of India stated that whilst they were of opinion that the proposals of the Royal Commission were, on the whole, admirably designed to secure the objects for the attainment of which the establishment of the organisation outlined above was recommended, they considered a Council of thuty-nine members would be too large to be really effective and that it was not desirable that the Legislative Assembly should be deprived of its normal constitutional control over an activity which affects the staple industry of India. They had, therefore decided that the central organisation should be divided into two parts, a Governing Body which would have the management of all the affairs and funds of the Council subject to the limitation in regard to the control of funds which is mentioned below and an Advisory Board the functions of which would be to examine all proposals in connection with the scientific objects of the Council which might be submitted to the Governing Body, to report on their feasibility and to advise on any other questions referred to it by the Governing Body. The Governing Body would consist of the Member of the Governor-General's Council in charge of the portfolio of Agriculture, who would be exoffice Chairman, the Principal Administrative Officer of the Council, who would be ex-officio Vice-Chairman, one representative of the Council of State, two representatives of the Legislative Assembly, one representative of the European business community elected by the Associated Chambers of Commerce of India one representative of the Indian business community elected by the Federation of Indian Chambers of Commerce and Industry, the Provincial Ministers of Agriculture, two representatives elected by the Advisory Board and such other persons as the Governor-General in Council might from time to time

Central Legislature and the representa-tives of the European and Indian commercial

Board, the university representation would be gratefully accepted and the Revenue Member increased from three to four and the scientific of the Nizam's Government has been added to representation by the addition of the Director the Governing Body, the Director of Agriculture of the Indian Institute of Science, Bangalore, a and of Veterinary Services becoming members epresentative of the Forest Research Institute, Indian Research Fund Association. A representative of the Co-operative Movement would also be added. The Principal Administrative Officer to the Council would be ex-officio Chairman of the Advisory Board.

The Government of India further announced that for the lump grant of Rs. 50 lakhs recom-mended by the Royal Commission, they had decided to substitute an initial lump grant of Rs. 25 lakhs, of which Rs 15 lakhs would be paid in 1929-30, supplemented by a fixed minimum grant annually. The annual grant would be Rs. 7.25 lakhs, of which Rs. 5 lakhs would be devoted to the furtherance of the scientific objects of the Council and the remaining Rs. 2 25 lakhs to the cost of its staff and secretariat The Council would have an entirely free hand in regard to the expenditure of the grants made to it for scientific purposes subject to the condition that no liability in respect of such matters as leave or pension contributions after the research for which the grant had been given would be incurred. In regard to the grant to meet the cost of staff, establishment, as a Department of the Government of India

The Council has since been constituted a separate Department of the Government of India for the purpose of administering this grant

The Government of India also stated their decision that the Council should not be constituted under an Act of the Imperial Legislature ment had offered a donation of Rs. 2 lakhs to A M Livingstone and the Secretary—Mi N C the funds of the Council. This offer was Mehta, I C S

of the Advisory Board. Since then donations of Dehra Dun, and a representative elected by the one lake each, payable in 20 equal annual instal-indian Research Fund Association. A reprements, have been made by the Mysore, Baroda, sentative of the Co-operative Movement would Cochin. Travancore and Kashmir States and each nominates one representative to the Governing Body of the Council and two technical members to the Advisory Board. The Bhopal State has also been admitted as a constituent member of the Council on payment of a donation of Rs 50,000 in 20 equal annual instalments and has been allowed the same representation on the Council as has been granted to the other constituent States.

> Personnel.—In addition to the 19 ex-officio members the Governing Body includes the following gentlemen .-

The Hon'ble Diwan Bahadur G Narayanaswamy Chetty, elected by the Council of State, Pt Sri Krishna Dutta Paliwal, M.L A and Mr. Mohamed Ashar Ah, M L A, elected by the Legislative Assembly, Sir Joseph Kay and Mr Chuntlal B Mehta representing the business community, Messrs. Carpenter and Kerr, elected by the Advisory Board, and the Hon'ble Sir Frank Noyce, and Diwan Bahadur Sir etc, the Council would be in the same position T. Vijayaraghavacharya, additional members appointed by the Governor-General in Council.
The Chairman of the Council is the Hon ble
Member of the Council of His Excellency the Governot-General for the time being in charge of the portfolio of Agriculture The Hon. Kunwar Sii Jagdish Piasad, Kt., C.S.I., C.I.E., C.B.E.

The whole-time officers of the Council are -Stituted under an Act of the Imperial Legislature as recommended by the Royal Commission The Vice-Chairman—Since the retriement of but should be registered under the Registration Diwan Bihadui Sir T. Vijayanghayachraya on of Societies Act, XXI of 1880 In pursuance the 25th October 1935, the post has not been of this decision, a meeting of those who would permanently filled. Sir layer Bint, Kt., C.I.E., constitute the Society was held at Simla in M.B.E., I.A.S., Agricultural Expert to the Jime, 1929, to consider the terms of a memo. Comicil has been appointed to othere as vice-landium of association and the Rules and Chairman from that date. The Expert Regulations. At that meeting, it was announced Advisers: D. F. J. F. Shaw, D. Sc. I.A.S. that His Exalted Highness the Nizam's Govern-Colonel A. Olver, C.B., C.M.G., F.R.C. V.S., Mr. C. M. M. Livingstone and the Society—M. M. C.

SCHEME FOR THE IMPROVEMENT OF AGRICULTURAL MARKETING IN INDIA

dations made by the Royal Commission on marketing Agriculture, and generally endorsed by the Contral Banking Enquiry Committee regarding Office of the contral hist stwp should be the appointment tor a limited period of a highly qualified and exprinted Marketing Expert with practical Adviser a Central Staff was appointed in knowledge of agricultural marketing in other [February 1935] consisting of Scintol Marketing countries. This officer and the necessity Officers, and Marketing Officers and 12 Assistant assistants should be attached to the Imperial Marketing Officer. Arrangements were made consoller.

In view of the importance of improved agricul- (make recommendations as regards standard tmal marketing as an aid to the general economic grades for the various commodities and advise recovery of the country, the Government of local Governments and provincial Department India decided to give effect to the recommen-of Agriculture generally in regard to agricultural

2 In accordance with this decision the Office of the Agricultural Marketing Adviser marketing surveys. After consultation with to the Government of India was constituted. Provincial Government it was decided that the with effect from 1st January, 1935, at the Old first step should be the appointment for a Scrietarial Buildings, Civil Lines, Delhi With Mr. A. M. Lavingstone as Agricultual Marketing Council of Agricultural Research and should at the same time to appoint a nucleus marketing undertake the investigation of marketing prostaff in each of the Provinces Naturally, a blems formulate schemes for improvement, good deal of time was spent in the course of

the year getting the necessary staff together concerned. In this latter connection a consi- and in making a start with the work. By the detable amount of analytical work has been end of September 92 full-time Marketing Officers were operating throughout India and Burma Of these, 32 (Assistant Marketing Officers) were provided in the Provinces out of grants made by the Imperial Council of Agricultural Research, 12 Marketing Officers were appointed by the local Governments and 29 by the Durbars of the major Indian States A list of the Central Marketing Officers, and Senior Marketing Marketing Officers, and Senior Marketing Officers in some of the Provinces and Indian States is given below. In provinces and States for which no Senior Marketing Officer is shown the Director of Agriculture supervises direct the work of the Marketing Staff In addition to the full-time Marketing Staffs referred to, 223 others were nominated to deal with marketing questions in the smaller Indian States and Minor Administrations

- 3 Towards the close of the year, the Coffee Cess Committee arranged to appoint a Marketing Officer for Coffee and this Officer was attached to the Office of the Agricultural Marketing Adviser
- 4. The programme of work which was agreed to by the Central and local Marketing Staff at a Conference held at Delhi in March 1935 involves a series of marketing surveys on a number of important commodities and covers the main cereals, fruit and livestock products
- 5. The investigation work connected with a study of prices and the quality of the products market development work

done at various research institutions in the country Generally speaking, the market investigations have been carried out by means of personal interviews assisted by a standard list of questions in the form of questionnanes, and the Marketing Officers in the course of their work, apart from visiting the villages and mundis, interview representative members of different groups of persons concerned in the production and distribution of commodities, for example, producers, distributors, wholesalers, manufacturers, railway agents and so on

- 6 The Central Marketing Staff are responsible tor survey work in a large number of States which do not have staff of their own have also to advise and assist the local Marketing Staff in carrying out their work
- 7 In the course of the year the Central Marketing Officers visited all the Provinces and 78 States Altogether they spent 3,644 days on tour
- Although the work was in many cases late m starting, several of the Provinces and States have already submitted picliminary marketing survey reports on some of the commodities taken up for investigation this year, and the others are expected to complete the work shortly As soon as this is finished, the Central Marketing Staff will undertake compilation of an All-India report on each of the commodities and make the surveys ranges over the whole field of specific recommendations to improvements Marketing, but special attention is devoted to which will be followed up later by practical

List of the Central Marketing Officers, and the Senior Marketing Officers in Provinces and Indian States

A .- Central Marketing Staff

Agricultural Marketing Adviser to the Government of India - Major A McD. Livingstone, M.C., M A., B.SC

Senior Marketing Officers — C B Samuel, M A., B.Sc. (Hons). A M Thomson, H. C Javaraya, L.Ag, FLS, FRH.S

Marketing Officers - B P Bhargava, BSC, AM Inst BE, Di T G Shinnaine, BAG, PHD, FREcons, D N Khurody, ID.D FSS, (Hons)

Assistant Marketing Officers — Triyugi Piasad, M.A., L.B., F. A. Shah, B.A., P. L. Tandon, B.Sc. (Wakes), F.R. Konis (London), Hukmat Khan, B.Sc. (Agri), K. Comatrasaniy Chetty, B.Sc. (Edin), S. C. Chaktavarti, B.Ag. (Bom), E. M. Bee, K. Gopalan, M.A. Dip Econ, C. H.D., B.Com (Manch), FR cons, Shashikant, ND,D (Scot), Fazal Haq, BA, Msc. (Reading), Nurul Islam, Y T Desai, BAg, Msc (Econ.), London, FR, Econ S

B -Provinces

Madras -- K. Gopalakrishan Raju, LAg, Provincial Marketing Officer, Madras

Bombay -E J. Bruen, Marketing Officer and Livestock Expert to the Government of Bombay, Poona

Bengal — A R Malik, MA., B8g, Semon Marketing Officer, Bengal, Writers' Building, Calcutta.

United Provinces - - J A Manawwai, M A .B.Sc. (Edin.), M.S.A (Texas), Provincial Marketing Officer, United Provinces, Lucknow.

Punjab — Kartai Singh, L. Ag., B.Sc. (Agil.), N.D. (Reading), Marketing Officer, Punjab, Lahore

Bihar & Orissa -- B N Sarkar Lag Senior Marketing Officer, Bihar and Orissa, Patna

Central Provinces -R H Hill M & (Cantab), Provincial Marketing Officer, Nagpur

Burma -F D Odell, MA, 1AS, Marketing Officer, Burma, Secretariat, Rangoon

Assam -L K Handique, B Sc Agri (Edin) Senior Marketing Officer, Assam, Shillong

C -Indian Station

Hyderabad — Ahmed Mohruddin, B A, Marketing Officer, H E H the Nizam's Government, Hyderabad (Deccan)

Mysore—V Venkatachar, MA, B com., Superintendent of Commercial Intelligence and Marketing Officer, Mysore State, Bangalore

Kashmir - Captain R G Wieford, Chairman Jammu and Kashmii Marketing Board, Srinagar (Kashmir)

Patula — Harchand Singh, Marketing Officer, Patula LAg, Semor

Bhopal -K F Haider, Marketing Officer, Bhopal State, Bhopal.

The main increase has been in the class of productive works, which irrigated 41 million acres in 1878-79 and rose to 20.756.209 acres in 1926-27. During the year 1932-33 the areas irrigated by productive and unproductive works amounted to 21,586,296 acres and 4.623,622, acres respectively.

The area irrigated in 1933-34 was largest in the Punjah, in which province 11 34 million acres were irrigated during the year. In addition about 674,810 acres were irrigated from channels which although drawing their supplies from British canals, lie wholly in the Indian States The Madras Presidency came next with an area of 7.48 million acres, followed by Sind with an area of 4.7 million acres.

Capital and Revenue —The total capital invested in the works has risen from Rs 42,36 lakhs in 1900-01 to Rs 148 76 crores in 1933-34 The gross revenue for the year was Rs 1,310 lakhs and the working expenses Rs 486 lakhs, the net return on capital being, therefore, 5 54 per cent. In considering the latter figure, it must be remembered that the capital invested includes considerable expenditure on two large projects, the Lloyd (Sukkur) project, and the Cauvery Mettur Project The former project which was opened for irrigation in 1932 yielded a net revenue of Rs 25 lakhs against Rs 20 lakhs in the preceding year while the latter project which was still under construction during the year under review, yielded a net revenue of Rs 75.000 only

Charges for Water.—The charges for water are levied in different ways in the various provinces. In some, notably in Sind, the ordinary land revenue assessment includes also the charge for water, 9/10ths of this assessment being regarded as due to the as in parts of Madras and Bombay, different rates of land revenue are assessed according to whether the land is irrigated or not, and the assessment upon irrigated land includes also assessment upon irrigated land includes also the charge for water. These methods may however be regarded as exceptional. Over the greater part of India water is paid for sepa-rately, the area actually irrigated is measured, and a rate is charged per acre according to the erop grown. Lower rates are often levied in cases where irrigation is by "lift", that is to say where the land is too high for the water to flow on to it by gravity and consequently the cultivator has to lift it on to his field.

Various other methods of assessment have been tried, such as by renting outlets for an annual sum, or by charging according to the which is now followed as far as possible in canal administration, but has no confidence in a system under which his liability for water rate is independent of the area and quality of his crop.

From 10½ million acres in 1878-79 the area province. Thus in the Punjab, they vary from annually irrigated rose to 19½ million acres at the beginning of the century and to 31 5 million acres in 1933-34 to Rs. 7-8-0 per acre for rice, from Rs. 4-to Rs. 7-8-0 per acre for rice, from The main increase has been in the class of Rs. 3-4-0 to Rs. 5-4-0 per acre for wheat, from Rs. 3-4-0 to Rs. 5-4-0 per acre for cotton and from Rs. 2 to Rs. 3-4-0 per acre for millets and pulses. Charge is made for additional water-Charge is ings. Practically speaking, Government guarantees sufficient water for the crop and gives it as available. If the crop fails to mature, or if its yield is much below normal, either the whole or part of the irrigation assessment is remitted.

> A somewhat different system, the long lease system, is in force in parts of Bengal and the Central Provinces under which the cultivators pay a small rate for a term of years whether they take water or not. In these provinces where the normal rainfall is fairly high, it is always a question whether irrigation will be necessary at all, and if the cultivators have to pay the full rate, they are apt to hold off until water becomes absolutely essential, and the sudden and universal demand then usually exceeds the supply. By paying a reduced rate every year for a term of years they become entitled to water when required; consequently there is no temptation to wait till the last possible moment, and the demand is much more evenly distributed throughout the season.

> Taken as a whole, irrigation is offered on extremely easy terms, and the water rates represent only a very small proportion of the extra profit which the cultivator secures owing to the water he receives.

> Central Bureau of Irrigation.—An important event of the thiennium 1930-33 was the establishment of a Central Bureau of Irrigation as an essential adjunct of the Central Board of Irrigation This organization satisfies a want long felt by irrigation officers and has great potentialities in connection with the development of Indian irrigation. The Bureau came into being in May 1931 Its main objects are to ensure the free exchange of information and experience on irrigation and alhed subjects between the engineer officers of the various provinces, to co-ordinate research in irrigation matters throughout India and to disseminate the results achieved, to convene at intervals general congresses at which selected irrigation matters will be discussed by officers from various provinces, and to establish contact with similar bureaux in other countries with a view to the exchange of publications and information. These objects necessitate among other things the maintenance of a compichensive library of irrigation publications both Indian and foreign, and the expenditure on the establishment and on the library is considerable. The bureau was financed during the year 1931-32 by the Government of India, but local Governments have since consented to contribute towards its support, and it has thus achieved an independent existence under the Central Board of Irrigation, the Government of India contributing in the same manner as provincial Governments

The rates charged vary considerably with the irrigated in British india by Government works crop grown, and are different in each province of all classes during the triennum 1930-33 was and often upon the several canals in a single 30 23 million acres

The results obtained in each province are given in the table below :--

		Provi	nces.			Average area irrigated in triennium 1927-30.	Average area irrigated in triennium 1930-33.

^{*} In addition 674,810 acres were grigated on Indian State chain els on the Western Junion canal and the Sirhind canal

† Excluding 22,582 acres irrigated by the Paharpin canal for which at present no capital and revenue accounts are kept

Canals in Sind, the Canvery (Mettin) project in full section in index 0 to 396, and constructing Madias, and the Sutley Valley Cinals in the Punjab. The Lloyd Barrage which was opened by His Excellency the Vicerov early in 1932, is the greatest work of its kind in the world, measuring 4.725 feet between the faces of the regulators on The year 1933-34 was the second other side year of working of the Lloyd Barrage canals and the results obtained were generally satisfactory The total area migated was 2,770,000 acres of which 1,570 000 acres were in kharif and 1,200 000 in tab. The acreages index when the and offer of the control were 1,000 000 and 567,000 respectively. tively. The canals construction scheme has been almost completed, and the revenue account of the scheme was opened with effect from the fmancial year 1932-33

The construction work carried out during 1933-34 chiefly consisted of the remodelling of the old channels, the excavation of the main and branch water courses, and the construction of modules and home pipe culverts. Many new masonry works were constructed and additions and alterations were carried out to the existing structures, where such works were found to be necessary. A few additional regulators were sanctioned and constructed, and weak portions of the banks of the canals were strengthened Scheme which according to the accelerated pro- acres in Bikaner.

New Works. The major works of except gramme was to be completed in the financial vest tional importance are the blood. Barrage and 1934-35. The work of raising the limit to its The work of raising the Bund to its the new Bund from miles 39.6 to 97.9 was in progress, and the total earth work completed up to and including the year under reference amounted to 10 crores cubic feet

The Sutlej Valley Works which reached completion by the end of 1932-33 received the sanction of the Secretary of State for India in 1921-22. It falls into four natural groups centred on the Ferozepur, Suleimanke, Islam, and Panjnad Headworks During the triennium ending 1932-33 all the State Canals taking off from the first three headworks, namely the Bikaner, Fordwah, Eastern Sadiqia, Bahawalpur and Qaimpur Canals were handed over to the States The remaining two Canals, namely the Abbasia and Panjnad Canals taking off from the Panjnad Headworks, were also banded over to the Bahawalpur State during the year The total expenditure on the Project to the end of 1932-33 amounted to Rs 2112 crores which include Rs 1163 crores contributed by the States of Bikaner and Bahawalpurthe co-partners in the Project The total area to be irrigated is 5,108,000 acres, or nearly 8,000 square miles. Of this, 2,075,000 acres are perennial and 3,033,000 acres non-perennial Satisfactory progress was made with the cularged a trigation. 1,942,000 acres are in British territory, and comprehensive Flood Protective Bund 2,825,000 acres in Bahawalpur and 341,000

The Cauvery-Mettur Project was mauguand took 9 years to complete. It is built across million cubic feet of masonry were used.

The scheme is designed to irrigate some rited on August 21, 1934 The dam which has 1,300,000 acres of rire fields 125 miles away from some of its features is the largest in the world Reservoir has an effective capacity of 93,500 million cubic feet whilst the dam has an over-all the river Cauvery at a point 240 miles from its length of a little over a mile source in Westein Ghats During the construcbe assisted by about 70 miles of main canals tion of the dam 206,000 tons of cement and 55 tories. The Cauvery-Mettur Scheme also provides for hydro-electric power.

WELLS AND TANKS.

So far we have dealt only with the great irrigation schemes. They are essentially exotic, the products of British rule; the real eastern instrument is the well. The most recent figures give thirty per cent, of the irrigated area in India as being under wells. Moreover the well is an extremely efficient instrument of irrigation. When the cultivator has to raise every drop of water which he uses from a varying depth, he is more careful in the use of it; well water exerts at least three times as much duty as canal water. Again, owing to the cost of lifting, it is generally used for high grade crops. It is estimated that well-irrigated lands produce at least one-third more than canal-watered lands Although the huge areas brought under cultivation by a single canal scheme tend to reduce the disproportion between the two systems, it must be remembered that the spread of canals in-creases the possibilities of well irrigation by adding, through scepage, to the store of subsoil water and raising the level.

Varieties of Wells.—Wells in India are of every description. They may be just holes in the ground, sunk to subsoil level, used to a year or two and then allowed to fall into docay. These are temporary or kacha wells. Or they may be lined with timber, or with brick or stone. They vary from the kacha well costing a few rupees to the majorry well, which will run into thousands, or in the sandy wastes of Bikaner, where the water level is three hundred feet below the surface, to still more. The means of raising the water vary in equal degree. There is the picotah, or weighted lever, raising a bucket at the end of a pivoted pole, just as is done on the banks of the Nile. This is rarely used for lifts beyond fifteen feet. For greater lifts bullock power is invariably used. This is generally harnessed to the mot, or leather bag, which is passed over a pulley overhanging the well, then raised by bullocks who walk down a ramp of a length approximating to the depth of the well. Sometimes the mot is just a leather bag, more often it is a self-acting arrangement, which discharges the water into a sump automatically on reaching the surface. By this means from thirty to forty gallons of water are raised at a time, and in its simplicity, and the ease with which the apparatus can be construct-

pots running round a wheel. Recently attempts have been made, particularly in Madray, to substitute mechanical power, furnished by oil engines, for the bullock. This has been found economical where the water supply is sufficiently large, especially where two or three wells can Government have systematically be linked. encouraged well irrigation by advancing funds for the purpose and exempting well watered land from extra assessment due to improvement These advances, termed takavı, are freely made to approved applicants, the general rate of interest being 6½ per cent in Madras and Bombay ryots who construct wells, or other works of agricultural improvement, are exempt from enhanced assessment on that account. In other provinces the exemption lasts for specific periods, the term generally being long enough to recoup the owner the capital sunk.

Tanks.—Next to the well, the indigenous instrument of irrigation is the tank. The village or the roadside tank is one of the most conspicuor the roadsuce tank is one of the most conspicu-ous features in the Indian scene. The Indian tank may be any size. It may vary from a great work like Lakes Fife and Whiting in the Bombay Presidency or the Perivar Lake in Travancore, holding up from four to seven billion cubic feet of water, and spreading their waters through great chains of canal, to the little village tank irrigating ten acres. They date back to a very early stage in Indian civili-sation. Some of these works in Madras are of great size, holding from three to four billion cubic feet, with water spreads of nine miles The inscriptions of two large tanks in the Chingleput district o' Madras, which still irrigate from two to four thousand acres are said to be over 1,100 years old. Tank irrigation is practically unknown in the Punjab and in Sind, but it is found in some form or other in all other provinces, including Burma, and finds its highest development in Madras. In the ryotwari tracts of Bombay and Madras all but the smallest tanks are controlled by Government. In the zemindari tracts only the large tanks are State works. According to the latest figures the area irrigated from tanks is about eight million acres, but in many cases the supply is extremely precarious. So far from tanks being a refuge in famine they are often quite useles! ed and repaired by village labour, the mot is inasmuch as the rainfall does not suffice to fits unsurpassed in efficiency. There is also the them and they remain dry throughout the Persian wheel, an endless chain of earthenware season.

Meteorology.

The meteorology of India like that of other rainfall for the three months October to Decountries is largely a result of its geographical cember amounts to 31.78 inches. The other position. The great land area of Asia to the rorthward and the enormous sea expanse of the Indian Ocean to the southward are determining factors in settling its principal from the settled factors in settling its principal fortunation of the southward are determining factors in settling its principal february and part of March is traversed by meteorological features. When the North-sern Hemisphere is turned away from the sun, in the northern winter, Central Asia becomes an area of intense cold. The meteorological conditions of the temperate zone are pushed in normal years, however, in Northern India southward and we have over the northern pro- periods of time weather alternate with neronda southward and we have over the northern provinces of India the westerly winds and eastward moving cyclonic storms of temperate regions, while, when the Northern Hemisphere is turned towards the sun, Southern Asia becomes a super-heated region drawing towards it an immense current of air which carries with it the enormous volume of water vapour which it has picked up in the course of its long passage over the wide expanse of the Indian Ocean, so that at one season of the year parts of India are deluged with rain and at another persistent dry weather prevoils.

Monsoons .-- The all-important fact in the meteorology of India is the alternation of the seasons known as the summer and winter monsoons. During the winter monsoon the winds are of continental origin and hence, dry, fine weather, clear skies, low humidity and little air movement are the characteristic features of this season The summer rains cease in the pro-vinces of the North-West Frontier Province and the Punjab about the middle of September after which cool westerly and northerly winds set in over that area and the weather becomes fresh and pleasant. These fine weather conditions extend slowly eastward and southward so that by the end of October, they embrace all parts of the country except the southern half of the Penincula, and by the end of the year have extended to the whole of the Indian year have extended to the whole of the induan land and sea area, the rains withdrawing to the Equatorial Belt. Thus the characteristics of the cold weather from October to February over India are:—Westerly winds of the temperate zone over the extreme north of India. to the south of these the north-east winds of the winter moneoon or perhaps more properly the north-east Trades and a gradually extend-ing area of fine weather which, as the season progresses, finally embraces the whole Indian land and sea area. Two exceptions to these fine weather conditions exist during this period, viz, the Madras coast and the north-west of India. In the former region the north-east winds which set in over the Bay of Bengal in October coalesce with the damp winds of the retreating summer monsoon, which current curves round over the Bay or Bengal, and blowing directly on to the Madras coast gives to that region the wettest and most disturbed weather of the whole year, for while the total

In normal years, however, in Northern India periods of fine weather alternate with periods of disturbed weather (occurring during the passage of these storms) and light to moderate and even heavy ram occurs. In the case of Peshawar the total rainfall for the four months, December to March, amounts to 575 inches while the total fall for the four months, June to September, is 4.65 inches, showing that the rainfall of the winter is, absolutely, greater in this region than that of the summer monsoon. These two periods of subsidiary "rains" are of the greatest economic importance. The fall in Madras is, as shown above, of considerable actual amount, while that of North-west India though small in absolute amount is of the greatest consequence as on it largely depend the grain and wheat crops of Northern India.

Spring Months .-- March to May and part of June form a period of rapid continuous increase of temperature and decrease of barometric pressure throughout India. During this period there occurs a steady transference northward of the area of greatest heat. In March the of the area of greatest heat. In March the maximum temperatures, slightly exceeding 100° occur in the Deccan; in April the area of maximum temperature, between 100° and 105°, lies over the south of the Central Provinces and Gujarat; in May maximum temperatures, varying between 105° and 110°, prevail over the greater part of the interior of the country while in June the highest mean naximum temperatures, exceeding, 110° occur in the Indus Valley near Jacobabad. Temperatures exceeding 120° have been recorded over a wide area including Sind, Rapputana, the West and South Punjab and the west of the United Provinces, but the highest temperature hitherto recorded is 127° registered at Jacobabad on June 12th, 1919. During this period of rising temperature and diminishing barometric pressure, great alterations take place in the air movements over India, including the disappearance of the north-east winds of the winter monsoon, and the air circulation over India and its adjacent seas, becomes a local circulation, characterised by strong hot winds down the river valleys of Northern India and increasing land and sea winds in the coast regions. These land and sea winds, as they become stronger and more extensive, initiate large contrasts of temperature and humidity which result in the production of violent local rainfall for the four months June to September, storms. These take the forms of dust storms is, the summer monsoon, at the Madras Oblin the dry plains of Northern India and of servatory amounts to 15.46 inches the total thunder and hallstorms in regions where there winds from the interior. These storms are frequently accompanied with winds of exces-

By the time the area of greatest heat has been established over North-west India, in the last week of May or first of June, India has become the seat of low barometric pressures relatively to the adjacent seas and the whole character of the weather changes. During the hot weather period, discussed above, the winds and weather are mainly determined by local conditions. Between the Equator and Lat. 30° or 35° south the wind circulation is that of the south-east trades, that is to say from about Lat, 80°-35° south a wind from south-east blows over the surface of the sea up to about the equator. Here the air rises into the upper strata to flow back again at a considerable elevation to the Southern Tropic or beyond. To the north of this circulation.

1°, between the Equator and Lat. 20° to 25° North, there exists a light unsteady circulation the remains of the north-east trades, that is to say about Lat. 20° North there is a northcast wind which blows southward till it reaches the thermal equator where side by side with the south-east Trades mentioned above, the air rises into the upper strata of the atmosphere. Still further to the northward and in the immediate neighbourhood of land there are the circulations due to the land and sea breezes which are attributable to the difference in the which are attributable to the difference in the heating effect of the sun's rays over land and sea. It is now necessary to trace the changes which occur and lead up to the establishment of the south-west monsoon period. The sun at this time is progressing slowly northward towards the northern Tropic. Hence the thermal equator is also progressing northward and with it the area of ascent of the south-east trades circulation. Thus the south-east trade winds cross the equator and advance further and further northward, as the thermal equator and area of ascent follows the sun in its northcin progress At the same time the temperature over India increases rapidly and barometric pressure diminishes, owing to the air rising and being transferred to neighbouring cooler regions—more especially the sea areas. Thus we have the southern Trades circulation extending northward and the local land and sea circulation extending southward until about the beginning of June the light unsteady interfeing circulation over the Arabian Sea finally breaks up. the immense circulation of the South-east Trades, with its cool, moisture laden winds rushes forward, becomes on to the local circulation proceeding between the Indian land area and the adjacent seas and India is invaded by oceanic conditions the south-west monsoon proper. This is the most important season of the year as upon it depends the prosperity of at least five-sixths of the people of India.

When this current is fully established a continuous air movement extends over the Indian Ocean, the Indian seas and the Indian land to the southern face of these hills. The re-area from Lat. 30° S. to Lat. 30° N. the southern maining portion of the Bay current advance

is inter-action between damp sea winds and dry half being the south-east trades and the northern half the south-west monsoon. The most impotant fact about it is that it is a continuous sive force, heavy hail and torrential rain and are on that account. very destructive being know as "Norwesters" in Bengal tion is constantly in progress so that where the current enters the Indian seas and flows over the Indian land it is highly charged with aqueous vapours.

> The current enters the Indian seas quite at the commencement of June and in the course of the succeeding two weeks spreads over the Arabian Sea and Bay of Bengal up to their extreme northern limits. It advances over India from these two seas. The Arabian Sea current blows on to the west coast and sweeping over the Western Ghats prevails more or less exclusively over the Peninsula, Central India, Rajputana and north Bombay. The Bay of Bengal current blows directly up the Bay. One portion is directed towards Burma. East Rengal and Assam while another portion curves to south at the head of the Bay and over Bengal, and then meeting with the barrier of the Himalayas curves still further and blows of the Himalayas curves still further and blows as a south-easterly and easterly wind right up the Gangetic plain. The south-west monsoon continues for three and a half to four months, viz., from the beginning of June to the middle or end of September. During its prevalence more or less general though far from continuous rain prevails throughout India, the principal features of the rainfall distribution being as follows. The greater india, the principal features of the rainfall distribution being as follows. The greater portion of the Arabian Sea current, the total volume of which is probably three times as great as that of the Bengal current blows directly on to the west coast districts. Here it meets an almost continuous hill range is forced by the record that are the season of the season beautiful that are the season of the season forced into ascent and gives heavy rain alike to the coast districts and to the hilly range, the total averaging about 100 inches most of which falls in four months. The current after parting with most of its moisture advances across the Peninsula giving occasional uncertain rain to the Deccan and passes out into the Bay where it coalesces with the local current. The northern portion of the current blowing across the Gujarat, Kathawar and Sind coasts gives a certain amount of rain to the coast districts and frequent showers to the Aravalli Hill range but very little to Western Rajputana, and passing onward gives moderate to heavy rain in the Eastern Punjab, Eastern Rajputana and the North-west Himalayas In this region the current meets and mixes with the monsoon current from the Bay.

> The monsoon current over the southern half of the Bay of Bengal blows from southerwest and is thus directed towards the Tenasserim hills and up the valley of the Irrawady to which it gives very heavy rain. That portion of this current which advances sufficiently far northward to blow over Bengal and Assam gives very heavy rain to the low-lying districts of East Bengal and immediately thereafter coming under the influence of the Assam Hills is forced upwards and gives excessive rain (perhaps the heaviest in the world)

from the southward over Bengal, is then of storms recorded during the period 1877 to directed westward by the barrier of the 1901 and shows the monthly distribution:—
Himalayas and gives general rain over the Gangetic plain and fairly frequent rain over the lower ranges of the Himalayas from Sikhim to Bay of Bengal ... Kasbmir.

To the south of this easterly wind of the Bay current and to the north of the westerly wind of the Arabian Sea current there exists a debatable area running roughly from Hissar in the Punjab through Agra, Allahabad and part of Chota Nagpur to Orissa, where neither current of the monsoon prevails. In this area the rainfall is uncertain and would probably be light, but that the storms from the Bay of Bengal exhibit a marked tendency to advance along this track and to give it heavy falls of oceasional rain.

The Total rainfall of the monsoon period (June to September) is 100 inches over part of the west coast, the amount diminishes eastward, is below 20 inches over a large part of the centre and east of the Peninsula and is only 5 inches in South Madras: it is over 100 inches on the Tenasserim and South Burma coast and decreases to 20 inches in Upper Burma; it is over 100 in the north Assam Valley and diminishes steadily westward and is only 5 inches in the Indus Valley.

The month to month distribution for the waole of ladia is :-

May	••	3'1	inches.	
June		7.9	,,	
July	••	11*2	,,	
August		10.3	,,	
Septemb	er	7.0	,,	
October	••	3.3	,,	

Cyclonic storms and cyclones are an almost season. The following gives the total number after year,

1 July Aug. Sec. Oct. Nov. Dec. Bay of Bengal 41 36 45 34 22 Jan, Feb. Mar. Apl. May June Arabian Sea 2 15 July Aug. Sep. Oct. Nov. Dec. Arabian Sea 2 1

The preceding paragraphs give an account of the normal procession of the seasons throughout India during the year, but it must be remembered, that every year produces varia-tions from the normal and that in some years these variations are very large. This is more particularly the case with the discontinuous element rainfall. The most important variations in this element which may occur are :-

- (1) Delay in the commencement of the rains over a large part of the country, this being most frequent in North Bombay and North-west India.
- (2) A prolonged break in July or August or botb.
- (3) Early termination of the rains, which may occur in any part of the country.
- (4) The determination throughout the monsoon period of more rain than usual to one part and less than usual to another part of the country. Examples of this occur every year.

About the middle of September fine and nesh weather begins to appear in the extreme north-west of Ind'a. This area of fine weather and dry winds extends castward and southward the area of rainy weather at the same time con-tracting till by the end of October the rainv area has retreated to Madras and the south of the Peninsula and by the end of December invariable feature of the monsoon period. In has disappeared from the Indian region; fine the Arabian Sea they ordinarily form at the clear weather prevailing throughout. This commencement and end of the season, vz., procession with the numerous variations and May and November, but in the Bay they form a constantly recurring feature of the monsoon meteorological conditions repeats itself year

(For monsoon of 1935, see page 298)

INDIA METEOROLOGICAL DEPARTMENT.

Functions of the Department.—The India Meteorological Department was instituted in 1875 to combine and extend the work of various provincial meteorological services which had sprung up before that date. The various duties which were imposed on the Department at the supplemented by new duties. The main exist-ing functions, more or less in the historical order in which they were assumed, may be briefly summarised as follows:—

- (a) The issue of warnings to ports and coastal districts of the approach of cyclonic storms.
- (b) The issue of storm warnings by wireless to ships in the Indian seas, and the making of arrangements for the collection of meteorological data from ships.
- (c) The maintenance of systematic records of meteorological data and the publication of climatological statistics of furnish data for the investigation of the relation between weather and disease.
- (d) The issue to the public of up-to-date weather reports and of rainfall forecasts These duties were originally recommended by a Committee of Enquiry into the causes of famine in India.
- (e) Meteorological researches of a general character, but particularly regarding tropical storms and the forecasting of monsoon and winter rainfall.
 - (f) The issue of seasonal rainfall forecasts.
- (g) The issue of telegraphic warnings of heavy rainfall by special telegrams to district officers on departmental warning lists (eq, ton of weather reports is an essential feature canal and railway engineers), and by means of the international Tele-communication. public in general.
- (h) Supply of meteorological, astronomical and geophysical information in response to enquiries from officials, commercial firms or private individuals.
- (1) Technical supervision of rainfall registration carried out under the control of provincial Government authorities.
- (1) The study of temperature and moisture conditions in the upper air by means of instru-ment-carrying balloons and of upper winds by pilot balloons.
- (k) The issue of weather reports and warnings to aircraft, civil and military, the latter being in collaboration with the Royal An Force.
- (l) The training and examination in meteolology of candidates for air pilots' licenses.

- In addition to these meteorological duties the India Meteorological Department was from time to time made responsible for or undertook various other important duties, such as-
- (n) Determination of time in India and the issue of time-signals, also the determination of eriors of chronometers for the Royal Indian Navy.
- (o) Observations and researches on terrestrial magnetism at Bombay and atmospheric electricity at Bombay and Poona
- (p) Regular study (mainly by spectroscopic examination) of the sun at the Solar Physics Observatory at Kodaikanal
- (q) Maintenance of seismological instruments at various centres.

ORGANISATION.

It is necessary to note that practical meteorology implies a meteorological organisation, note merely individual meteorologists relying upon their own personal and purely local observations. The making of a single forecast in any of the larger meteorological offices of the world requires the co-operation of some hundreds of persons in India some 400 observers co-operate daily to take simultaneous observa-

tions at about 300 separate places and hand in their reports to telegraphists, who transmit them to forecast centres, where, for rapid assimilation, clerks decode them and chart them on maps, meteorological experts then draw therefrom the conclusions on which their torecasts are based. There are other observatories, which take observations for chimatological purposes but do not telegraph them.

An efficient system of telegraphic communication Convention.

While the above is true, in general, of all applications of practical ineteorology, its application to aviation involves the existence of a specialised and particularly designed organisation. Aviators require detailed information about the weather, they wish to know winds at different levels, have information about visibility, fogs, dust-storms, thunderstorms, height of low clouds, etc., along with forecasts of changes in these elements. Many of these are local, short-lived and rapidly changing phenomena.

recommendations regarding the nature of information to be supplied to aircraft, the exhibition of current weather information at aerodromes and the meteorological organisation of international airways have been embodied in Annexe G of the International Convention of Air Navigation. In accordance with these recommendations, expert meteorolo-(m) Study of meteorology in relation to gists should be stationed at aerodromes at agriculture a subject on which the Royal reasonable intervals along the airway to supply to the aviation personnel current information recommendations.

Forecast centres should be established class at least at each main aerodrome along aerial toutes and forecasts prepared at such centres should be transmitted to the other aerodromes for the information of pilots Other recommendations refer to hours and kind of observations and manner of codifying them

In Europe practically all observatories record and telegraph readings at least thrice daily, while stations near air routes do so every three In the United States of America readings ire made at least twice daily at all observatories, every three hours at most observatories near air routes and every hour at observatories from certain stations along the air routes a few of these at half-hourly and most at hourly intervals in order that the aviators may be of actual weather on the air route itself. between Bahrein and Victoria Point is served day based on observations taken twice daily the general duties of the offices mentioned above at observatories reporting to them The sole torecasting centre in Southern India is at Poona where facilities are available for the issue of one wireless stations along the main trans-India arroute has enabled special meteorological ment is earried on by the Headquarters Offices, Poona (F U W¹.)—
The general administration of the department is earried on by the Headquarters Office along that route. A system of carbon flying in Poona. In addition it is in the content of the con along that route. A system of exchange of current weather reports at specified between stations on the route and of voluntary reports of warning of adverse weather has been introduced with the co-operation of the Director of Wireless and the Director of Civil Aviation making it possible for each wireless station to have in a collected form the information regarding actual weather at neighbouring stations on the air-route for supply to fliers Stations taking put in the scheme are Karachi, Jodhpur, bilin, Allahabad, Calcutta, Chittagong, Akyab, andoway, Bassein, Rangoon and Victoria Point Apart from routine observations at stated times, airmen can obtain information of current local weather at any time by wn cless, by special requisition Further the transmission, along the wireless chain, twice daily, of the latest weather forecasts and upper wind and low cloud informa tion for each part of the air route has been cranged. This enables the latest weather reports to be available to air-craft in flight as well as at the principal aerodromes on the route where they are displayed suitably on weather tice boards

For the Karachi-Madras service, arrangements

routes up to the next aerodrome of the same formation to aerodromes from a few observatorics on the route to supplement the information available in the reports supplied by the forecasting centres.

In order to fulfil the various duties described above, the organisation of the department is made up of a central office, 7 sub-offices, 36 pilot balloon observatories and 328 weather observatories of various classes to distribute over a region stretching from Persia, Aden, Zanzibar on the west to Burma on the east. The central office at Poona is the administrative headquarters of the department. The control over weather observatories, including the responsibility for scrutiny of records and for checking and computation of data received from them dong air routes. In addition, every aerodrome is divided between the offices at Poona, Calcutta eccives by telewriter frequent regular reports and Karachi Forecasting for aviation is divided between these three offices and two offices at Peshawar and Quetta, the last two forecast for military flying and do not serve supplied with current up-to-date information civil aviation Storm-warning for shipping of actual weather on the air route itself. In in the Bay of Bengal is carried on by the Meteoro-India*, the meteorological service for aviation logical Officer at Calcutta, while similar duties infinity, the indecenting call service for aviation logical office at the first which sees are undertaken at minimum recommended in annexe G of the Poona The Upper Air Observatory, Agra, International Convention. The net-work of is in administrative charge of all the pilot observatories in India is much sparser than balloon observatories in India, Burma and the of observations taken at each of them much vatories specialise in the study of Geophysics, smaller. The four-thousand-inde air route particularly terrestrial magnetism and seismology while the observatory at Kodarkanal specialists by two forecasting centres at Karachi and in the study of the solar physics. The next Calcutta, which prepare two synoptic charts a section describes in somewhat greater detail.

GENERAL DUTILS OF THE MAIN OBSERVATORIES AND OFFICES.

m Poona. In addition, it is in immediate and complete charge of all second, third, fourth and fifth class weather observatories in Kashmir, Gujarat, Central India, the Central Provinces and the Pennsula and is responsible for the scrutiny of records and checking and computation of data received from them It receives telegraphic reports of morning observations collected at practically all pilot balloon and first, second, third and fitth class observatories in India and issues daily a telegraphic summary of general weather conditions with forecasts of probable changes in weather during the next 24 hours for the whole country It undertakes the issue of heavy rainfall warnings for practically the whole country except north east India, and the issue of warnings for storms in the Arabian Sea. Its duties on behalf of aviation consist in the issue of weather reports to airmen on routes in central and southern India; for the Karachi-Madras air service, it issues forecasts for the major section viz, Ahmedabad to Madras. This office prepares and publishes the Daily, Weekly and Monthly Weather Reports, and an Annual Volume entitled the "India Weather Review," and issues two annual volumes containing rainfall data of about 3,000 stations in India ust for communicating current weather in- In collaboration with the Agra Observatory, it

^{*} Fuller details of the aviation organisation are contained in the departmental pamphlet intiled "Meteorological Organisation for Airmen."

also publishes an annual volume containing systems. all upper air data collected in India, It is responsible for the preparation of normals of rainfall, temperature, humidity, etc., for all observatories in India. It issues long-range seasonal rainfall forecasts for the country It collects and examines weather logs from ships in the Arabian Sea. It supplies all weather observatories with instruments and stores from the stock, which it maintains It is also responsible for the design, specification test and repair of all meteorological instru-ments. On its transfer from Simila to Poona the Headquarters Office was equipped as an upper air observatory and a first class weather observatory It also has facilities for research in theoretical and practical meteorology. It is now one of the two main centres for the conduct of upper air research in India, sounding balloon work directed from there has been largely responsible for our present extension of largely responsible for our present extension of knowledge of the free atmosphere over the Peninsula, Publications of meteorological research in the Department are edited and issued from Poona This office also collects and compiles, for the International Commission, the upper air data collected over India, Ceylon, Start Tale Culus, Malaya, the Dutch East Siam, Indo-China, Malaya, the Dutch East Indies, Somaliland and British East Africa

A branch for agricultural meteorology has been sanctioned temporarily and is financed by the Imperial Council of Agricultural Research Its statistical investigations include a critical area and yield of crops for the various presidences and districts in India and, after careful selection, the correlation of some of them with the accumulated meteorological darks. data. On the experimental side, it aims to study microclimatology, evolve suitable instruments for such work, standardize methods of observations and in general undertake a detailed study of the air layer near the ground

(b) Meteorological Office and Observatory, Alipore, Calcutte (F. P. Wi, S. T.)—The Alipore Office serves as a regional foreast centre and is responsible for the publication of the Calcutta Daily Weather Report for stormwarning in the Bay of Bengal and for heavy rainfall warning in north-east India issues weather reports to airmen on routes lying in Burma, Assain, Bengal, Bihar and Orissa and the east United Provinces, on the trans-Indla route, its responsibility extends over the section Allahabad to Victoria Point meet the needs of aviation, an atternoon chart is prepared in addition to the long established morning that, the area of the latter being extended to meet the new needs It has charge of all second, third, fourth and by time ball to Fort William, by wireless to Ahbag, as well as the publication of the magnetic shipping at sea and by telegraphic signal data, is arranged in accordance with the rethroughout the Indian telegraph and railway commendations of the International Commission

systems. It is also a first class weather observatory, pilot balloon observatory and seismological station.

(c) Karachi (F. W¹ P. A)—This office was established primarily as a forecasting centre for aviation. It now issues weather reports for airmen on routes lying along the Persian Gulf and Mekran coasts and in Sind, Rajputana, the Punjab, west United Provinces and north Gujarat On the empire and international air route across India its responsibility extends over the section between Bushire or Bahrein on the west and Allahabad on the east

The forecasting office is temporarily located in Karachi Cantonment and will be transferred to Drigh Road Civil Aerodrome when buildings are provided there. Meanwhile, a first class weather observatory and pilot balloon station have been started at Drigh Road.

The Karachi Office administers all second, third, fourth and fifth class observatories in Persia and Arabia, Baluchistan, the North-West Frontier Province, the Punjab, Sind, Rajputana and the west United Provinces. As the basis of the weather reports and forecasts issued to aviators, it prepares two weather charts daily, drawn up mainly from observations received from the observatories under its own control A daily weather report is also being published, as an experimental measure

- (d) Upper Air Observatory, Agra (U W¹ S) —Agra Observatory is the head-quarters of all pilot balloon work in India 1t is responsible for the maintenance and super-vision of the work of the pilot balloon observatories in India, Burma and the Persian Gull and supplies them with the equipment necessary to carry on their daily observations, these duties have necessitated the provision of a hydrogen factory to make hydrogen gas and compress it into tubes, as well as the provision of a workshop for the design, manufacture and repair of instruments, principally for upper air work. All data from pilot balloon observatories are collected, checked, and statistically summarised at Agra. This observatory is also a principal centre of upper air research work in India. The sounding balloon work there (in the course of which balloons have provided information of conditions up to as great a height as 90,000 feet) has been responsible for most of our present knowledge regarding the free atmosphere over India There is a seismological station attached to this observatory
- (e) Colaba and Alibag Observatories (W¹ S T M)—These observatories specialise in the study of geophysics, particularly terresfifth class observatories, in the area comprising (W S T M)—These observatories specialise Burma and the Bay Islands, Assam, Bengal, in the study of geophysics, particularly terres-Bihar and Orissa and the east United Provinces tall magnetism and seismology, and in addition including the checking and computation of carry on the duties of a first class weather data therefrom It also supplies time signals observatory. The routine magnetic work at

[†] Classified into various classes, the number as it stood on 31st March 1934 would be distributed as follows :-

 $W^1=15$, $W^2=166$, $W^3=86$, $W^4=22$, $W^5=24$ and $W^6=15$.

for Terrestrial Magnetism. The observatories take star or sun observations for the determination of time; and the Colaba Observatory is responsible for the time-ball service at the Bombay Harbour and the rating of chronometers belonging to the Itoyal Indian Navy In recent years researches on atmospheric electricity and microseisms in relation to major wenther phenomena over the sea have also been undertaken there

- (f) Kodaikanal (Sp W¹. S)—The observatory at Kodaikanal specializes in the study of the physics of the sun and is specially equipped for spectroscopic observations and research. The foutine work is decided in accordance with the recommendations of the International Astronomical Union which prevent any serious overlapping of work in the comparatively few solar physics observatories in the world. This observatory also undertakes the duties of a first class weather observatory and a seismological station.
- (4) Quetta and Peshawar (F. W1. P A) Aviation on a regular basis was first started in this country by the Royal Air Force in northwest India, and the need to arrange for local forecasting was first experienced there. Two forecast centres were accordingly started in 1925 at Quetta and Peshawar, each under an R A F Meteorologist who was entrusted with the charge of issuing forecasts of weather over the Lahore-Peshawar-Quetta-Karachi an rontes for R A F acroplanes and detailed local forceasts and warnings each for his own mimediate neighbourhood Route forceast for the Royal Air Force flying over the Punjab, Waziristan, North-West Fronticr Punjab, Waziristan, North-West Product.
 Province, Baluchistan and Sind are issued by these offices The Meteorological Department has been exercising full technical control over the work of the two offices, supplying instru-ments, meeting the cost of the staff of clerk-and observers at each centre and supplying data by telegram from its observatories. An officer seconded from the Indian Meteorological Service but paid by the Royal Air Force is now holding the post of the Meteorologist at Quetta, the office at Peshawar is in charge of a Royal Air Force officer who is under the technical, not administrative control of the Mcteorological Department
- 7 The auxiliary centres are situated at Rangoon, Akyab, Dum Dum*, Allahabad Jodhpur and Drigh Road. The professional or Meteorological Assistant stationed at these centres is authorised to add to the weather report received from the forecasting centres his own conclusions about the local weather situation. The latest information available regarding the local surface conditions and upper winds can also be obtained from lum

MONSOON OF 1935.

fall was in large defect which persisted almost throughout the season

over the Arabian Sca occurred much later than usual. It was incident on the Malabar coast on the 12th June and rapidly extended northwards along the west coast A depression rising off the Konkan coast on the 17th and moving northwards towards Kathiawar strengthened the monsoon in Kanara and Konkan and extending it into the Bombay Deccan also helped to carry vast volumes of moisture-laden air inland provoking widespread thunderstorm rains in Guzrat As the onset of the current however was weak throughout the month, the activity of this branch was mostly confined to the west linear linea coast of the Peninsula.

The monsoon advanced over the Bay of Bengal so far north as the Andaman Sea during the third week in May and carried widespread rains into Lower Burma It extended into Upper Burma by the beginning of June but weakened thereafter and it was not till the end of the third week of the month that its activity reached Bengal and Assam In the last week a low pressure area over the Bay rising off the Orissa-Ganjam coast and moving inland invigorated Gaigam coast and moving inland invigorated feature of the weather of the month towards the current extending the monson rains into librar and Olissa, the central parts of the country east Guzrat and east Rajputana About the end of the month both branches of the current during the month of four Western Disturbances typical of the wint r season but unfavourable to the normal development of the S W current, all other divisions returned more or less large

July the monsoon was established in the United a heavy depression in its passage inland into inches 13 per cent in excess of the normal. Rajputana, further strengthened the monsoon in Orissa, Chota Nagpur, central parts of the country, Gujrat-Rajputana and the United Provinces, and extended it into the Panjab and Sind Under the industries of another decreasing which

The S W. Monsoon of the year was on the up the activity of the Bay current fully over its whole fairly normal in its incidence over the own field of action, and also strengthened the country except in the Sind Division where rain-current over the west coast of the Peninsula which had weakened after the 18th All Divisions of the country were well served during the month, Bengal and Sind only returning deficiency June.—The advance of the monsoon current of 31 and 28 per cent respectively in their rainfall. plains of India was 13,12 inches, 15 per cent in excess of the normal

> August.—The monsoon continued active in the central parts of the country north east India, and Burma under the influence of a Bay depression which crossed the Oussa-Bengal coast on the 5th and advanced inland past Chota Nagpur into East Central India, The current United Provinces and north east India were all well served For a part of the third week it waxed strong in the central parts of the country, Guzerat and Rajputana The monsoon however was generally weak for the flist two weeks over the Peninsula where thunderstorm rains mostly prevailed, and though the current revived in the last week its activity was confined mainly to the west coast An abnormal distribution simulating suspension of all monsoon conditions over the interior of the country was a marked

end of the month both branches of the current revived carrying the monsoon into the United Provinces and temporarily into the Panjab Hills and Kashmere Continued incursions of the Bay on the 6th which passed inland into the Central Provinces, the monsoon waxed strong generally over the whole country except normed a marked feature of the weather of the Northwest India The activity continued till Mysore, and Hyderabad which were well served strong generally court the whole country except month. With the exception of Bombay, Assam, Mysore, and Hyderabad which were well served strong generally court the monsoon weakened over all other distributions. Northwest India The activity continued till deficiences in their ramfall The total rainfall the 18th after which the monsoon weakened over denciences in the India dencience of the month averaged over the plains of India the Peninsula Another low pressure area was 7 61 inches—13 per cent in defect rising off the Orissa-Ganjam coast on the 19th which taking a northerly course filled up over July.—Both branches of the current which had revived during the last week of June main northeast Indla, and local rainfall into Bihat tained then activity and by the first week in and the east United Provinces The S W. monsoon generally weakened therafter an by the Provinces, Rajputana, and Guzerat A Bay end of the month its retreat from the country depression which developed into a storm near was complete Averaged over the plans of the Saugor Island on the 8th and advanced as India the total rainfall for the month was 8 43

October.—Thunderstorm rains typical of the transition period between the cessation of the Under the influence of another depression which S W Monsoon and incursion and establishment formed off the Ganjam coast on the 15th and of the NE monsoon, prevailed during the first crossing the Orissa coast on the 22nd travelled week over the country chiefly over the western crossing the orisis coast on the zeno travened week over the country chiefly over the western inland, good rains were gathered in Orisis, the half of the Pennsula and Burma. The NE contral parts of the country, the north Madras coast, the Decoan, Gujrat, and east Rajputana. In the last week the passage inland of yet a the month. The total rainfall for the month In the last week the passage inland of yet a state of the month of the way in defect by 8 per third low pressure area rising off the Bay kept; cent The total rainfall for the season—June to September—averaged over the plains of India was 40 3 inches, 2 per cent. in excess of the normal. The following table gives detailed information of the seasonal rainfall of the period.

Famine.

nothing is more remarkable than the manner in which great problems arise, produce a corresponding outburst of official activity to meet them and then fall into the background. This general truth is illustrated by a study of the history of famine in India. For nearly forty years it was the bogey of the Indian administration of the indian administration o tor. The forecasts of the rains were studied with acute anxiety. The actual progress of the rains was followed with no less anxiety, and at the first signs of a bad or poor season the famine relief machinery was furnished up and prepared for any emergency. The reason for this is clear if we examine for a brief space the Nearly three-quarters of the people are directly dependent on agriculture for their daily bread. Very much of this agriculture is dependent on the seasonal rains for its existence. Immense areas in the Bombay Presidency, Madras, the United Provinces and Central India are in a region of erratic and uncertain rainfall. The rainy season is short and if for any natural reason there is a weakness, or absence, of the rain-bearing currents, then there is either a poor harvest or no harvest at all. In Western lands everyone is acquainted with the difference between a good and a poor season, but western countries offer no parallel to India, where in an exceptionally bad year wide tracts of thickly populated land may not produce even a blade of grass. In the old days there were no rail-ways to distribute the surplus of one part of India to the districts where the crop had failed. There were often no roads. The irrigation works were few and were themselves generally dependent on the rainfall for their reserves. The people lived from hand to mouth and had no store of food to fal back upon. Nor had they any credit. In the old days then they died. Commencing with the Orissa famine in 1865-67 the Government of India assumed responsibility for the saving of human life in such crises. After the famine of 1899-1900 this responsibility was also shouldered by the Indian States. Stage by stage this responsibility was expressed in the evolution of a remarkable system of fa-mine relier covering the whole field. But now that machinery has reached a remarkable degree of perfection, it is rusting in the official armouries, because the conditions have changed. The whole of India is covered with a network of railways, which distributes the produce of the soil to the centres where food is required. The extension of irrigation has enormously increased the product of the soil and rendered large areas much less dependent on the monsoon rainfall, At the same time the scientific study of the prob-lems of Indian agriculture has raised the capacity of even the "dry" zones. The peasanty has accumulated a certain reserve against the rain-

To the student of Indian administration is lightened the pressure on the soil. The relation of thing is more remarkable than the manner of famine to the question of Indian administrative of the fall into the background, This meral truth is illustrated by a study of the land social problem.

Famine under Native Rule.

Famines were frequent under Native rule, and frightful when they came, "In 1630," says Sir William Hunter, in the History of British India, "a calamity fell upon Gujarat which enables us to realise the terrible meaning of the word famine in India under Native rule, Whole cities and districts were left bare of inhabitants," In 1631 a Dutch merchant reported that only cleven of the 263 families at Swally survived. He found the road thence to Surat covered with bodies decaying on the highway where they died, there being none to bury them. In Surat, that great and crowded city, he could hardly see any living persons, but "the corpses at the corner of the streets lie twenty together, nobody burying them. Thirty thousand had perished in the town alone. Pestilence followed famine." Further historical evidence was adduced by Sir Theodore Morrison in his volume on the Economic Transition of India. It has come to be seen that whilst rallways have checked the old-fashioned practice of storing grain in the villages they have made the reserves, where they exist, available for the whole of India. In india there is now no such thing as a food famine; the country always produces enough food for the whole of the population; famme when it comes is a money famine and the task of the State is confined to providing the means for those affected by drought to earn enough to buy food. The machinery whereby this is done will be examined after we have seen the experiences through which it was evolved.

History of Recent Famines.

Stage by stage this responsibility was expressed in the evolution of a remarkable system of famine relier covering the whole field. But now that machinery has reached a remarkable degree of perfection, it is rusting in the official armouries, because the conditions have changed. The whole of India is covered with a network of railways, which distributes the produce of the soil to the centres where food is required. The extension of irrigation has enormously increased the product of the soil and rendered large areas much less dependent on the monsoon rainfall. At the same time the scientific study of the problems of Indian agriculture has raised the capacity of even the "dry" zones. The peasantry has accumulated a certain reserve against the rainless days from the prospecity which accompanied the period of high prices. The rapid of the co-operative credit movement of the famine of 1893-1900; it is estimated that spread of manufacturing enterprise has famine in Behar in 1873-74, then came the great

South Indian Famine of 1876-78. This affected Provinces, Berar, Bombay, Ajmer, and the Madras, Mysore, Hyderabad and Bombay for two years and in the second year extended to it was intense in Rajputana, Baroda, Central parts of the Central and United Provinces and India, Hyderabad and Kathiawar, It was to a small tract in the Punjab. The total area marked by several distinctive features. The affected was 257,000 square miles and the popural over the whole of India was in extreme lation 58,500,000. Warned by the excessive defect, being eleven inches below the mean. expenditure in Behar and actuated by the desire In several localities there was practically no secure economy the Government relief propriate. There was in consumers a great fodder to secure economy the Government relief programme was not entirely successful. The excess mortality in this famine is said to have been 5,250,000 in British territory alone. Through-

The Famine Codes.

The experiences of this famine showed the necessity of placing relief on an organised basis. necessity of placing relief on an organised basis. The first great Famine Commission which ast under the presidency of Sir Richard Strachey, elaborated the Famine Codes, which amended to meet later experience, form the basis of the tamine relief system to-day. They recommended (1) that employment should be given on the relief works to the able-bodied, at a wage sufficient for support, on the condition of performing a suitable task; and (2) that gratuitous relief should be given in their villages or in poor houses to those who are unable to work. They recommended that the food annow should be recommended that the food supply should be left to private agency, except where that was unequal to the demands upon it. They advised that the land-owning classes should be assisted by loans, and by general suspensions of revenue in proportion to the crop failure. In sending a Famine Code to the provincial governments, the Government of India laid down as the tain health under given circumstances. Whilst the duty of Government is to save life, it is not bound to maintain the labouring population at its normal level of comfort." Provincial and loans given aggregating Rs. 12 crore. The haritable relief fund amounted to about Rs. 12 crore, or which Rs. 14 crore was subscribed in the United Kingdom. The actual famine mortality in British India was estimated at 750,000. The experiences of this famine were examined by a Cormission under Sir James Lyall, which reported that the success attained in saving life and the relief of distress was greater than had ever been recorded in famines, comparable with it in severity, and that the bodied workers; expense was moderate. But before the Local recommended; Governments had been given time to digest for saving cattle. the proposals of this Commission or the people to recover from the stock, the great famine of 1899-1900 supervened.

The Famine of 1899-1900.

rain. There was in consequence a great fodder famine, with a terrible mortality amongst the cattle. The water supply was deficient, and brought a crop of difficulties in its trainout British India 700,000,000 units were relieved. Then districts like Gularat, where famine had at a cost of Rs. 81 crores. Charitable contribeen unknown for so many years that the locabutions from Great Britain and the Colonics lity was thought to be famine immune, were aggregated Rs. 84 lakis. prosperity, clung to their villages, in the hope of saving their cattle, and came within the scope of the relief works when it was too late to save life. A very large area in the Indian States was affected, and the Marwaris swept from their impoverished land right through Central India like a horde of locusts, leaving desolation in their train. For these reasons relief had to be given on an unprecedented scale. At the end of July 4,500,000 persons were supported by the State, Rs. 10 crores were spent on relief, and the total cost was estimated at Rs. 15 crores. The famine was also marked by a widespread acceptance by Indian States of the duty hitherto shouldered by the Government of India alone—the supreme responsibility of saving human life, Aided to save life. A very large area in the Indian responsibility of saving human life. Aided by ioans to the extent of Rs. 31 crores, the Indian States did a great deal to bring then administration into line with that in British India. Although actual deaths from starvation were insignificant, the extensive outbreaks of cholera, and the devastating epidemic of malaria which followed the advent of the rains wage "is the lowest amount sufficient to main- is million. The experiences of this famine tain health under given circumstances. Whilst were collated by the Commission presided over a million. The experiences of this famine were collated by the Commission presided over by Sir Antony MacDonnell. This Commission reported that taking the famine period as a whole the relief given was excessive, and at its normal level of comfort." Provincial as a whole the relief given was excessive, and codes were drawn up, and were tested by the laid down certain modified lines. The cardinal famine of 1896-97. In that 307,000 square feature of their policy was moral strategy. miles were affected, with a population of Pointing out that if the people were assisted 4,000,000. The numbers relieved exceeded at the start they would help themselves, whilst 4,000,000 at the time of greatest distress. The if their condition were allowed to deteriorate cost of famine relief was Rs. 7½ crores, revenue the proceeded on a declining scale, they placed was remitted to the extent of Rs. 1½ crore. The sity of "putting heart into the people." The haritable relief fund amounted to about Rs. 1½ receivers expressed for this purpose was the machinery suggested for this purpose was the prompt and liberal distribution of taccavi loans. the early suspension of revenue, and a policy of prudent boldness, starting from the preparation of a large and expansive plan of relief examined by a Cormission under Sir James and secured by liberal preparations, constant Lyall, which reported that the success attained vigilance, and a full enlistment of non-official in saving life and the relief of distress was help. The wage scale was revised; the minimum wage was abolished in the case of able-bodied workers; payments by results were recommended; and proposals were made

The modern system.

The Government of India are now in posses-This famine affected 475,000 square miles with effects of drought. In ordinary times Govern-population of 59,500,000. In the Central ment is kept informed of the meteorological

conditions and the state of the crops: programmes of suitable relief works are kept upto-date, the country is mapped into relief circles, reserves of tools and plant are stocked If the rains fail, policy is at once declared, It the fains fail, policy is at once declared, non-officials are enlisted, revenue suspended and loans for agricultural purposes made. Test works are then opened, and if labour in considerable quantities is attracted, they are converted into relief works on Code principles. Poor houses are opened and gratutious relief given to the infirm. On the advent of the rains the people are moved from the large works to small works near their rulleges therei. works to small works near their villages, liberal advances are made to agriculturists for the purchase of plough, cattle and seed. When the principal autumn crop is ripe, the few re-maining works are gradually closed and gratuatous relief ecases. All this time the medical staff is kept in readmess to deal with cholera which so often accompanies famine, and ma-iaria, which generally supervenes when the rains break.

Famine Protection.

Side by side with the perfection of the machinery for the relief of famine has gone the development of famine protection. The Fa-mine Commission of 1880 stated that the best, and often the only means of securing protection from the extreme effects of famine and drought, are railways and irrigation. These are of two classes, productive and protective.

Froductive works being estimated to yield profits which will pay interest and sinking fund charges are met from loans; protective works, which do not pay, directly from revenue. In order to guarantee that there should be continuous progress with protective works, the Famine Insurance Grant was instituted in 1876. It was deeded to set apart from the general revenues Rs. 1½ crores annually or private agancy in the country. Then the ryot one million sterling. The first charge on this general revenues Received to the country of the instrument of value, or and the famine relief, the second protective of the instrument of the instrument of value, or and the second protective of the instrument of the instrumen complete. Great progress is being made with protective irrigation. Acting on the advice Decean—the most famine-susceptible district in India—and in the Central Provinces.

Under the Statutory Rules framed under the Government of India Act of 1919, Provincial Governments (except Burma and Assam) are required to contribute from their resources a fixed sum every year for expendi-ture on famine These annual assignments can be expended on relief of famine only, the sum not required for this purpose is utilised in building up a Famine Relief Fund. The Fund provides, as its main and primary object, to expenditure on Famine Relief proper, the word "Famine" being held to cover famine due to drought or other natural calamities.
The balance at the credit of the Fund is reparded as invested with the Governor-General in Council and is available for expenditure on famine, when necessary and, under certain restrictions, on protective and other works for relief of famine.

The Outlook.

Such in brief is the official programme and organisation which has been built up out of the experience and practice of the past. Yet everything goes to show that Government activity to save human life will never be wanted in the future on the colossal scale of forwanted in the future on the colossal scale of former times, even so recently as 1899-1900. Each succeeding failure of the rains indicates that there has been in silent progress an economic revolution in India. In the year 1918 the rains failed more seriously and over a wider area than during any monsoon in the recent history of India. The deficiency in the rainfall was more marked than in the great famine of 1899. Yet such was the increased resisting power of the people that instead of a demand for State relief from over five millions, the maximum number at any time in receipt of the maximum number at any time in receipt of public assistance was never so large as six hundred thousand. The shock to the social life of the community was insignificant; the effects of the drought completely disappeared with the good rains of the following year.

Increased Resisting Power.

The causes of this economic change in the conditions of India, whose influence is widespread are many. We can only briefly indicate them here. There is a much greater mobility in Indian labour. Formerly when the rains failed the ryot clung to ms village until State relief in one form or another was brought almost to his doors. Now at the first sign of the failure of the rains be girds up his loins and goes in search of employment in one of the industrial centres, where the supply of labour is, when general economic conditions are normal, rarely equal to the demand, or on the constructional works which complete. Great progress is being made with and silver bullion in which this is largely liquidprotective irrigation. Acting on the advice ated is distributed all over the country, in small gramme of protective irrigation works has in an emergency. The prodigious coining of been constructed, particularly in the Bombay rupees during the last two years of the war, and the continuous absorption of gold by India, re-present small diffused savings, which take this torm owing to the absence of banking institutions and lack of confidence in the banking system. There has been a large extension of irrigation. More than one-third of the land in the Punjab is now under irrigation, and in other Provinces, particularly in the famine-susceptible tracts of the Bombay Deccan, irrigation works have been constructed, which break the shock of a failure of the rains. The natural growth of the population was for some years reduced by plague and famine diseases, followed by the great influenza epidemic of 1918-19, which swept off five millions of people. This prevented the increase of congestion, but brought some areas of congestion, but brought some areas particularly in the Indian States, below their particularly in the Indian States, below their former population-supporting capacity. (The 1931 census showed an increase of over 30 million in the population since 1921.) The increase of railways distributes the resources of the country with ease; the spread of the co-operative credit movement has Secretary & Treasuret of the Trust. The tmproved rural credit. Finally, there is the endowment of Rs. 32,59,600 above mentioned considerable development of manufacturing is permanently invested and the principal never industry, which is generally short of labour and helps to absorb the surplus of a famine year Whilst the Government is completely equipped with a famine cod , there is no reason to suppose that there will ever recur such an emergency as that of 1899 Famine can now be efficiently met by the liberal distribution of tagavi, the suspension and remission of the land revenue demand, the relief of the aged and others who cannot work, the provision of cheap fodder for the cattle, with possibly some assistance in transporting the affected population of the famine-affected tract to the industrial centres.

The increased resisting power of the people was effectively demonstrated during the famine of 1920-21, which was due to the failure of the monsoon towards the end of the year 1920. The distress which appeared in the end of 1920 persisted during the early months of 1921 and regular tamine was declared in parts of Madras, Bombay, Central Provinces and Baluchistan. Local distress prevailed also in Bengal, Punjab and Central India. The largest number of persons on relief of all kinds did not exceed 0.45 million which was considerably less than 3% of the total population of the area affected by the failure of the monsoon.

The Indian People's Famine Trust.

Outside the Government programme there is always scope for private philanthropy, especially in the provision of clothes, help for depending in the provision of council, near the superior class poor who cannot accept Government aid, and in assisting in the rehabilitation of the cultivators when the rains break At every great famine large sums have been subscribed, particularly in the United Lingdom, for this purpose, and in 1899-1900 the people of the United States gave generous help. With the idea of providing a permanent famine tund, the Maharaja of Jaipur gave in 1900 a sum of Rs. 15 lakhs, in Government securities to be held in trust for the purposes of charit-

constituted under the Charitable Endowment Act 1890. The income of the Trust is administered In 1934 a grant of Rs. 8 lakhs was given by a board of management consisting of 13 for the relief and distress caused by the great members appointed from different provinces Earthquake in Bihar & Orissa and in and Indian States, Sir Ernest Burdon, K.C.I. E., 1935 a grant of Rs 50 000 was given to the C.I., I.C.S., Auditor-General in India, is the Quetta Earthquake Relief operations.

is permanently invested and the principal never taken for expenditure. The income from it is utilised for relief work as necessary and unexpended balances are temporarily invested, so as to make available in years of trouble savings accumulated when expenditure is not necessary. The temporary investments—in Government Securities—at the end of 1935 stood at Rs 3,144-0-0 and the cash balance at the same time was Rs. 23,549-10-8, so that the total available for expenditure at the commencement of 1936 was Rs. 26,70 3-10-8.

The whole conditions to meet which the Trust was founded have changed in recent years. This is the result of the improved policy of Govern-ment in regard to famine relief and of the difference in the meaning of the word famine in consequence of the improvement of transport communications and other factors affected by modern progress. An area stricken by failure of seasonal rains now obtains supplies from other regions in a manner impossible before the development of railways and of modern marketing practice and Government help its people by loans given direct or through Co-operative Societies to tide them over the period of scarcity. The experience of successive visitations of scarcity in different parts of the country also proves that the general economic progress of the people makes them able to meet temporary periods of stress ir a manner formerly unima-ginable. Famine in the old terrible sense of the term has in fact coased to occur. This was well illustrated by the events of 1919, when the land suffered from a failure of the rains more general throughout India and worse in degree than any previously recorded by the Meteorological Department but the crisis was borne with a minimum of suffering. The demands upon the Famine Trust have consequently so greatly diminished in their original sense that hardly any money is now distributed from it for the relief of famine in the proper sense of the word, resulting from rain failure and expenditure has resulting from rain failure and expenditure has mainly become grant of assistance to sufferers from floods. The total expenditure upon real famine in the old sense was only Rs. 28,10 000. During 1934 it increased further of Rs. 28,10 000. During 1934 it increased further of Rs. 32,59,600 the invested balances of the inted Provinces Famine Orphan's fund being transferred to the Trust It is officially called the Indian People's Famine Trust, and was constituted under the Charitable Endowment Act.

Hydro-Electric Development.

India promises to be one of the leading countries of the world in regard to the development of hydro-electric power and great strides in this direction have afready been made. India not only specially lends itself to projects of the kind, but peremptorily demands them. Cheap motive power is one of the secrets of successful industrial development and the favourable initial conditions caused by the war, the enthusiasm for industrial development which has seized nearly all classes of educated Indians, and the special attention which the circum-stances of the war have compelled Government to direct towards the scientific utilisation of Indian natural resources all point to a rapid growth of industrial enterprise in all parts of India within the next few years. Indeed, the process, for which sound foundations had been faid before the war, is now rapidly under way.

India is severely handicapped compared with other lands as regards the generation of power by the consumption of fuel, coal or oil. These commodities are all difficult to obtain, and costly in India except in a few favoured areas. Coal supplies, for example, are chiefly centred in Bengal and Chota Nagpur and the cost of transport is heavy. Water power and its transmission by electricity offer, on the other hand, immense possibilities, both as regards the quantity available and the cheapness at which the power can be rendered, in all parts of India.

water power schemes, pure and simple, are generally difficult in India, because the power needs to be continuous, while the rainfall is only during a small portion of the year. Perennial rivers with sufficient water throughout the year are practically non existent in India. Water, therefore, must be storred for use during the dry season. Favourable sites for this exist in many parts in the mountainous and hilly regions where the heaviest rainfalls occur and the progress already made in utilising such opportunities by the electrical transmission of power affords high encouragement for the future. Further, hydro-electric schemes can frequently be associated with important irrigation projects, the water being first used to drive the turbines at the generating stations, and then distributed over the fields.

The Industrial Commission emphasized the necessity for a Hydrographic Survey of India. On this recommendation the Government of India in 1918 appointed the late Mr. G. T. Barlow, C.I.E., then Chief Engineer, Irrigation Branch, United Provinces, to undertake the work, associating with him Mr. J. W. Meares, M.I.C.E., Electrical Adviser to the Government of India. Mr. Barlow died, but Mr. Meares issued a preliminary report in September, 1919, summarising the state of knowledge of the problem in India and outlining a programme of investigation to be undertaken in the course of the inquiry. Mr. Meares showed that industries in India absorbed over a million horse

power, of which only some 285,000 h. p. 18 supplied by electricity from steam, oil or water the water power so far actually in sight amounts to 11 million horse-power, but this excludes practically all the great rivers, which are at present uninvestigated. Thus the minimum flow of the seven great rivers eastward from the Indus is stated to be capable of giving not less than three million horse-power for every thousand feet of fall from the Himalayas, while similar considerations apply to rivers in other parts. Some doubt is expressed as to the estimate of seven million horse-power in the Irrawaddy and Chindwin rivers, given in the report of the London Conjoint Board of Scientific Studies.

The Report points out that the Bombay Presidency holds a unique position owing to its great existing and projected schemes at Lonavia, the Andhra Valley, the Nila Mula and the Koyna Valley and has the still greater advantage of possessing a firm ready to develop its resources.

Bombay Hydro-Electric Works.

The greatest Hydro-Electric undertakings in India are the three schemes developed and brought into operation by Tata Sons, Ltd, and continued under their management until 1929, when they were transferred to the management of the Tata Hydro Electric Agencies, Ltd, in which Messrs. Tata Sons retained a substantial interest. These undertakings are:—

- (a) The Tata Hydro Electric Power Supply Company, Ltd. . . Started in 1915.
- (b) The Andhia Valley
 Electric Power Supply Company, Ltd. ,, ,, 1922.
- (c) The Tata Power Company, Ltd . . , , , , , , , , , , 1927.

 These Hydro Electric schemes have a combined normal capacity of 246,000 H P and provide electrical energy for the City of Bombay, Bombay suburbs, Thana, Kalyan and Greater

Bombay, after London, is the second largest City in the British Empire and is the largest manufacturing centre in India 1ts population including suburbs at the 1931 census was 1,326,313 with a total population of approximately 1,600,000 in all of the areas served by these companies. Its cotton mills and other factories consume about 150,000 H.P., which until these Hydro Electric schemes came into operation, was entirely produced by thermal stations using fuel coming from great distances.

The favourable position of the Western Ghats which rise to a height of more than 2,000 feet above sea-level within a few miles of Bombay City, situated on the shores of the Arabian sea with their heavy rainfalls was taken full advantage of for providing Bombay City and vicinity with an adequate and economical power supply.

The hydraulic works of the Tata Hydro Electric Power Supply Company are situated near Lonavia at the top of the Bhor Ghats. The monsoon raintall is stored in three lakes, namely, Lonavia, Walwan and Shirawta, from which it is conveyed in open masonry canals to the lakes of the the Forebay at Khandala and thence through steel pipes to the Power House at Khopoli at the ioof of the Ghats, where the head at turbine nozzles is 1,750 feet or approximately 750 lbs per sq inch The normal capacity of the Power Station at Khopoli 148,000 KW or 64,300 H.P. This scheme was formally opened by H E The Governor of Bombay on the 8th of February 1915.

Investigations in 1917-18 led to the discovery of a site on the Andhra River just to the North of the Tata Hydro Electric Supply Company's of the Tata Hydro Electric Supply Company's lakes, where an additional 48,000 KW (or 64,300 HP) could be developed These investigations resulted in the formation of the Andhra Valley Power Supply Co and the construction of the schemes, the principal features of which consist of a reservoir formed by a dam about 190 feet high, across the Andhra River and a turnel 8,700 feet the Andhra River and a tunnel 8,700 feet long driven through solid trap rock to the scarp of the Ghats, from which the water is taken in steel pipes 4,600 feet long to the turbines in the generating station at Bhivpuri The head of water at turbine nozzles is 1,750 feet or approxi-mately 750 lbs. per sq inch The electrical energy is transmitted to Bombay over a transmission line 56 miles long for augmenting the supply from Khopoli.

The Tata Power Company's scheme on the Nila-Mula River to the South-East of Bombay was investigated and developed along lines similar to the Andra Valley scheme and has a normal installed (apacity of 87,500 KW or 117,000 HP. The power is transmitted to Bombay over a transmission line 76 miles long and is used to augment the supply of the two carber companies to mills, factories and tailways.

The Tata Hydro Electric Power Supply Co The Andhra Valley Power Supply Co. and the Tata Power Company operating as a unit under one management supply the whole of the electrical energy required by the Bombay Electric Supply & Tramways Co Ltd, the majority of the mills and industries in Bombay ('ity, the B B & C I Railway for their suburban electrification the whole of the energy required by the G I P. Railway in Bombay City and for their main line traction up to Kalyan, the whole of the electrical energy required by the Poona Electric Supply Company and the distributing licensees in Thana, Kalyan and the Bombay suburbs.

These three schemes operating as a unit under one management provide an adequate and economical power supply in the areas mentioned above for all purposes. The rate for energy delivered to the Mills, Factories and Railways lass, for several years, shown a steady decrease and now expenses. 51 of a game park part with the control of the and now averages 0.51 of an anna per unit, which downward trend will continue as industries develop and individual consumptions increase

and Tramways Company has shut down its steam-driven generating plant and now takes its supply in bulk from the various Tata companies is of note, and it is of more than passing interest to note that the Poona Electric Supply Company has recently adopted a similar course. This is a phase of hydro-electric distribution which is quite in its infancy in India, but it is possible to foresee the time when every village within a couple of hundred miles of a hydro-electric power station will receive its supply of electric current in bulk, thus greatly reducing capital and administrative charges and minimising the price of current to the consumer. It is a system which has become some-thing of a fine art in California, where current is transmitted by overhead wires for many hundreds of miles at a pressure of 200,000 volts or double the pressure commonly employed in India for overhead long-distance transmission.

Mysore Hydro Electric Works.

The first Hydro Electric Scheme of any magnitude undertaken in India or indeed in the East, was that on the Cauvery River in Mysore State, which with its generating station, transmission line and distributing system was inaugurated in 1902.

The Cauvery River rises in the district of Coorg in the Western Ghats and flows across Mysole State. The principal object of this scheme was the supply of power to the Mining companies on the Colar Gold Field, about 92 miles from Susasmudram, the site of the generating station. This transmission line was for a number of years the longest line in Asia. Since 1902 the supply of electrical energy from Sivasamudram has been provided for Pangalore and Mysore cities and about 200 other towns and villages in the South-Eastern Half of the State

The initial undertaking has constantly been expanded so that its total capacity now stands at 46,000 E H P This is the maximum obtainable from the water available. This great increase has been made possible by the construction of the Krishnarajasagar reservoir near Mysore City, which has a capacity of 44,000 million cubic feet of storage above the minimum draw off.

The number of the consumers of all classes continues to increase rapidly every year with greatly increased demands. The Government of Mysore have encouraged this growth in the use of electrical energy and have made a survey of Hydro Power resources of the State and prepared plans for the construction of a second generating station at the most economical site.

The more important sites where a Hydro Electric power station can be constructed are Mekadatu, the Shimshaw Falls, the Krishnaraja-sagar and the Jog Falls (the Gersoppa Falls) These power sites provide Mysore State with ample hydro power resources to meet the re-quirements of the State for a long time to come.

Works in Madras.

The Pykara Hydro-Electric Scheme an undertaking of the Madras Government, was commenced at the end of 1929, the first stage of the project being completed at the end of 1932. The waters utilised for the development of the scheme are taken from the Pykara river which drains from the Nilgiri Plateau having a catchinent area of nearly 42 sq miles. The average rainfall in the area is 110 in per ainmin, the rainfall varying considerably at various points.

The natural head available exceeds 4,000 ft which is higher than any other in the British Empire of America. A number of suitable reservoir sites are available with a total capacity of about 3,000,000,000 cuble ft, which will be utilised as required by the loadgrowth. With full storage, 90,000 H P can be developed in addition to the 30,000 H P irom the tail water at a lower site where a further drop of 1,000 ft can be obtained

The present head utilised is only 3,080 ft, developing a maximum of 22,000 HP. A large forchay of 58,000,000 cubic ft capacity and another reservoir of 26,000,000 cubic feet provide the requisite storage. Water from the intake of the river is led by a flume to the forchay from whence it is led through a single steel pipe to a surge pipe at the head of the peristock consisting of two pipes, each in three sections of 27 in , 24 in , and 21 in in diameter and 9,100 ft in length

Three sets of direct coupled turbo-generators of 10,900 H P each generato 3 phase, 50 evcles, 11 000 volts, which is taken through 110/66/11 K V, 7,810 K V A transformers and switchgear in the varied of the generating station, and transmitted to the receiving station at Combator 50 miles away by a double circuit transmission lines.

The enumering features of the Mettur Hydro Electric Scheme provide an interesting contains to the Pykara Hydro Electric Scheme now in operation. The Mettur (Stanley) Dam, one of the largest structures of its kind in the world, is 176 feet high and can impound a total of 93,500 million cubic feet of water. This storage is primarily for intigation purposes, but the water let down for irrigation is also to be utilised to the best advantage for the generation of hydro-electric power.

During the construction of the dam four pipes 8-6 feet in diameter were built into the structure and equipped with the necessary valves, gates, screens, and other littings. The function of these pipes was for surplussing from the reservoir during the latter part of the construction period, and for power generation afterwards Each of these pipes represent about 15,000 horse-power awaiting development. Each pipe is designed to discharge a maximum of 1,250 cusees for power purposes.

The operating head will vary from 160 feet at full reservoir level to a normal minimum of 80 feet. The average head will be 135 feet. Under such water conditions a minimum demand of 19,200 or 7,680 H P. continuous may be met without the assistance of other plants.

It is proposed to instal four double horizontal Francis turbo-generator sets of 15,000 horse-power each, one of which will be spare. Only two units are to be provided at first, the third will be added in the third, and the fourth in the seventh year of operation, should load conditions justify the additional generating capacity.

The original scheme included four single vertical units of 13,000 horse-power each but the Consulting Engineers to the Secretary of State for India preferred the arrangement outlined above and their recommendation was adopted. The plant when completed will thus be capable of a maximum output of 60,000 horse-power.

The generators will operate at 11,000 volts, 50 cycles, having a normal rating of 12,500 K V A cach. They will be specially designed for transmitting power eventually to Madias

Works in Kashmir.

A scheme of much importance from its size, but more interesting because of the developments that may be expected from it than for the part which its current supply already plays in the life of the countrys, it is one lustalled a few years ago by the Kashmir Durbar, utilising the River Jheium, near Baramulla, which lies thirty-four miles north-west of Srinagar. The head works of the Jhelum power installation are situated slx and a half miles from the power house and the main connection between the two is a great timber flume. These works and the forebay at the delivery end of the flume have a capacity for carrying water sufficient for the generation of 20,000 electrical horse power. Four pipes 600 feet longlead from the forebay to the power house, and from fore bay to water-wheel there is an effective head of 395 feet. There are four vertical waterwheels, each coupled on the same shaft to a 1,000 k.w., 3-phase, 2,300 volt, 25-period generator running at 500 r.p.m., and each unit is capable of taking a 25 per cent, overload, which the generator end is guaranteed to maintain with safety for two hours. The power house is of sufficient capacity to allow of 15,000 k.w. generating plant being lustalled within it. Two transmission lines run side by side as far as Baramulla, 21 miles distant, at which point one terminates. The other continues to Srinagar, a further 34 miles. The installation at Baramulla was originally utilised for three floating dredgers and two floating derricks, for dredging the river and draining the swampy countryside and rendering it available for cultivation The lighting of Baramulla has been taken in hand with satisfactory results and it is expected that the lighting demand will rapidly Increase and that a small demand for power will soon spring up. At Srinagar, the line terminates at the State slik factory, where current is supplied not only for driving machinery and for lighting, but for heating. The greater part of Srinagar city is now electrically lighted.

Recent Progress.

Apart from the development of the projects outlined above, the past few years have witnessed comparatively little progress in hydro-electric

works. The Mandi Project in the Punjab, which [works. The Mandi Project in the Punjab, which utilises the water of the Uli Prive for the generation of power with which a large number of towns in that province will be electrified came into operation in 1933. The scheme has been formulated in three stages. The first is the develop 48,000 horse-power from the ordinary discharge of the river; the second involves the formation of a storage reservoir by the districts of Kalimpong and Kurseong, for construction of a dam and would double the example, it is proposed to harness a promising electrical output; whilst the third would utilize water never the and completed and put into appearance of peration at Naim Tal during 1923, and the effection of another small plant was completed and put into poperation at Naim Tal during 1923, and the effection of another small plant was completed and put into poperation at Naim Tal during 1923, and the effection of another small plant was completed and put into operation at Naim Tal during 1923, and the effection of another small plant was completed and put into the town of peration at Naim Tal during 1923, and the effection of another small plant was completed and put into the town of Naim Plant was completed and put into the town of Naim Plant was completed and put into the town of Naim Plant was completed and put into the town of Naim Plant was completed and put into the town of Naim Plant was completed and put into the town of Naim Plant was completed and put into the town of Naim Plant was completed and put into the town of Naim Plant was completed and put into the town of Naim Plant was completed and put into the town of Naim Plant was completed and put into the town of Naim Plant was completed and put into the town of Naim Plant was completed and put into the town of Naim Plant was completed and Naim Plant was completed and the town of Naim Plant was completed and the town of Naim Plant was completed and the town of Naim Plant was completed and the town of Naim Plant was completed and the town of Naim Plant was completed a electrical output; whilst the third would utilize electrical output; whist the third would using the same water several miles down-stream and provide an additional 64,000 horse power. Another interesting piojectis the hydro-electric grid scheme in the United Provinces which time appeared to be one of the most prowill carry electric power to a large number of towns and villages and will, it is anticipated, disable the state of the most promising propositions in the country, but owing to towns and villages and will, it is anticipated, disable the behavior of weather and the state of the same water several makes the state of the same water several makes and which the same water several makes and the state of the same water several makes and the state of the same water several makes and the same water assist greatly in the development of rural areas. finitely shelved.

A small plant was completed and put into water-power site and to supply current to an important area in which are situated more than

Local Self-Government.

subjects transferred to Indian ministers, and under their leadership considerable developments have been essayed. On the whole, the progress of local government in India for the past quarter of a century has been disappointing. The greatest successes have been won in the Presidency towns, and particularly by the Municipality of Bombay. The difficulties in the way of progress were manifest. Local government had to be a creation -the devolution of authority from the Government to the local body, and that to a people who for centuries had been accustomed to autocratic administration. Again, the powers entrusted to local bodies were insignificant and the financial support was small. There are however many indications that the dry bones of the mofussil are stirring.

Throughout the greater part of India, the village constitutes the primary territorial unit of Government organisation, and from the villages are built up the larger administrative titles-tabsils, sub-divisions, and districts.

"The typical Indian village has its central residential site, with an open space for a pond and a cattle stand. Stretching around this nucleus lie the village lands, consisting of a cultivated area and (very often) grounds for grazing and wood-cutting... The inhabitants of such a village pass their life in the midst of these simple surroundings, welded together in a little community with its own organisation and government, which differ in character in the various types of villages, its body of detailed customary rules and its little staff of functionaries, artisans and traders. It should be noted, however, that in certain portions of India, e.g., in the greater part of Assam, in Eastern Bengal, and on the west coast of the Madras Presidency, the village as here described does not exist, the people living in small collections of houses or in separate homesteads."-(Gazetteer of India.)

The villages above described fall under two main classes, viz .-

Types of Villages.—"(1) The 'severalty' or ralyatwari village which is the prevalent form outside Northern India. Here the revenue is assessed on individual cultivators. There is no joint responsibility among the villagers, though some of the non-cultivated lands may be set apart for a common purpose, such as graz-ing, and waste land may be brought under the plough only with the permission of the Revenue authorities, and on payment of assessment. The village government vests in a hereditary headman, known by an old vernacular name, such as patel or reddi, who is responsible for law and order, and for the collection of the Government revenue. He represents the primitive headship of the tribe or clan by which the village was originally settled."

" (2) The joint or landlord village, the type prevalent in the United Provinces, the Punjab years, will require great care and discretion, and the Frontier Province. Here the revenue much patience, and judicious discrimination was formerly assessed on the village as a whole, between the circumstances of different villages:

A field of the administration of India its incidence being distributed by the body of profoundly affected by the Reforms of 1919 is superior proprietors, and a certain amount of that of local government. This is one of the collective responsibility still as a rule remains The village site is owned by the proprietary body, who allow residences to the tenantry, artisans, traders and others. The waste land is allotted to the village, and, if wanted for cultivation, is partitioned among the shareholders. The village government was originally by the punchayet or group of heads of superior families. In later times one or more headmen have been added to the organisation to represent the village in its dealings with the local authorities; but the artificial character of this appointment, as compared with that which obtains in a railyatwar village is evidenced by the title of its holder, which is generally lambardar, a vernacular derivative from the English word 'number.' It is this type of viliage to which the well-known description in Sir H. Maine's Village Communities is alone applicable, and here the co-proprietors are in general a local oligarchy with the bulk of the village population as tenants of labourers under them."

> Village Autonomy.—The Indian villages formerly possessed a large degree of local autonomy, since the native dynastics and their local representatives did not, as a rule, concern themselves with the individual cultivators, but regarded the village as a whole, or some large landholder as responsible for the payment of the Government revenues, and the maintenance of local order. This autonomy has now disappeared owing to the establishment of local, civil and criminal courts, the present revenue and police organisation, the increase of com-munications, the growth of individualism, and the operation of the individual raigativari system, which is extending even in the north of India Nevertheless, the village remains the first unit of administration; the principal village functionaries—the headman, the accountant, and the village watchman—are largely utilised and pald by Government, and there is still a certain amount of common village feeling and interests.

> Punchayets.—For some years there was an active propaganda in favour of reviving the village council-tribunal, or Punchayet and the Decentralisation Commission of 1908 made the following special recommendations:

"While, therefore, we desire the development of a punchayet system, and consider that the objections urgod thereto are far from insurmountable we recognise that such a system can only be gradually and tentatively applied, and that it is impossible to suggest any uniform and definite method of procedure. We think that a commencement should be made by giving certain limited powers to *Punchayets* in those villages in which circumstances are most fa yourable by reason of homogeneity, natural intelli-gence, and freedom from internal feuds. These powers might be increased gradually as results warrant, and with success here, it will become easier to apply the system in other villages. Such a policy, which must be the work of many

and there is a considerable consensus of opinion that this new departure should be made under the special guidance of sympathetic officers."

This is, however, still mainly a question of future possibilities, and for present purposes it is unnecessary to refer at greater length to the subject of village self-government. Various measures have been passed, but it is too early to say what hie they have. The Punjab Government has passed a Village Punchayat Act, which enables Government to establish in a village, a system of councillois tradition of councillois and the state of councillois traditions are the least system of councillois. to whom certain local matters, including judicial power, both civil and criminal of a minor character, may be assigned. In Bihar a Village Administration Act has been passed for the administration of village affairs by villagers themselves, including minor civil and criminal cases Other Governments are taking steps in the same direction.

Municipalities.--The Presidency had some form of Municipal administration, first under Royal Charters and later under statute from comparatively early times, but outside of them there was practically no attempt at municipal legislation before 1842. An Act passed in that year for Bengal, which was practically inoperative, was followed in 1850 by an Act applying to the whole of India Undei this Act and subsequent Provincial Acts a large number of municipalities was formed in all provinces. The Acts provided for the appointment of commissioners to manage mumcipal affairs, and authorised the levy of various taxes, but in most Provinces the commissioners were all nominated, and from the point of view of self-government, these Acts did not proceed far. It was not until after 1870 that much progress was made. Lord Mayo's Government, in their Resolution of that year introducing the system of provincial finance, referred to the necessity of taking further steps to bring local interest and supervision to bear on the management of funds devoted to education, sanitation, medical, charity, and local public works. New Municipal Acts were passed for the various Provinces between 1871 and 1874, which, among other things, extended to the elective principle, but only in the Central Provinces was popular representation generally and successfully introduced. In 1881-2 Lord Ripon's Government Issued orders which had the effect of greatly extending the principle of local self-government. Acts were passed in 1883-4 that greatly altered the constitution, powers, and functions of muni-cipal bodics, a wide extension being given to the elective system, while independence and responsibility were conferred on the committees of many towns by permitting them to elect a private citizen as chairman. Arrangements were made also to increase municipal resources and financial responsibility, some items of provincial revenue suited to and capable of development under local management being transferred, with a proportionate amount of provincial expenditure, for local objects. The general principles thus laid down have continued to govern the administration of municipalities down to the present day.

hmits Of these municipalities, roughly 710 have a population of less than 50,000 persons and the remainder a population of 50,000 and over. As compared with the total population of particular provinces, the proportion resident within municipal limits is largest in Bombay, where it amounts to 20 per cent., and is smallest in Assam where it amounts to only 2 per cent. In other provinces it varies from 4 to 9 per cent, of the total population. Turning to the composition of the municipalities, considerably more than half of the total numbers are elected and there is a steady tendency to increase this proportion. Ex-officio members are only 7 per cent. and nominated 25 per cent. Elected members are almost everywhere in a majority. Taking all numericalities together, the non-officials outnumber the officials by nearly six to one. The functions of municipalities are classed under the heads of Public Safety, Health, Convenience and Instruction. For the discharge of these responsibilities, there is a municipal income of Rs. 14 03 erores derived principally from taxation, just over one-third coming from municipal property, contributions from provincial revenues and miscellaneous sources Generally speaking, the income of municipalities is small, the four cities of Calcutta, Bombay, Madias and Rangoon together providing over 40 per cent, of the total. The heaviest items of this expenditure come under the heads of "Conservancy" and "Public Works" which amount to 14 per cent, and 18 per cent, respectively, "Water-supply" comes to 13 per cent, "Drainage" to 4 per cent, and "Education" to over 11 per cent. In some localities the expenditure on education is considerably in excess of the average. In the Bombay Presidency, excluding Bombay City, for example, the expenditure on education amounts to more than 21 per cent, of the total funds, while in the Central Provinces and Berar it is over 17 per cent.

District Boards.—The duties and functions assigned to the municipalities in urban areas are in rural areas entrusted to district and local Boards In almost every district of British India save in the province of Assam, there is a board subordinate to which are two or more sub-district boards; while in Bengal, Madras and Bihar and Orissa, there are also Union Committees. Throughout India at large there are some 207 district boards with 584 sub-district boards besides 455 Umon Panchayats in Madras. This machinery has jurisdiction over a population which was over 221 millions in 1930-31. Leaving aside the Union Committees and Union Boards or Panchayats the members of the Boards numbered over 16,000 in 1930-31, of whom 73 per cent. were elected. As in the case of municipalities the tendency has been throughout India to mercase the elected members at the expense of the nominated and the official members. The Boards are practically manned by Indians, who constitute 96 per cent, of the whole membership. Only 11 per cent. of the total members of all boards are officials of any kind. The total income of the Boards in 1980-31 amount-The Present day.

ed to Rs. 16 57 crors, the average income of

In some cases the necessity for retrenctions of the control of t years and civil works such as roads and bridges, ment was immediate, resulting in the curtail-Medical relief is also sharing with education ment of medical relief and of allotments for the though in a less degree the lion's share of the ordinary repairs of roads. Additional taxation available revenue

feature Improvement Trust.—A notable in the recent sanitary history of India is the activity played by the great cities in the direction of social improvements. In Bombay and Calcutta the Improvement Trusts developed important activities which are described in a separate chapter (q v.). In Bombay the work of the Improvement Trust is carried forward by the Bombay Development Directorate. Other cities are beginning to follow the examples of these great cities and Improvement Trusts were constituted in Cawipore, Lucknow and Allahabad in the United Provinces and in several of the larger cities of the Provinces of India Their activities were, however, severely cur-tailed by the financial stress.

Provincial Progress.—There was passed in Bengal in 1919 a Village Self-Government Act embodying the policy of constituting Union Boards at the callest possible date for groups of villages throughout the province. The number of these boards continues to increase, rising from 1,500 to more than 2,000. In 1930-31 the number of Union Boards rose to 4,510 There are also 12 Union Committees Though they are in their infancy as yet, many of them show a remarkable aptitude for managing them own affairs.

In Bombay the development of village selfgovernment is also proceeding, as the result of an Act for constituting, or mereasing the power of village committees which was passed in 1920 by the Legislative Council In this presidency, some 145 out of 155 municipalities had a two-thirds elected majority of councillors in the year 1930-31; and a distinct step forward has been projected by the administration in the direction of liberalizing the constitution of all munici-pal bodies. The policy of appointing a non-phologometric policy of appointing a non-official president has been extended both to pal committees are still lax in the discharge district and sub-district boards, and a large number of non-officials have also been appointed presidents of sub-districts (taluka) boards. In Madras also the institutions of local self-government continued to progress in an encouraging manner. The number of district boards in the Presidency in 1931 was 25 with 1,005 members. The number of sub-district boards was 130. The total number of Municipal Councils during the year 1930-31 continued to be 81 and the proportion of Indian to European and Anglo-Indian members further increased. In 1930-31 there were 54 municipal councils, consisting entirely of Indian members, as against 51 in the previous year. The average imposition of taxation per head of population is still very low, being only about Rs 2-8

In the United Provinces the new District ordinary repairs of roads. Additional taxation has so far not been generally imposed and the Boards are still suffering from inexperience in husbanding public money and obtaining the full value for their expenditure. In the case of Municipal Finances, there has been some change for the better. The new municipalities have shown a great interest in all forms of civic activity but they are still hampered in their work by political and communal obsessions. They are reluctant to impose new taxation but a considerable programme of expenditure lies before

In the Punjab municipal administration continued to show improvement, the general attitude of the members in regard to their responsibilities being promising for progress in the future. Generally speaking the finances are in a more satisfactory position than was the case in previous years. Expenditure on water-supply schemes is steadily increasing

In the Central Provinces, the year 1920 witnessed the passing of a Local Self-Government Act intended to guide into proper channels the undoubtedly growing interest in public matters. The continued reduction of official members and chairman, and the wider powers of control given to local bodies have been an incentive to the development of local self-government, leading to an increased sense of public duty and responsibility. Another very important measure regulating municipalities was passed into law in 1922 Its chief features are the extension of the Municipal franchise, the reduction of official and nominated members, the extension of the powers of Municipal Committees and the relaxation of official control.

In the North-West Frontier Province, the of their responsibilities, and meetings are reportod to be infrequent, but the attendance of non-official members is gradually increasing. Concerning Municipal administration the Local Government reports that the members continue to take a very great interest in their duties and that their attitude towards the responsibility is imposed upon them is on the whole satisfactory. Communal feeling shows itself in certain localities; but is in many instances off-set by the public spirit and initiative of individual members and there are considerable symptoms of advance in independence of action and in the smooth working of the Committees. An important extension of the elective principle has recently been made and it is hoped that this is proving a success.

Calcutta Improvement Trust.

The Calcutta Improvement Trust was instituted by Government in January, 1912, with a view to making provision for the improvement and expansion of Calcutta by opening up congested areas, laying out or altering streets, providing open spaces for purposes of ventilation or recreation, demolishing or constructing buildings and re-housing the poorer and working classes displaced by the execution of improvement schemes.

The origin of the Calcutta Improvement Trust must, as in the case of the corresponding Bombay body, upon which the Calcutta Trust was to a large extent modelled, be looked for in a medical enquiry which was instituted into the sanitary condition of the town in 1896, owing to the outbreak of plague. It was estimated that the Trust might in the ensuing 30 years have to provide for the housing of 225,000 persons. The population of Calcutta proper, which includes all the most crowded areas, was 649,995 in 1891, and increased to 801,251, or by 25 per cent., by 1901. The corresponding figure according to the 1921 Census was 993,508 and this had increased by 1931 to 1,196,734.

The problem of expansion was difficult, because of the peculiar situation of Calcutta, which is shut in on one side by the Hooghly and on the other by the Salt Lakes.

Preliminary investigations continued for several years, so that it was only in 1910 that legislation was eventually introduced in the provincial legislature and the Trust instituted by it. The Bill provided for a large expenditure on improvement schemes and the provision of open spaces and for special local taxation to this end. It also provided for the appointment of a wholetime chairman of the Board of Trustees and the membership of the Trust was fixed at eleven.

The following constituted the Board of Trustees at 31st March 1934:—Mr. J. A. L. Swan, C.S.I., C.I. E., I C.S., Chairman; Mr. Mukherjea, Bar-at-Law, Chief Executive Officer, Calcutta Corporation (ex-officio), Mr. S. C. Ghosh, elected by the Corporation of Calcutta under Section 7 (1) (a) of the Calcutta Improvement Act, 1911; Mr. Prabhudayal Himatsingh, elected by the elected Councillors, Corporation of Calcutta, under Section 7 (1) (b) of the of Calcutta, under Section 7 (1) (b) of the Calcutta Improvement Act, 1911, as modified by the Amendment Act of 1926; Mr. Charu Chandra Biswas, C.I.E., elected by Councillors other than elected Councillors of the Corporation other than elected Councillors of the Corporation of Calcutta, under Section 7 (1) (c) of the Calcutta, under Section 7 (1) (c) of the Calcutta Improvement Act, 1911, as modified by the Amendment Act of 1926; Mr. W. H. Thompson, elected by the Bengal Chamber of Commerce; Sir Hari Sankar Paul, Kt., elected by the Bengal Chamber of Commerce; Sir Hari Sankar Paul, Kt., elected by the Bengal National Chamber of Commerce; by opening up new roads and widening the Mr. Unsud Dowla, Sir Badridas Goenka, kt., O.I.E., Rai Bahadur Dr. Haridhan Dutt, Maydapati, Scheme No. XXVII.

During the 22 years that it has now been at work, the Trust have decided, and partly or entirely carried through, many improvement schemes for opening up congested areas, laying out or widening streets and providing oren Spaces.

In Central Calcutta many highly insanitary bustees have been done away with and several roads of an improved type laid out, the most important of which is the Chittaranjan Avenue, 100 tt. wide, which at present extends from Beadon Street to Chowringhee, Shambazar It is intended ultimately to extend it up to the Chitpur Bridge. But at present there is no direct connexion between Chitpur Bridge and the Barrackpore Trunk Road, as Lockgate Road has been severed by the sidings of the Eastern Bengal Railway. In these circumstances the Board considered that traffic would be better served by postponing the extension to Chitpur Bridge and constructing a road to Shambazar which is the terminus of the Barrackpore Trunk Road and of the Dum-Dum-Jessore Road. A scheme known as Scheme No. XXXVII has been sanctioned by Government under Section 48 of the Calcutta Improvement Act which provides inter alia for the extension of Chittaranjan Avenue up to Raja Rajballab Street and for the construction of a new 84 feet new road connecting it with Cornwallis Street. The Section of Chittaranjan Avenue near the Chowringhee end is well placed for commerce and trade and is likely before long to gain increased importance by being linked up with Dalhousle Square on the West by means of a new road 84 feet wide which the Trust propose to construct between Mission Row and Mangoe Lane. A further extension of this road from Chittaranian Avenue to Wellington Street on the east was sanctioned by Government after the close of the year.

In the north of the City, two large and thirteen small parks have been constructed in different quarters. Of the two large parks one is named Deshabandhu Park and the other Cossinore-Chitpore onen space Cossipore-Chitpore open space measuring 53 bighas and 156 bighas respectively. The Cossipore-Chitpore Park has a small artificial lake and the layout of the area surrounding the lake has been completed. Four football grounds have been provided for schools and clubs of North Calcutta. Some tennis courts are also being made. The Deshabandhu Park has also been provided with play-grounds. Several wide roads have been driven through

The new 84 ft. road connecting Chittaranjan Avenue with Strand Road slightly to the north of Jagannath Ghat has been completed so that there is now a continuous main traffic route with the same width of roadway as Chittaranjan Avenue, extending right across Calcutta from Strand Road on the west to Upper Circular Road on the east. The widening of Maniktala Road between Upper Circular Road and Maniktala Bridge which has been completed forms a further extension of this main roadway which will eventually continue at a width of 100 ft. to the extreme eastern limit of Maniktala. Another important scheme which is now complete is the new 60 ft. road between Darpanarayan Tagore Street and Pathuriaghat Street which, with its side roads, opens up a very congested area and forms a portion of a main projected north and south road through Bara Bazar from Harrison Road to a new main east-and-west diagonal road through Ahirtfoliah.

The passing of the Calcutta Improvement (Amendment) Act, 1931, which empowers the Board of Trustees in certain cases to levy betterment fees on properties which abut on to a new or widened street instead of acquiring the properties has made it financially possible for the Trust to proceed with some portion of its original programme for the improvement of Bara Bazaar. The Kalakar Street scheme in Bara Bazaar which forms the southern section of the aforesaid road is one of the schemes to which the new Act is to be applied. It has been published under Section 43 of the Calcutta Improvement Act, and sanctioned by Government. Another scheme which has received the sanction of Government and to which the new Act is to be applied is the widening of a short length of Darmahatta Street and it will be interesting to see how the methods of assessment provided for in the Act will work out in practice.

The Suburban Areas to the south and southeast of Calcutta required greater attention and extensive development schemes were undertaken. Several open spaces and squares have been made in various parts. Insanitary tanks requirilg approximately 2 crores c.ft. of earth have been filled up. Russa Boad which forms the southern approach to the town has been widened to 150 ft. for a length of one mile and 100 ft. for a length of another mile. It now gives a most pleasant drive from Chowringhee to Tollygunge. To improve the dramage of this area a 100 ft. wide East to West road, from Ballygunge Ballway Station to Chetla Bridge, and for regreation an artificial lake of 167 bighas with adequate grounds has been completed.

Another small lake has also been completed and a road is being constructed round it to link up with the road surrounding the main lake The road round the main lake has been surfaced with asphalt and lighted with electricity and is much frequented in the evenings. Sites for club houses adjoining the main lake have been allotted to several clubs. Excavation has been continued in a new section of the lake which is to be attractively laid out with an island to which the public will have access by means of a footbridge. The Calcutta Tramways Co.

Ltd., have now extended tram tracks from Russa Road along New Sewer Road to Ballygunge Station.

The Board of Trustees have framed a scheme for the extension southwards of Lansdowne Road which has received Government sanction, acquisition of land was completed and all the new and widened roads have been completed and opened to trailic; surplus lands are now ready for saic; the Board in pursuance of its policy of carrying out schemes in the centre of the town and in the suburbs simultaneously, so as to have an adequate supply of suburban sites for residential buildings to meet the needs of those displaced from overcrowded areas in the centre of the town has also framed a scheme known as Scheme No. XXXIII for the improvement of another section of the undeveloped area between Russa Road and the Lake District. This too has received sanction of Government and laud acquisition has made good progress and engineering works have been taken in hand.

To the east of the city, several new roads have been constructed in Scheme No. VIIIO (New Ballygunge Road—Park Circus to Old Ballygunge Road). They are now open to traffic, and the majority of them are surfaced with asphalt. Arrangements have been made for lighting the roads with electricity. The development of Calcutta east of Lower Circular Road, between Park Circus and Middle Road, Entaily, as a pressing need, but the work can only proceed slowly in small sections. The Trust in the execution of this scheme cannot ignore the bustee dwellers, who are pushed further east, as the development from bustee conditions to blocks of masonry buildings proceeds. The utilisation of highly-improved lands for bustee purposes is not an economic proposition, but at the same time, it is necessary to provide the essentials of sanitation for the working classes.

The linking up of Amherst Street with London Street by a broad thoroughfare has commenced in two small sections. The Trust has constructed a large park near Park Circus Scheme No. VIII, known as Eastern Park, measuring 65 bighas, with a large playing field for football and tennis. The Goraohand Road Scheme provides for the completion of the northern portion of this park and the commencement of a wide avenue running parallel to Lower Circular Road through the outer fringe of Entally. As the scheme involved the demolition of a large number of ascertain the best means of reducing the displaced bustee population as a result of which a Rehousing Scheme at Ciristopher Road which will cost the Trust Rs. 2,70,000 for land acquisition and Rs. 1,97,000 for engineering works has been framed and has received the sanction of Government. Acquisition of land was completed and the raising of land is in hand.

allotted to several clubs. Excavation has been continued in a new section of the lake which is corporation in 1911 had a total area of about to be attractively laid out with an island to which the public will have access by means of Chairman of the Trust, pointed out that in the a footbridge. The Calcutta Tramways Co.,

spaces which measured about 1,250 acres (in- has proved a striking success. There are 182 cluding the Maidan, the Horticultural and the suites for letting and the rent received from Zoological Gardens) to its total acreage, Calcutta these suites during the year 1938-34, amounted was almost on a par at that time with London to Rs. 32,666. possessing 6,675 acres of public parks or gardens while its percentage exceeded that of New York, Berlin and Birmingham. But about acres of Calcutta's 1,250 was accounted for in

scale the following schemes .-

storied tenement buildings containing 252 lettable rooms were built in Wards Institution Street for persons of the poorer classes It was found, however, that the persons displaced preferred to take their compensation and migrate to some place where they could erect basis of inadequately bridged, by modern and up-to-date their own, the class of structures they were bridged to suit the growing traffic requirements. accustomed to live in. These chawls were the opportunity is being taken of widening the property of th accustomed to live in. These chawls were The opportunity is being taken of widening the then filled with persons of limited means, Maniktala, Narikeldanga and Bellaghata Bridge s.g., school masters, poor students, clerks and approaches on both sides—on the west (in the case persons of the artisan class, As many as 1,200 of Maniktala and Narkeldanga Bridges) ight people are housed in these chawls, these buildings, including land, cost Rs. 2,44,368 and are let at very low rents—ground floor rooms far at Rs. 5 per measem and top floor rooms on Bridges at Maniktala, Bellaghata and at Rs 6 per measem, each room measuring 12'×12' Shambazar have roadways of 37 feet, with two with a 4 ft, versadah in front compling to a footbaths each 10 feet in width.

bustess. Two sites with a lettable and of 16 each, and these are also to be the probable bighas were acquired within the area of Manikola Municipality, but they failed to attract which need re-building. The Chelsea, Hammerbecause they were out of the way and were smith and Waterloo Bridges have all-over widths expensive.

Kerbala Tank Lane Re-housing Scheme -In this scheme 4 detached and 35 semi-detached houses were built. The detached houses were sold as this scheme never became popular with the class of tenants for whom they were originally intended. Owing to this unpopularity the Board further decided to throw open to tenants of all classes 18 out of the remaining 35 semi-detached houses. This change of policy, however, produced no effect on the letting.

Owing to want of suitable tenants the entire dwellings in Kerbala Tank Re-housing scheme had been sold by private sale shortly after the 31st March 1927.

York, Paikpara Re-housing Scheme.—This scheme 1,000 has an area of 36 bighas well laid out in 96 building sites. A new re-housing scheme has been the Maldan and new open spaces in other parts undertaken by the Board, as already stated, at of Calcutta were an urgent need. Up to date Chustopher Road for the bustee population to the Trust had added (including the new lake lo displaced by the execution of scheme No at Dhakuria)—another 250 acres. special feature of the new scheme is that the Lastly for the housing of the displaced land is to be developed as a model bustee for population the Trust has undertaken on a large displaced bustee dwellers. Special facilities are offered to dishoused persons or securing.

In the early stages three blocks of three land in various improved areas for reinstate-252 ment purposes.

with a 4 ft. verandah in front opening on to a footpaths each 10 feet in width. The Chitpore central passage 7 ft. wide. The total collection of rent during the year 1933-31 including pleted has been receigned as a reinforced previous year arrear was Rs. 14,213. as these chaws failed to attract the people. The Alpore Bridge, the reconstruction of which for whom they were meant, the Board next has been completed, has a roadway of 30 feet tried an experiment in providing sites for (3 traffic widths) and 2 footpaths of 6 feet bustees. Two sites with a lettable area of 16 each, and these are also to be the probabilities were accurred within the way of 3 feet also to be the probabilities of the control of the contr of 45, 39 and 42 feet, respectively, the roadways being 29, 27 and 28 feet, that is 3 traffic widths. Even London Bridge with an all-over width of 65 feet has only a 37-foot roadway (4 traffic widths) and Westminster Bridge which is 84 feet in width spares only 54 feet (a.s. 6 traffic widths, like the 60 feet of Kidderpore Bridges for wheeled traffic.

Financial.—Capital charges during the year 1933-34 amounted to Rs. 61.34 lakhs which included Rs. 50 50 lakhs spent on land acquisition and Rs. 3.97 lakhs on engineering works. The gross expenditure of the Trust on Capital Works up to the end of the year 1933-34 was Rs. 14,20,69,000. To meet this large expenditure, the Trust has borrowed Rs. 2,48,50,000; Bow Street Re-housing Scheme.—Seven other Capital receipts (mainly from the sale of blecks of buildings containing one-roomed, two-land and buildings) have yielded Rs. 7,05,20,000 roomed and three-roomed suites have been contained to re-house Anglo-Indians displaced (after providing for the service of loans) has by the operations of the Trust. This scheme contributed Rs. 4 67 crores to Capital Works.

The Indian Ports.

The administration of the affairs of the larger ports (Calcutta, Bombay, Madras, Kanacht, Rangoon and Chittagong) is vested by law in lat all the ports the European members couboiles specially constituted for the purpose. Stuttethe majority and the Board for Madras I have wide powers, but their proceedings consists mainly of European members.

Figures for 1933-34 relating to income expenditure and capital debt of the six principal ports managed by Trusts (Aden is excluded from the tables) as obtainable from the Department of Commercial Intelligence and Statistics (India) are shown in the following table.—

					1			
						Income.	Expenditure.	Capital Debt.
							, I	
						Rs.	Rs.	Rs.
Calcutta						2,88,29,623	2,97,41,777	24,92,39,501
Bombay		••			•••	2,65,61,288	2,66,51,167	20,45,17,753

[•] Includes the first instalment of Rs. 15 lakhs, the second instalment of Rs. 5 lakhs, the third instalment of Rs. 2 lakhs, and the fourth instalment of Rs. 3 lakhs, of a loan of Rs. 50 lakhs from Government.

CALCUTTA.

The Commissioners for the Port of Cakutta are as follows --

Mr. T. H. Elderton, Chairman.

Mr. W. A. Burns, Deputy Chairman and Traffic Manager.

Elected by the Bengal Chamber of Commerce.— Mr. A. O. Brown, Mr. A. L. B. Tucker, Mr. M. A. Hughes, Mr. W. Hunter, Mr. J. Reid Kay.

Elected by the Calcutta Trades' Association .-- Mr. C. H. Pratt.

Elected by the Bengal National Chamber of Commerce,—Mr J C, Banerjee, Mr. Nalmi Ranjan Sarkar.

Elected by the Indian Chamber of Commerce.— Mr. D. P. Khaitan

Elected by the Muslim Chamber of Commerce.— Mr. Kassim A. Mohammad. Elected by the Municipal Corporation at Calcutta.—Mr Rajondra Narayan Banerjee,

Nominated by Government.—Captain L. W. R. T. Turbett, OBE, RIN, Mr. J. A. Bell, Mr. A. E. Harvey; Mi. V. E. D. Jarrad, Mr. W. J. Ward.

The principal officers of the Trust are — Secretary —Mi C W T Hook

Traffic Manager .- Mr. W. A. Burns.

Chief Accountant .- Mr. J. Dand, CA.

Chief Engineer.—Mr. J. R. Rowley, A.K.C M Inst. O E.

Deputy Conservator.—Commander C. V. L. Norcock, O.B.E., R N. (Retd)

Medical Officer — Lt.-Col. F. J. Anderson, M.B., B.S., F.R.C.S., I M.S.

Consulting Engineer and London Agent.— Mr. J. Angus, M. Inst. C.E.

BOMBAY.

BOMI

BOARD OF TRUSTEES OF THE PORT OF BOMBAY --Mr. G. Wiles, CSI, CIE, ICS, Charman) Nomunated by Government —Vice dimiral A. E. F. Bedford, CB, RN, Mi. Syed Minawar, Mr. C. W. E. Arbuthnot, CIE, Major-General S. J. P. Scobell, CB, CMG, DSO, Mr. I. H. Taunton, ICS, Sir Maurice Branshay, Kt, Mr. I. Wilson, Mr. M. Slade, ICS Elected by the Bombay Chamber of Commerce —Mi. G. L. Winterbotham, Mr. G. H. Cooke, Mr. J. Flockhart, Mr. F. H. French, Mr. R. C. Lowndes, Elected by the Indian Mechanity Chamber —Sir Purshotamdas Thakundas, Kt, CT, M. B. E. Mr. Lakhmidas Rowjee Tailsee, Mr. Gordhandas Goculdas Motaty, Mi. A. D. Shoff; Mr. M. C. Mattani, Elected by the Municipal Corporation —Mr. Meyer Nissim, Mr. Hoosenally M. Rahimtoola. Elected by the Malacanal Corporation —Mr. Meyer Nissim, Mr. Hoosenally M. Rahimtoola. Elected by the Mr. Hoosenally M. Rahimtoola. Elected by the Millowners' Association.—Mr A Ceddis

The following are the principal officers of the Trust :-

Secretary, N. M. Morris, Deputy Secretary, A. S. Bakre, M.A., Bar-at-Law.

ACCOUNTS DEPARTMENT.

Chief Actt., J. F. Pereira, B. A., Deputy Acett., C. F. Lynn, M. A., A. S. A.

ENGINEERING DEPARTMENT.

Chief Engineer, G. E. Bonnett, M Sc., M. Inst C E. M.I. Mech E. W. I. P. Deputy Chief Engineer, A Hale-White, M.A., M. Inst C. R. Executive Engineers, G. E. Terrey, AMICE, J A Rolfe; AMICE., AM.IME. Senior Assett. Engineers, P. E. Vazifdar, LCE, F. M. Surveyor, B.Sc. (Glas.), AM.I.C.E., E. L. Everatt, AM.I.C.E., H. N. Baria, L.O.E; Chief Draftsman, L. B. Andrew, M.I. Struto. E.; Personal Asst. to the Chief Engineer, S. D'Mello; Mechanical Superintendent, R. B. Mc Gregor, A.M.I.M.E., Astt. Mechanical Superinlendents, B. C. Sharpe, A.M.I.M.E., S. J. Watt,
M.I.L.E., D. V. Kohil, B. E., and A. C. Strelley,
M.I. Mar. E., A.M. I.M. E., A.M. I.L. E. Chief Foreman, B. Shaw.

Administrative Medical Officer, Dr. F. D.
Bana, M.B., M.E.O.S. Medical Officer, (North
District), Dr. A. D. Karkhanawalla, M.B.B.S.
Superintendent, Antop Village, Dr. M. Vijayakar,
L.M. & S.

DOCKS DEPARTMENT.

Manager, F. A. Borissow; Deputy Managers, W. G. H. Templeton, F. Seymour Williams, D. S. O., P. A. Davies and E. C. Jolley; Asstr Managers, 1st and 2nd Grade, A. Mattos, L. E. Walsh, F. J. Warder, E. J. Kall, D. J. Lynn, Tashier, R. S., Warder, B. S. Asin, D. D. Dynn, C. O. A. Mustensz, P. B. Fenner, Nanabhoy Framil, Ardeshir Maneckli, A. R. Jaywant and G. K. Dukes Cash Supervisor, T. D'Silva; Cashier, Robert Fernandez.

RAILWAY DEPARTMENT.

Raghunathan.

PORT DEPARTMENT.

Deputy Conservator, Capital A. G. Kinch, D.S.O., R.I.N. (Retd.); Dock Masters. Alexandra Dock, J. L. Williams and C. B. M. Thomas; Dock Masters, Prince's & Vectoria Dock. G. England and J. S. Nicholson, Port Department, Inspector and Supdt. of Police, Harbour Patrol, W. F. Bigg; Office Supdt., Moses Samuel.

The trade of the Port of Bombay during the ast official year aggregated Rs. 193 crores in value.

The number of steam and square-rigged vessels which during recent years have entered the docks or been berthed at the harbour Patrol, W. F. Bigg; Office Supdt., Moses Samuel.

PILOT ESTABLISHMENT.

Harbour Master, C. T. Willson, Master Pilots R. C. Vint and A. M. Thomson Pulots, H. W. L. T. Davies, H. H. Church, W. E. Brown, W. L. Friend, R. H. Friedlander, W. Sutherland, H. Lloyd Jones, J. Cook, G. E. Firth, H. T. Elliott, T. B. G. Wardland, J. S. Hawkes, C. J. R. Williams and D. Meikle.

LAND AND BUNDERS DEPARTMENT.

Manager, F. H. Taylor, F.S.I., M.R.S.I., Deputy Manager, B. C. Durant; Personal Asstt., R. G. Deshmukh, B.A., Li.B.; Office Supplt., D. A., Pereira; Asstt. Managers W. H. cummings, C. P. Watson and W. O'Brien; Chief amounting to 489,027 a decrease of 75,441 Inspector, II J Amies

STORES DEPARTMENT.

Controller of Stores, H. E. Lees: 1st Assistant, W. J. Wilson; 2nd Assistant, B. F. Davidson; Statistical Supdt., H L. Barrett.

MEDICAL DEPARTMENT.

L.M. & S.

The revenue of the Trust in 1934-35 amounted to Rs 2,43,87,249 and the expenditure to Rs. 2,46,76,465. The result of the year's working 183. 2, 20, 70, 40.1. The result of the year's working was a defect of Rs. 3,83,062 under General Account which has been met from the Bevenue Reserve Fund, and a surplus of Rs. 9,846 under Pilotage Account, which has been transferred to the Vessels Replacement Fund The balance of the Revenue Reserve Fund at the close of the year amounted to Rs. 50,32,477. The aggregate capita expenditure during the year was Rs. 1,68,545. The total debt of the Trust at the end of the year amounted to Rs. 20,30,34,349, repay-Manager, D. G. M. Mearns M. Inst., T. The total debt of the Trust at the end of Deputy Managers, A. F. Watts and H. A. Gaydon; Assit. Manager, S. G. N. Shaw, P. M. Showe and M. E. A. Kizilbash; Assit Traffic Supali, W. H. Brady; Office Supali, Suprahmanya 1935 was Rs. 500.20 lakhs, in addition to this l part from property appreciation, the Reserve and other funds total Rs. 84'01 lakhs.

KARACHI.

TRUSTEES.

Chairman.—Colonel D. S Johnston, CIE (Vice-Chairman, Elected by the Board)—F Buckney, BA., Collector of Customs, Karachi, appointed by Government.

APPOINTED BY GOVERNMENT

Engr.-Comdr. J. Beggs, R.I.N., (Principal Officer, Mercantile Marine Department, Karachi District); A. K. Homan (Divi-

sional Superintendent, North Western Railway), Major J C Gain, M C (DAA, & QMG, Sind Independent Brigade Area), Khan Saheb Alla Buksh Khudadad Khan Gabol.

ELECTED BY THE KARACHI CHAMBER OF COMMERCE

A, P. Darlow, (Gill & Co.), J. W. Anderson (Grahams Trading Co., (India), Ltd.), G

H Raschen, (Forbes, Forbes Campbell & Co., Ltd.); H S Bigg-Wither, OBE (Burmah-Shell Oll Storage & Distributing, Co. of India, Ltd)

ELECTED BY THE KARACHI INDIAN MERCHANTS, ASSOCIATION.

Isardas Varindmal, (Jeramdas Naumal), Lala Jagannath Balaram Tandon, B Sc, (R B. Brijlal Jagannath & Co.)

ELECTED BY THE BUYERS & SHIPPERS' CHAMBER Haridas Lalji, (Lalji Lakhmidas) Rochiram Thakurdas

ELECTED BY THE KARACHI MUNICIPAL CORPORATION.

Tikamdas Wadhumal, M A. (Oxon), Bar-at-Law. PRINCIPAL OFFICERS OF THE PORT TRUST. Chief Engineer — W. P. Shepherd-Barron, Mc., Inst. McE.

Deputy Chief Engineer .- H. A. L. French, M Inst CE.

Chief Accountant -B. A. Inglet, BA, CA. Traffic Manager -A. A. L. Flynn, CIE, VD, CMIS

Deputy Conservator - Lt - Comdr R R Caws, RIN.

Chief Storekeeper.—R. A. Donde.
Secretry —L. J. Mascarenhas.
Revenue Receipts and Expenditure of the
Port of Karachi for the year 1934-35.
Revenue Receipts Rs. 69,60,000.

Revenue Expenditure Rs. 66,23,000.

Surpius Rs. 3,37,000. Reserve Fund Rs. 52,15,000 (Securities at cost price)

SHIPPING

Number of vessels which entered the Port during the year 1934-35 exclusive of vessels put back and fishing boats was 3,713 with a tonnage of 2,560,715 as against 3,119 with a tonnage of 2,378,403 in 1933-34. 924 steamers of all kinds entered the Port with a tonnage of 2,405,404 against 878 and 2,257,280 respectively in the previous year. Of the 924 steamers 715 were of British Nationality.

The imports during the year totalled 781,000 tons against 724,000 tons in the previous year. The shipments were 1,175,000 tons in 1934-85 against 893,000 in 1933-34

The total volume of imports and exports was 1,956,000 tons against 1,617,000 tons in the previous year.

MADRAS.

The following gentlemen are the Trustees of the Port of Madras :-

Officials.—G. G. Armstrong, O.B.E., M.C., V.D., M. Inst. T., (Chairman and Traffic Managel), Mr G. N. Bower, B.A., (Collector of Customs), Captain B Gordon R.I.N. (Presidency Port Officer).

Non-Officials—(1) Nominated by Government Mr. H. N. Colam; M. Inst. C.E., Mr C. A Munhead.

Representing Chamber of Commerce. Madras—Mr. G. L. Orchard; Mr. H. S Town, Mr. D M. Reid and Mr. R. D. Denniston.

Representing Southern India Chamber of Commerce, Madras.—M. R. Ry. M. Ct. M. Chidambaram Chettiyar Avergal, M. R. Ry G. Janakıram Chetty Garu.

Representing Madras Trades Association.
Mr. S. W. Edwards, Mr. E. A Heath.

Representing Southern India Skin & Hide Merchants' Association.—Mr. B. S. Zackrush

Representing Madras Piece-Goods Merchants. Association .- M. R. Ry, A. Doraisawmy Chetty Garu.

Principal Officers are:-Port Engineer-Mr. G. P. Alexander, A M. I.C.E

Deputy Conservator of the Port of Madras— Lt-Commander A. D Berrington, RNR, (Retd) on leave, Mr.A. Mackensie, (Acting).

Deputy Traffic Manager .- Mr J. G Lord. (On leave.)

E. G. Bowers, M.C., M.I.E.E.

Assistant Mechanical Engineer .- Mr. S. W. White, M.I. Mar. E., A.M.I.N.A.

1st Engineer and Dreadging Master Dreadger "Madax."—Mr. J. E. Burke, (on leave), Mr. F. G. Cooper.

Assistant Engineers.—M. R. Ry. V. Dayananda Kamath Avergal, B.A., B.E., M. R. Ry S. Nagabushanam Alyer Avergal, B.A., M.E.,

Assistant Engineer (Electrical.)-M. R. Ry. K. Subramania Aiyar Avergal, M.E. A.I.E.E.

Harbour Master -Mr A Mackenzie on other duty as Deputy Port Conservator, Mr L T I ewis, (Acting Harbour Master),

ssistant Harbour Masters — Mr 1. J. Whitlock, Mr B Hennin; Lieutenant, CM, Best, RNR, Assistant Traffic Managers

Assistant Traffic Managers.—M. R. Ry. M. S Venkataraman Avergal, B.A., Mr. L. A. Abraham, B.A., F.C.I.

Deputy Chief Accountant.—M. R. Ry. R. Rangaswami Alyar Avergal, B.A.

Deputy Chief Accountant (Engineering).—M. R. Ry. V. Mathuswami Aiyar Avergal, B.A Office Manager.—M. R. Ry. G. M. Ganapathi Aiyar Avergal.

The receipts of the Trust during 1934-35 on Revenue Account from all sources were Rs.33,93,966 as against Rs. 30,65,074 in 1983-34, and the gross expenditure out of revenue was Rs. 30,31,734 as against Rs. 30,00,505 in 1938-24. A contribution of Rs. 3,30,000 was made to Reserve Funds during 1934-35, 784 Chief Accountant.—M. R. Ry. G. Venkataraya
Pal Avergal, M.A.

Mechanical and Electrical Engineer.—Major

Mechanical and Electrical Engineer.—Major

Mechanical and Electrical Engineer.—Major 24,78 301 tons.

RANGOON.

The personnel of the Commissioners for the Port of Rangoon is comprised of seventeen members—

Appointed by Government—A. N. Stiong, M. A. Bai-at-Law (Chairman); T. Cormack, C. A., Captain H. W. B. Livesay, O.B.E., R.I.N., and G. S. Taunton

Ex-Officio.—Mossrs W H Payton, I Cs (Chairman, Rangoon Development Trust), P W. Singleton (Collector of Customs); and J. E. M. Rowland (Agent Burma Railways),

Elected by the Burma Chamber of Commerce — Mossrs M. L. Burnet (Vice-(hairman), C. G. Wodehouse, M.L.C., J. Tait. M.L.C., and Sir Konneth Harpei

Elected by the Rangoon Trades Association - W. C. Penn

Elected by the Chinese Chamber of Commerce -Khoo Ec Khwet

Elected by the Burma Indian Chamber of Commerce —S N. Haji and A W. Adamjee

Elected by the Burmese Chamber of Commerce— U Them Maung, BA, MMF (on leave), U Ale Maung

Elected by the Corporation of Rangoon - U Htoon May.

Principal Officers are - Secretary -C. Witcher.

Chief Accountant —S. A. Wetherfield, B.A.,

Chief Engineer.-W. D. Beatty, B.A., B.A.I. M. Inst. OE.

Deputy Conservator.—Commander C M. L. Scott, RN (Retd)

Traffic Manager .- W. P Bush.

Port Surveyor.—Commander C. Stewart-Lockhart, R N. (Retd.)

The income and expenditure on revenue account for the Port of Rangoon in 1934-35 were — Rs.

Income 75,34,972 Expenditure 67,33,811

The capital debt of the port at the end of the year was Rs. 5,04,28,667. The balance (including investments at cost) at the credit of the different sinking funds on 31st March 1985, was Rs 2,20,93,135-1-6.

The total sea-borne trade of Rangoon during the year 1934-35 was 5,588,139 tons of which 1,267,685 tons were imports, 4,298,672 ton-exports and 21,782 tons transhipment. The total number of vessels (excluding Government vessels) entering the port was 1,609 with a total net registered tonnage of 4,207,929 showing a decrease in the number of vessels and an increase of 82,025 tons in the net tonnage as compared with the previous year.

CHITTAGONG.

Chittagong in Eastern Bengal, lying on the right bank of the river Karnafull at a distance of 12 miles from the sea, was already an important Port in the sixteenth century, when the Portuguese gave it the name of Porto Grande.

The construction of the Assam-Bengal Railway has facilitated the transport of trade with Assam and Eastern Bengal for which the Port of Chittagong is the natural outlet.

Chittagong, Bengal Lat. 22° 21'N; Long 91° 50'E, 1933 Pop 53,156.

TRADE

Imports —Salt, mineral oil, machinery, tea estate stores, rice, coal and railway material.

Exports —Wax, jute, tea, hides, cotton, capas, rice, paddy, eggs, poultry and livestock

Accommodation —Vessels of any size can proceed 9 miles up the Karnafuli to Chittagong at H W.O.S draught of 23 ft to 26 ft.

There are 5 berths for ocean-going vessels at the Assam-Bengal Railway jetties, also two sets of fixed moorings.

Jettles are 2,100 ft. long, provided with hydraulic cranes 17 to lift 35 cwts and 4 to lift 10 tons, ample shed accommodation, and jettles are in direct rail communication with the Assam-Bengal Railway system, cargo in bulk being dealt with direct into wagons. Depth at jettles about 26 feet

Provisions —Fresh provisions, good drinking water and coal obtainable.

There are three river bars affecting navigation controlled by large suction dredger.

Night pilotage is in force except during the S W monsoon

Charges —Port dues 4 annas 6 pies, per reg ton Hospital dues 2 pies per reg ton. Harbour Master's fee Rs 32 Mooring and unmooring in fixed berthis Rs. 32, swinging berthis Rs 16 Berth alongside jetties Rs 40, per day, night work and hollulus extra.

Port Authority: Port Commissioners, Chitta gong.

Officials—Deputy Conservator, Commander, F. W. Angell, RI.N., Port Engineer, F. J Green, BSC, M.ICE, &c., Secretary. A. V Rayawubbi Alyar, B.A., A.S.A.A., Lloyds Agents James Finlay & Co.

VIZAGAPATAM HARBOUR PROJECT.

The question of creating a harbour at Vizaga- to the steamer Berths and an Entrance Chanpatam to supply an outlet for a large area of fertile country adjacent to the east coast of India, hitherto undeveloped, with considerable nuneral resources and without suitable access to the outside world, was first formulated in the days of the East India Company. That the creation of such a port would have beneficial influence on this area was unquestioned Vizagapatam, lies in front of the only practicable gap in the barrier of the Eastern Ghats, is tormed by nature to be the outlet of the Central Provinces, from which a considerable amount of trade has taken this route in the past, even with the imperfect communications, hitherto available. A necessary complement of the scheme was the construction of the proposed railway from Parvatipuram to Raipur now completed which, with the existing coastline of the Bengal-Nagpur Railway would make a large and rich area tributary to the proposed port, and obviate the long and expensive circuit by Calcutta A link has also been supplied in the most direct route to Rangoon from Europe by way of Bombay, while, from an imperial point of view, the provision of a fortified port on the long and almost unprotected stretch of coast between Colombo and Calcutta is held to be a consideration of great importance. lofty projecting headland of the Dolphin's Nose would offer facilities for this purpose.

The Government of India with the approval The Government of India with the approval of the Secretary of State and the Legislative Assembly, sanctioned the construction of the new railway line from Raipur to Parvatipuram. The work is completed and the line opened to traffic. They also decaded to develop the port of Vizagapatam under their direct control and the port has accordingly been declared to be a major Port. been declared to be a major Port.

The work was carried out by a staff of Engineers under the direct charge of an Engiucer-in-Chief who comes under the administrative charge of an Administrative Officer for the development scheme, a post which is held x-officio by the Agent of the B N. Railway. An Advisory Committee consisting of the above mentioned officers and representatives of the Local Government, the Vizagapatam Port Administration and the commercial interests concerned, was constituted to advise on the development of the Harbour.

The scheme for the construction and development of the Harbour will be carried out in stages according to the demand of trade. The first tage is now very nearly complete Ships statted using the Harbour in October 1933 and the official opening by His Excellency the Viceroy took place on 19th December 1933.

The present provision includes a 1,000 it. diameter Turning Basin together with access

nel dredged out to afford a passage 300 ft wide at the bottom Vessels of 27 ft, 6 ms, draft and 530 ft. length are admitted at present and deepening is in progress to allow vessels of 28'-6" maximum draft to enter in the near future.

A quay wall comprising three 500 ft Bertlis has been completed and equipped with 3-ton electric cranes Storage accommodation aggregating 140,000 sq ft. of covered area, in three single storied sheds has been provided in the vieintly of the quay, equipped with full railway and road facilities. One additional Sheds with lighter Berths has been completed and one more shed is nearing completion for export cargo Special facilities have been provided for the storage and shipment of manganese ore In addition to the quays, four Mooring Berths have been installed, around the Basin and additional facilities provided for dealing with lightered cargo.

A large area of land has been reclaimed in the course of the dredging operations and it has been laid out in blocks served by broad roadways. Plots are available for office sites and for industrial concerns. Water supply and electric lighting have been arranged for.

The floating equipment of the Harbour comprises five tugs of 1,500, 600,450 120 and 100 H P respectively and 22 lighters.

A graving dock with an cutrance 60 ft 6 in. broad has been provided; but though adapted for future extension and for use by vessels larger than the dredging eraft which now use it, length of ships is at present restricted to 300 feet

The port is at present capable of dealing with hfts of 50 tons on the quivs but cannot lift more than 3 tons into and out of vessels.

The sea entrance channel is protected on the South side by the provision of a sand trap and protecting Breakwater.

At present ships enter and leave the Harbour during day time only and pilotage is compulsory.

The Port is administered by the Government of India through the Agent of the Bengal-Nagpur Railway who is represented at Vizagapatam by a Deputy Administrative Officer.

The principal officers are :--

Administrative Officer -V. E D Jarrad Calcutta.

Deputy Administrative Officer Traffic Manager. - E. G Lilley Vizagapatam.

of Engineer and Deputy Conservator,— E F Johnson, Vizagapatam.

Education.

Indian education is unintelligible except through its history. Seen thus, it affords the spectacle of a growth which, while to one it will appear as a blunder based on an initial error easily avoided, to another it stands out as a symbol of sincerity and honest endeavour on the part of a far-sighted race of rulers whose aim has been to guide a people alien in senti-ments and prejudices into the channels of thought and attitude best calculated to fit them for the needs of modern life and western ideals. There is to-day no subject in the whole area of administrative activity in India which presents greater complexities and differences of opinion than education. Government, local bodies and private persons of learning have in the past devoted their limited funds to meeting the demands of those who perceived the benefits of education, rather than to cultivating a desire for education where it did not exist. The result is that the structure has become top-heavy. The lower classes are largely illiterate, while the middle classes who constitute the bulk of the intelligence. penters are in point of numbers at least educated to a pitch equal to that of countries whose economic conditions are more highly developed. As might be expected from this abnormal distribution of education, the form which it has aventually assumed contains, corresponding eventually assumed contains corresponding defects. In recent years, however, strenuous efforts have been made to remedy these defects Primary Education Acts have been passed in the several provinces in favour of the expansion of primary education among the masses. On the other hand, the numbers of students in colleges and universities have grown apace; and, espe-cially during the poriod of financial depression, the volume of middle class unemployment has reached alarming proportions. A movement has therefore set in with the object of stemming the drift of unsuitable students to universities by means of a radical reconstruction of the school system of education.

The Introduction of Western Learning

The introduction of Western Learning—In the early days of its dominion in India, the East India Company had little inclination for the doubtful experiment of introducing western learning into India. Warren Hastings, the dominating figure of the time, was a genuine admirer of the laws and literature of the East His policy was to enable the ancient learning to revive and flourish under the protection of a stable government, and to interfer as little as possible with the habits and customs of the people. Even the Act of 1813 which set apart a lake of rupees for the introduction and promotion of a knowledge of the sciences was interpreted as a scheme for the encouragement of Banskrit and Arabic. In the following year the Court of Directors instructed the Governor-General to leave the Hindus "to the practice of usage, long established among them, of giving instruction in their own homes, and to encourage them in the exercise and cultivation of their talents by the atimulus of honorary marks of distinction and in some cases by grants of neutral resistance."

cise and cultivation of their taients by the attmulus of honorary marks of distinction and in
some cases by grants of pecuniary assistance."
It was from sources other than Government
that the desire for western knowledge
arose in India. In 1816, David Hare, an English watchmaker in Calcutts, joined hands with
the enlightened Brahmin, Mohan Roy, to institute the Hindu College for the promotion of
western secular learning. The new institution

was distrusted both by Christian missionaries and by orthodox Hindus, but its influence grow apace. Fifteen years later, the Committee of Public Instruction in Bengal reported that a taste for English had been widely disseminated and that independent schools, conducted by young men reared in the Hindu College, were springing up in every direction. In Bombay, the Elphinstone Institution was founded in memory of the great ruler who left India in 1827. A still more Bombay, remarkable innovation was made in 1835 by the establishment of the Calcutta Medical College, whose object was to teach " the principles and practice of medical science in strict accordance with the mode adopted in Europe." Many pronounced the failure of the undertaking to be inevitable; for, under the Hindu custom the higher castes were forbidden to touch the dead. This obstacle was surmounted by Madusudan Gupta who, with a few courageous pupils, began the dissection of a human body. From that time onward Indians of the highest castes have devoted themselves with enthusiasm and with success to the study of medicine in all its branches.

Another impetus to the introduction of western learning was the devotion of Christian missionaries. The humanitarian spirit, which had been kindled in England by Weeley, Burke and Wilberforce, influenced action also in India. Carcy, Marshman and Ward opened the first missionary College at Scrampore in 1818, and twelve years later, Alexander Duff reversed the whole trend of missionary policy in India by his insistence on teaching rather than on preaching, and by the foundation of his school and College in Calcutta. In Madras, the missionaries had been still group of missionary schools were being directed by Mr. Schwarz. The Madras Christian College was opened in 1837. In Bombay, the Wilson School (afterwards College) was founded in

Lord William Bentinck's minute of 1835 (based upon Macaulay's famous minute) marks of somewhat tardy acceptance by Government of the new policy. Government then determined. while observing a neutrality in religious matters to devote its available funds to the maintenance of secondary schools and colleges of western learning to be taught through the medium of English. But this decision did not entail that English. But this decision and not enter that Oriental learning should be neglected; still less that the development of the vernaculars should be discouraged. Other changes powerfully contributed to the success of the new system. The freedom of the press was established in 1935; English was substituted for Persian as the language of the Courts in 1837, and in 1844 Sir Henry Hardinge ordained that preference in Government appointments should be given to those who had received a western education. In the following decade the new learning took firm root in India: and, though the Muhammadans still held aloof, the demand for English schools outstripped the means of Government for providing them. Fortunately there has been of late a marked appreciation among Muslim leaders of the need of improving the instructional level of their co-religionists; and in many of the provinces of India a great impulse towards educational advance among the Muham. madan community is now noticeable.

GROWTH AND ORGANISATION OF ENGLISH EDUCATION.

An epoch in Indian educational history is marked by Sir Charles Wood's despatch in 1854. Perhaps its most notable feature was the emphasis which it laid on the importance of primary education. The old idea that the education imparted to the higher classes of society would filter down to the lower classes was discarded. The new policy was boldly "to combat the ignorance of the people which may be considered the greatest curse of the country." For this purpose Departments of Public Instructions were created on lines which do not differ very materially from the Departments of the present day. The despatch also broke away from the practice followed since 1835 whereby most of the available public funds had been expended upon a few Government schoole and colleges, and instituted a policy of grants-in-aid to private institutions. Such a system as this, placed in all its degrees under efficient inspection, beginning from the humblest elementary institution and ending with the university test of a liberal education would impart life and energy to education in India, and lead to a gradual but steady extension of its benefits to all classes of people." Another feature of the despatch was an outline of a university system which resulted in the foundation of the Universities of Calcutta, Madras and Bombay three years later. The affiliating type of university then became the pivot of the Indian education system. It has undoubtedly been of value in several ways. It enabled Government to select recruits for its It enabled Government to select recruits for its service on an impartial basis; it did much, through the agency of its Colleges to develop backward places; it accelerated the conversion of Indians to a zeal for western education; and it cost little at a time when money was scarce. On the other hand, the new universities were not corporations of scholars, but corporations of administrators; they did not deal directly with the training of men, but with the examination of candidates; they were not concerned with learning, except in so far as learning can be tested by examination. The colleges were fettered by examination requirements and by uniform courses; their teachers were denied that freedom which teachers should enjoy and their students were encouraged not to value training for its own sake but as a means for obtaining marketable qualifications. In certain important respects the recommendations in the despatch were not followed The Directors did not intend that university tests, as such, should become the sole tests qualifying for public posts; they also recommended the institution of civil service as we missing the such tests and the services are the services as the services are the services as the services are the services as the services are the services as the services are the services as the services are the services as the services are the services as the services are the services as the services are the services as the services are the examinations. They did not desire the universities to be deprived of all teaching functions; they recommended the establishment of university chairs for advanced study. They were ware of the dangers of a too literary course of instruction; they hoped that the system of education would rouse the people of India to develop the vast resources of their country

and gradually, but cortainly, confer upon
them all the advantages which accompany the healthy increase of wealth and commerce. The encouragement of the grant-in-aid system was

advocated to an even greater extent by the Education Commission of 1882, which favoured the policy of withdrawing higher education from the control of Government within certain limits and of stimulating private effort. In theory the decision was correct, but in practice it was irrettievably wrong. In its fatal desire to save money, Government deliberately accepted the mistaken belief that schools and colleges could be maintained on the low fees which the Indian parent could be expected to pay. And, in the course of time, an unworkable system of dual control grew up, whereby the Universities with no funds at their disposal were entrusted with the duty of granting recognition to schools and the Departments of Public Instruction were encouraged to cast a blind eve on the private institutions and to be content with the development of a few favoured Government in titutions. There can be little wonder that, under such a system of neglect and short-sightedness, evils crept in which are now being removed gradually by the establishment of independent Boards of Intermediate and Secondary Education charged with the administration of the high school and intermediate stages of education.

The Reforms of 1902-4.

In 1902, the Universities Commission was appointed by Lord Curzon's Government, and its investigation was followed by the Universities Act of 1904 The main object of the Act was to tighten up control, on the part of Government over the universities, and on the part of the universities over the schools and colleges. The Chancellors of the Universities were empowered to nominate 80 per cent. of the ordinary members of the Senates and to approve the election of the remainder; the Government retained the power of cancelling any appointment, and all university resolutions and proposals for the affiliation or disaffiliation of colleges were to be subject to Government sanction. The universities were given the sanction. The universities were given the responsibility of granting recognition to schools and of inspecting all schools and colleges, the inspection of schools being ordinarily conducted by the officers of the Department of Public Instruction. Permission was also given to the universities to undertake direct teaching funcuniversities to undertaked reter examing func-tions and to make appointments, subject to Government sanction, for these objects but their scope was in practice limited to post-graduate work and research. The territorial limits of each university were defined, so that universities were precluded from any connex-ion with institutions lying outside those boundaries. Neither the Commission nor the Govern-ment discussed the fundamental problems of university organisation, but dealt only with the immediate difficulties of the Indian system. They did not inquire whether the afhliating system could be replaced by any other mode of organisation, nor whether all schools might be placed under some public authority which would be representative of the universities and of the departments. They assumed the permanent validity of the existing system, in its main features, and set themselves only to improve and to strengthen it.

(a) Includes scholars la University Departments and in the Intermediate and Second Grade Colleges (including Intermediate colleges of the new (TPE.). B.—In the educational tables of most provinces the new census figures of 1931 have been used; hence the percentages for 1931 are not strictly comparable with those for 1930.

Recent Developments.

Government of India Resolutions on Indian Educational Policy.—The Indian Educational Policy.—The Indian Universities Act of 1904 was followed by His Majesty's Forces or of other public servants two important resolutions of the Government or of the children of such members or servants. of India on Indian Educational Policy—one in 1904 and the other in 1913. The resolution of 1904 was comprehensive in character and reviewed the state of education in all its departments. The following passage from it summarises the intentions of Government: it summarises the intentions of Government.—
"The progressive devolution of primary, secondary and collegiate education upon private enterprise and the continuous withdrawal of Government from competition there with was recommended by the Educational Commission in 1883 and the advice has generally been acted upon. But while accepting this policy, the Government of India at the same time recognise the extreme importance of the principle that in each branch of education Government should maintain a limited number of institutions, both as models for private enter-prise to follow and in order to uphold a high standard of education. In withdrawing from direct management it is further essential that Government should retain a general control, by means of efficient inspection, over all public educational institutions." The comprehensive instructions contained in this comprehensive instructions contained in this resolution were followed in the next few years by the assignment to the provinces of large imperial grants, mainly for University, technical and elementary education. The resolution of 1913 advocated, inter dua, the establishment of additional but smaller Universities of the teaching type; it reaffirmed the policy of reliance on relyste effort in secondary. policy of reliance on private effort in secondary education; it recommended an increase in the salaries of teachers and an improvement in the amounts of grants-in-ad; and it insisted on proper attention being paid to the formation of character in the education given to scholars of all grades. It further discussed the desirability of imparting manual instructions and instruction in hygiene; the necessity for medical inspection, the provision of facilities for research, the need for the staffing of the girls' schools by women teachers and the expansion of facilities for the training of teachers. The policy outlined in 1913 materially accelerated progress in the provinces, but the educational developments foreshadowed were in many cases delayed owing to the effects of the Great

The Reforms Act.—The Reforms Act of 191 has altered the conditions of educational administration in India Education is now a 'transferred' subject in the Governors' provinces and is, in each such Province, under the charge of a Minister There are, however some exceptions to this new order of things.
The education of Europeans is a 'Provincial reserved' subject, i.e., it is not within the charge of the Minister of Education, and to the Government of India are still reserved matters relating to Universities like Aligarh. Benares and Delhi and all such new universities as may be declared by the Governor-General in Council to be central subjects. The Government of India are also in charge of the Chiefs' Colleges and of

Administration.—The transfer of Indian education to the charge of a Minister responsible to the Provincial Legislative Council, of which he himself is an elected member, has brought the subject directly under popular control in the ten major provinces. Generally speaking, education, excluding European education, is not, however, under the charge of a single Minister in all the provinces of India. Certain forms of education have transferred to the technical departments con-cerned and come within the purview of the Minister in charge of those departments. In each province, the Director of Public Instruction is the administrative head of the Department of Education and acts as adviser to the Education Minister. He controls the inspecting staff and the teaching staff of Government institutions and is generally responsible to the local government for the administration of education. The authority of Government, in controlling the system of public instruction, is in part shared with and in part delegated to Universities as regards higher education and to local bodies as regards elementary and verna-cular education. In some provinces, boards of secondary, or of secondary and intermediate, education have also been set up and have to some extent relieved the Universities in those provinces of their responsibilities in connection with intermediate education and with entrance to a University course of studies. Institutions under private management are controlled by Government and by local bodies by "recognition" and by the payment of grants-in-aid, with by Government and in rarer cases by local bodies

Department of Education, Health and Lands of the Government of India —In 1910 a Department of Education was established in the Government of India with an office of its own and a Member to represent it in the "xecutive Council | the first Member was Sir Harrourt Butler In 1923, the activities of the Department were widened, in the interests of economy, by absorption in it of the Department of Revenue and Agriculture. The enlarged Department has been designated the Department of Education, Health and Lands. The Hon'ble Kunwar Sir Jagdish Prasad and Su Gina Shankar Bajpaj are the present Member and Secretary, respectively. The Department possesses an educational adviser styled Educational Commissioner The Present Educational Commissioner is Sir George Anderson, KT, CSI, CIE, M.A., who is an emment educationist of wide experience and has served on several Commissions and Committees on education in India. It is largely through his efforts that a Central Advisory Board of Education has been established in India. The main functions of the Board are to serve as a clearing house of ideas and a reservoir of information The first meeting of the Board was held in December 1935. The most important question discussed by the Board was that of unemployment and educational reconstruction and a number of important and far-reaching recommendations were made by it in respect to this matter. It is to be hoped that the activities of this Board will prove of great value to the development of education in India on right lines. The constitution of the Board is as follows—

The Hon'ble Member in charge of the Department of Education, Health and Lands (Chairman)

The Educational Commissioner with the Government of India

Ten nominees of the Government of India One member elected by the Council of State Two members elected by the Legislative Assembly

Three members nominated by the Inter-University Board, India

One representative of each local Government (either the Minister for Education or his deputy or the Director of Public Instruction or his deputy)

There is also Secretary to the Board, who is appointed by the Government of India

Educational Services.—Until recently, the educational organisation in India consisted mainly of three services—(i) the Indian Educational Service, (n) the Provincial Educational Service, and (un) the Subordinate Educational Service. The Indian Educational Service are into existence as a result of the recommendations made by the Public Services Commission of 1886, and in 1896 the Superior Educational Service in India was constituted with two divisions—the Indian Educational Service staffed by persons recruited in England and the Provincial Educational Service staffed by persons recruited in England and the Provincial Educational Service staffed by persons recruited in India. These two divisions were originally considered to be collateral and equal in status, though the pay of the European recruit was higher by approximately 50 per cent than the pay of the Indian recruit. Graiunlly, however, status came to be considered identical with pay and the Provincial Educational Service came to be regarded of inferior status to the Indian Educational Service was formed into a superior educational service was formed into a superior educational service and all posts were thrown open to Indian recruitment. The Provincial Educational Service was simultaneously reorganised and a number of posts, generally with their Indian incumbents, were transferred to the superior educational services in India. It was then isid down that the proportion of Indians in this service hould on an average be 50 per cent. of the lotal strength, excluding the posts in Burma

In 1924, all recruitment to the Indian Educational Service was stopped as a result of the recommendations of the Royal Commission on the superior services in India. The Commission recommended that "for the purposes of local Governments no further recruitment should be made to the all-India services which operate

in transferred fields. The personnel required for these branches of administration should in future be recruited by local Governments". The Commission further recommended in regard to the question of the future recruitment of Europeans that "it will rest entirely with the local Governments to determine the number of Europeans who may in future be recruited. In this matter the discretion of local Government must be unfettered but we express the hope that Ministers on the one hand will still seek to obtain the co-operation of Europeans in these technical departments and that qualified Europeans on the other hand may be no less willing to take service under local Governments than they were in the past to take service under the Secretary of State". As a result of the acceptance of these recommendations, the Indian Educational Service is a gying out and with the gradual retirement of its existing members, the history of the service which has had a brief but fine record will be brought to an end. The present organisation of education in the provinces is largely the work of members of this service; while in the sphere of higher education, it has trained many men of more than ordinary attainments.

The new Provincial Educational Services, which function under provincial control as the superior educational services, have been constituted in most provinces. These schemes vary from province to province, but it may be generally remarked that, while the rates of pay are not uniform, they consist of two main classes—class I into which the existing Indian Educational Services have been merged for the time being, and class II which may be said to represent the old Provincial Educational Service.

The existing Provincial and Subordinate Educational Services in the provinces have been affected, more in some provinces that others, by the changes which have taken place since 1919. Communal interests have influenced recruitment, and in some places they have influenced promotions also, in a direction which has not always tended towards service contentment. But these results are the natural consequences of the devolution of control of education and power of recruitment to provincial and local authorities and will for some time continue to affect the efficiency of the Education Departments in the provinces

Hartog Committee on Education.—The most notable event in recent years has been the appointment of the Auxillary Committee of the Indian Statutory Commission, under the Chairmanship of Sir Philip Hartog, to report on the growth of education in India. The report of the Committee, which was published in 1929, constitutes a valuable document on the present state of education in India.

Lindsay Commission —Another Commission, which deserves mention, was appointed in 1929 by the International Missionary Council to investigate the various problems connected with the higher education provided by the various Missionary bodies working in India. It was presided over by 1)r A 1). Lindsay, Master of Balliol College, Oxford. The Commission visited India in 1930-31 and its report was published in 1931.

Statistical Progress.

The two tables given below afford useful comparisons with previous years and serve to illustrate the growth and expansion of education in India.

1933-34								15,66,36,461	26,17,65,186				

In 1933-34 the total expenditure on education in British India amounted to Rs. 26,17,65,186 of which 43 8 per cent. came from Government funds 16.0 per cent. from District Board and Municipal funds 24 8 per cent. from fees and 15.4 per cent from all other

The average annual cost per scholar amounted Rs. 20-15-3 as follows: to Government funds to check this wastage, but the evil cannot be Rs. 9-2-11, to local funds Rs. 3-5-8, to fees Rs 5-3-0 and to other sources Rs 3-3-8.

It may be noted that, out of a total of 9,530,380 pupils in primary and secondary schools for boys, 3,858,177 pupils were enrolled in Class I or the lowest class alone. In the case of primary and secondary schools for girls, the corresponding figures were 2,599,859 and 1,508,266 There is thus much wastage and stagnation in the lowest classes Efforts are being made in all provinces

The different types of institutions with the scholars in attendance at them are shown in the

N.B.—This table does not include areas for which schemes of compulsory primary education are under consideration or have been sanctioned but not yet introduced. It includes, on the other hand, areas in which such schemes have been partially introduced.

The poverty of local bodies is usually the cause assigned to their diffidence to introduce compulsory education to any appreciable extent.

Secondary and High School Education.-Some attempts have been made to give a gleater bias towards a more practical form of instruction in these schools. The Comulssion of 1882 suggested that there should be two sides in secondary schools, "one leading to the entrance examination of the universities, the other of a more practical character, intended to fit youths for commercial and other non-literary pursuits." Some years later, what were called B and C classes were started in some schools in Bengal but, as they did not lead to a university course, they have not been successful. In more recent years the Government of India have advocated the institution of a school final examination in which the more practical subjects may be included. Efforts have also been made to improve the conduct of the matriculation and to emphasise the importance of oral tests and of school records. In Madras, this examination, which was placed under the direction of a Board representative of the University and of Government, proved somewhat cumbrous and certain modifications were made. In the United Provinces and the Central Provinces the control of secondary education has been made over to special Boards created for this purpose. Similarly, the Administration of Delhi has established a Board of Secondary Education for that province and the Government of India have established a Board of Intermediate and High School Education, with headquarters at Ajmer, for Rajputana, Central India and Gwalior. In

the Punjab the school leaving examination is conducted by a Board But the main difficulty has not yet been touched. The University which recognises the schools has no money wherewith to improve them: and the Department of Public Instruction, which allots the Government tion of schools, and no connexion whatever with the private unaided schools. This dual authority and this division of responsibility have had unhappy effects. The standard of the schools also is very low so that the matriculates are often unable to benefit by the college courses. In some provinces an endeavour has been made to raise the standard of the schools by withdrawing from the University the Intermediate classes and by placing them in a number of the better schools in the State.

As has already been stated, there is now a widespread desire to cure these evils by a radical reconstruction of the school system of education. The main defect of the present system is that all pupils, even those in the primary stages, are educated on the assumption that they will ultimately proceed to a university. In consequence, very many pupils drift on to a university and prolong unduly their purely literary studies. In order to counteract this tendency, the school system should be divided into separate stages, each with a clearly defined objective released from the trammels of a university. On the successful completion of each stage, pupils should be encouraged either to join the humbler occupation of life or to proceed to separate vocational institutions, which should be provided in more ample measure than at present.

Reconstruction along these general lines was first proposed by the Punjab University Committee, and was subsequently endorsed by the Universities Conference which met in Delhi in 1934. Its details have been worked out in greater detail in an important Resolution of the Government of the United Provinces later in the same year. The matter was also considered by the Central Advisory Board of Education, which generally endorsed the views expressed by the Universities conference and suggested that expert aid should be obtained to work out the scheme of school reconstruction in the provinces,

Anglo-Indian and European Education.—
There are schools for Europeans and Anglo-Indians which are placed under the control of special inspectors for European Schools The education of the domeiled community has proved to be a perplexing problem, and in 1912 a conference was summoned at Simla to consider the matter. The difficulty is that European Schools are very remote from the general system of education in India. But efforts are being made to bring these schools more into line with the ordinary schools, and Indian Universities generally are affording special facilities for Anglo-Indian boys who may proceed for higher education in Indian colleges.

Recently, as a result of the recommendations made by the Irwin Sub-Committee of the Third Indian Round Table Conference, Provincial Boards for Anglo-Indian and European Education have been constituted in almost all Provinces; and an Inter-Provincial Board has also been constituted, the first meeting of which was held in January 1935 under the auspices of the Government of India.

Medium of instruction in public schools
—The position of English as a foreign lanuage
and as a medium of instruction in public
schools was discussed by a representative conference which met at Simla in 1917 under the
Chairmanship of Sir Sankaran Nair, the then
Education Member. Although it was generally
conceded that the teaching of school subjects
through a medium which was imperfectly understood led to cramming and memorising of
text-books, the use of English medium was
defended by some on the ground that it improved
the knowledge of English. The result of the
conference was therefore inconclusive. Some
local authorities have since then approved
of schemes providing for the recognition of
local vernaculars as media of instruction and
examination in certain subjects. There seems
to be no doubt that the use of the vernacular as
the medium of instruction and examination is
gradually increasing all over India.

The main difficulty, however, is that school classes have often to be split up at considerable expense into a number of language sections. The problem needs further investigation, especially in the direction of evolving a common script for at least a single province, if not for the whole of India. In this connexion, Mr. A. latifi, I o.s., has done good pioneer work in respect to the Romanised Urdu Script.

Boy Scout Movement.—A happy development in recent years has been the spread of the

boy scout movement which has had an excellent effect in all provinces in creating amongst boys an active sense of good discipline.

It is gratifying that intimate contact is being establishment between the Boy Scout Movement and the Junior Red Cross and St. John's Ambulance Associations, as well as with movements for social uplift and improvement of village conditions.

Girl Guide Movement.—This movement is making steady progress. There is, however, a lack of those competent and willing to give instruction.

Medical Inspection.—Arrangements have been made for medical inspection of scholars but progress has been hampered by the shortage of funds and the continued indifference of parents. In the United Provinces, schools are now inspected by officers of the Public Health Department. In Madras, the scheme of medical inspection of schools has been made compulsory in all Government institutions, and it has been made a condition of recognition that all seconmade a condition of recognition that all secondary schools should introduce the schome. In Burma, the grants-in-aid for medical inspection have been temporarily suspended on account of retrentement, but most medical officers have continued the inspection of pupils without remuneration In Bihar & Orissa, certain posts of school medical officers were abolished in 1932, for the same reason, but it has since been found possible to revive them. There is, however, still need for adequate facilities for the treatment of children suffering from diseases. In a few towns in the Punjab, satisfactory arrangement exist not only for medical inspection but also for effective treatment, and an extension of this useful scheme is under contemplation.

The activities of Junior Red Cross and St. John Ambulance Societies have been particularly beneficial in improving the health of school children and in interesting them in the health of others.

Professional and Technical Education.—
A research institute in agriculture was started by Lord Curzon at Pusa in Bihar, which has done valuable work. Its buildings were seriously damaged by the Bihar earthquake in 1934. The Institute has therefore been transferred to New Delhi, where new buildings are being constructed for it. Conferences have been held at Pusa, Simla and Poona, with the object of providing a suitable training in agriculture. A Royal Commission on Agriculture has submitted its report and as a result of its recommendations an Imperial Council of Agricultural Research has been established by the Government of India at their headquarters. Among commercial colleges, the most important is the Sydenham College of Commerce in Bombay. Industrial institutions are dotted about India, some maintained by Government, others by municipalities or local boards, and others by private bodies. The most important are the Victoria Jubilee Technical Institute in Bombay. The Indian Institute of Science at Bangalore, the product of generous donations by the Tata family. The tendency in recent years has been

to place these institutions under the control of and iron work. There are two forest colleges the Departments of Industries. In addition to at Dehra Dun and Colmbatore and a Technical a number of engineering schools, there are Institute is in existence at Cawnpore and Engineering Colleges at Roorkee, Sibpur, Poona, a Mining School at Dhanbad, Mining and Madras, Rangoon, Patna and Benares each of maintain a high standard and great pressure each subject. Provision has been made by the mining and which except that at Roorkee is affliated Metallurgical College at Benares which provides to a university. The engineering colleges a 4-year course leading to a B.Sc. degree in maintain a high standard and great pressure each subject. Provision has been made by the for admission is reported from several provinces. There are schools of art in the larger towns for the Mercantile Marine Service and a ship where not only architecture and the fine arts "I.M M T.S. Dufferin" has been stationed for are studied, but also practical crafts like pottery this purpose in Bombay waters.

metallurgy are also taught by the Mining and a 4-year course leading to a B.Sc. degree in each subject. Provision has been made by the Government of India for the training of cadets

The following table shows in summary form the number of such institutions and of students attending them :-

Universities.

The first University in India, that of Calcutta, was founded in 1857. Between 1857 and 1887 four new Universities, at Bombay, for the reorganisation of the Calcutta University and Allahabad were added. Street with the control of secondary and intermediate education in Bengal and for the establishing type. The Government of India had recognised the control of secondary and intermediate education in Bengal and for the establishing type. nised in their resolution of 1913 the necessity of creating new local teaching and residential universities in addition to the existing affiliating universities. The developme nt of this policy was accelerated by the strength of communal feeling and the growth of local and provincial feeling and the grown of local and provincial mauras, Donney, Laura and the patrictism, leading to the establishment of a consider the findings of the Commission. In the number of teaching universities. The new United Provinces two committees were appoint type of universities has since been strongly ed, one to prepare a scheme for a unitary advocated by the Calcutta University Commissions and Commission of the condition of the sion which has offered constructive proposals as

diate education in Bengal and for the establishment of a unitary teaching University in Dacca. These measures concerned only Bengal but it was generally recognised that some of the criticism made by the Commissioners admit of a wider application. Committees were consequently appointed by the Universities of Madras, Bombay, Patna and the Punjab to consider the findings of the Commission. In the United Provinces the commission. sion which has offered constructive proposals as consider measures for the reorganisation of the to the lines to be followed in university reform. Allahabad University and the creation of a Calcutta University Commission.—The Board to control secondary and intermediate Report of the Calcutta University Commission education.

The Punjab University Enquiry Committee was appointed in 1932 and submitted its report in the following year. The committee reported that "the University is overburdened by the immense area of its jurisdiction and by the ever-increasing number of its students many of whom are ill-fitted for such education." The main recommendation was that the school system should be re-adjusted so that many pupils would be diverted at an earlier age to vocational and other forms of education.

Statistics of Universities-1934.

There are now 18 Universities in India, of which two are situated in Indian States. The following table gives the latest available figures and certain other particulars about these Universities:-

Intermediate Colleges.—One important part of the Calcutta University Commission's recommendations has been accepted by the Government of the United Provinces and the Government of India and incorporated in the Acts establishing the Lucknow and Daccs and reconstituting that of Allahabad, namely, the separation of the intermediate classes from the sphere of university work and of the two top classes of night schools from the rest of the school classes. The separated classes have been combined together and the control over them has been transferred from the University to a Board of Secondary and Intermediate Education. Such a Board was constituted for the Dacca University area by a notification of the Government of Bengal in 1921.

The United Provinces Board was constituted by an Act passed in the same year. The Aligarh Muslim University has, however, reverted to the old system under which the Intermediate classes form part of the University, and the separate Intermediate College has been abolished. In Ajmer-Merwars, the Intermediate classes are under a separate Board which operates in Rajputana, Central India and Gwalior. Intermediate Colleges of the new type have also been established in the Punjab, but they are affiliated to the Punjab University.

Inter-University Board.—The idea put forward by the Indian Universities Conference in May 1924 for the constitution of a central agency in India took practical shape and an Inter-University Board came into being during 1925. Twelve out of fifteen universities joined the Board. Its functions are:—

- (a) to act as an inter-university organisation and a bureau of information;
 - nd a bureau of information;
 (b) to facilitate the exchange of professors;
- (c) to serve as an authorised channel of communication and facilitate the co-ordination of university work;
- (d) to assist Indian universities in obtaining recognition for their degrees, diplomas and examinations in other countries:

- (e) to appoint or recommend, where necessary, a common representative or representatives of India at Imperial or International conferences on higher education;
- (f) to act as an appointments bureau for Indian universities;
- (g) to fulfil such other duties as may be assigned to it from time to time by the Indian Universities.

The Board has not yet had much influence on University policy in India but it has done a considerable amount of useful work in collecting information and in stimulating thought regarding current University problems.

Education of Indian Women and Girls.— There is still a leeway to be made good. All the influences which operate against the spread of education amongst the boys are reinforced in the case of women by the purdah system and the custom of early marriage.

Arts colleges, medical colleges, and the like admit students of both sexes, and a few girls attend them. The Lady Hardinge Medical College for Women at Delhi gives a full medical course for medical students. The Shreemati Nathibal Damodher Thackersey Indian Women's University was started some ten years ago by Professor Karve. It is a private institution and is doing good ploneer work

The All-India Women's Conference on Educational Reform, which holds its meetings annually and has constituent conferences established all over the country, is also doing much useful work. An All-India Women's Education Fund Association has also been established in connection with thus Conference. This association appointed in 1930 a special committee to enquire into the feasibility of establishing a central Teachers' Training College of a specialised Home Science character. This committee recommended the establishment of such a college "on absolutely new lines which would synthesise the work of existing provincial colleges by psychological research". The proposal wis adopted by the A sociation and a college, called the Lady Irwin College, has since been established in New Delhi.

The comparative statement below shows the state of women's education during 1933-34:-

Education in the Army.-The Army in India undertakes the responsibility of the education of certain sections of the community activities are directed into various channels with c rtam definite objects, which may be summaris ed as follows -

- (t) the education of the soldier, British and Indian, in order to :-
 - (a) develop his training faculties;
 - (b) improve him as a subject for military training and as a citizen of the Empire:
 - (c) enhance the prospects of remunerative employment on his return to civil life.

(ti) The fulfilment of the obligations of the State to the children of soldiers, serving and exservice (British and Indian).

- (iii) The provision, as far as possible, of training for the children of soldiers, who have died in the service of their country.
- (iv) The creation of a body of Indian gentlemen educated according to English public school traditions, which should provide suitable candidates for admission to the Royal Military College, Sandhurst.

Doon School -The efforts of the Public Schools Society, which ower its origin to the initiative and enthusiasm of the late Mr S R Das, have culminated in the establishment of a School at Dehra Dun The school will attempt to develop, in an atmosphere of Indian culture and social environment, the best features of English Public Schools It, was opended by His Excellency the Viceroy (Lord Willingdon) in October, 1935 The Society has been fortunate in securing the Chand Bagh Estate at Dehra Dun for the location of the school In February, 1936, there were gives some training in surgery.

188 boys in the school, who were distributed between three houses Mr. A E Foot, who was between three houses Mr. A E Foot, who was formerly a master at Eton, has been appointed as headmaster, he is assisted by fourteen masters, of whom five have been appointed from England The Board of Management of the Society includes the Hon ble Sir Frank Noyce (Chairman), the Hon'ble Sir Jagdish Prasad, the Hon'ble Malik Sir Feroze Khan Noon, Sir Pheroze Sethna, Sir George Anderson and Mr M W. Yeatts, I C S (Honorary Secretary).

Indigenous Education.—Of the 13,172,890 scholars being educated in India 681,094 are classed as attending 'private' or 'unrecog-nised' institutions. Some of these institutions are of importance. The Gurukula near Hardwar and Sir Rabindra Nath Tagore's school at Boipur have attained some fame; and the numerous monastery schools of Burma are wellknown There is also an Indian Women's University at Poona, to which reference has been made under the cilication of Indian women and garls. This University provides instruction through the medium of vernacular, English, being, however, a compulsory subject. Four colleges are affiliated to the University. which are situated at Bombay, Poona, Ahmedabad and Baroda Connected with every big mosque in northern India there is some educational organisation and the schools attached to the Fatchpuri and Golden Mosques at Delhi and the Dar-ul-Ulm, Deoband, are noted. These institutions generally have a religious or national atmosphere.

The Ayurvedic and Unani Tibbia College, Delhi, founded by the late Hakim Ajmal Khan, is an important unrecognised institution. It provides instruction in the indigenous system of medicine up to the highest standard and also

BOY SCOUTS.

The Boy Scouts movement, initiated in England by Lord Baden Powell (the Chief Scout), has spread widely in India, both among Europeans and Indians. The Viceroy 15 Chief Scout of India and the heads of Provinces are Chief Scouts in their own areas. The aim of the Association is to develop good citizenship among boys by forming their character-training them in habits of observation, obedience and self-reliance-inculcating loyalty and thoughtfulness for others-and teaching them services useful to the public and handicrafts useful to themselves.

INDIAN HEADQUARTERS.

Chief Scout for India -His Excellency The hist Honourable the Marquess of Linlithgow, I. f , G.M.S I., G.M.I.E.

Thuf Commissioner.—Captain Nawab Sir Muhammad Ahmad Said Khan, K.C S.I , K C.I.E., WBE, of Chhatari.

Chref Commissioner .- Rai Sahib Denutu G Dutta.

General Secretary for India .- N. N. Bhose Esq., B.A. (Cantab), Bar-at-Law, D 0.0.

Travelling Secretary for India -G. T. J Thaddaeus, Esq., B A., D.C.O. (S. & R.); Ak. L. (for India).

Headquarters Council for India.-

President.—The Chief Scout for India

Chairman-The Chief Commissioner(ex-officio). Members -The Treasurer (ex-officio).

- The Deputy Chief Commissioners (ex-officio)
- Six Members elected by the Provincial Delegates to the Triennial All-India Conference.
- Six members elected by State Delegates to the Triennial All-India Conference.

Secretary -The General Secretary (ex-officio)

The Co-operative Movement.

Rural Poverty.-The outstanding feature of Indian rural economy that is bound to arrest the attention of any observer is the appalling poverty of the rural population. The various estimates, official and non-official, that have been made of the income per head of population in India at various times leave the matter absolutely in no doubt. The Central Banking Enquiry Committee estimates that the average income of an agriculurist in British India does not work out at a higher figure than Rs. 42 a year. The vast magnitude of this evil will be better realised when we take into account the predominance of the agricultural population in India. In 1891 61 per cent. of the total population of the country lived on agriculture, this percentage rose to 66 in 1901 and to 73 per cent. in 1921, in 1931, the percentage has fallen in 1921, in 1931, the percentage has failen a little to 67. The poverty of the agriculturist may be due to a variety of causes, but we cannot ignore the fact that agriculture has in a large measure ceased to be an industry worked for profit, the cultivator labours not for a net return but for subsistence. The extent of an average holding which works out at about 6 acres for an agricultural feature of the state of the description. which works out at about 0 acres for an agricul-tural family of 5 persons is too inadequate to maintain it in ordinary comfort even with the low standard of living which is so characteristic of the rural population of India. Moreover the Indian cultivator is in a jarge measure exposed to the vicisitudes of seasons and the vagaries of the monsoon. In every 5 years there is but one good year, one bad year and three indifferent years. These uniavourable conditions might be mitigated to some extent conditions might be mitigated to some exem-by a well conceived policy of irrigation by the State; but so far, of the total cultivated area in the country about 16 per cent. only has irrigation facilities from rivers, tanks on wells while the remaining 84 per cent. depends merely on rainfall. Thus the trequency of failure of crops, owing to drought and floods and pests, coupled with the low vitality and high mortality ocupied with the low vitality and high mortality of the live stock, render the economic position of the cultivator worse still. The inadequacy of the subsidiary occupations to supplement the slender income from agriculture contributes further to his extreme economic weakness He has sufficient spare time on his hands to devote himself to subsidiary occupations but he has been exposed to the full blast of competition of forces from the rest of the world and many of the industries on which he reised in the past have suffered largely from or been wiped out by the competition of machine-made articles. The recent fall in the world prices of agricultural produce has affected him powerfully for he is now being drawn steadily into the sphere of influence of markets both national and international and he has neither the organisation nor the credit facilities to help him as in countries like the United States of America and Canada and several European countries. In addition to these numerous difficulties, the Indian agriculturist has another serious handicap in this that he is largely illiterate. The percentage of literacy

in India is still very low being only 8 per cent. and any progress in agriculture is well nigh impossible without the background of general education. All these factors lead to the most outstanding feature of Indian rural economythe chronic and almost hopeless indebtedness of the cultivator. The Central Banking Enquiry Committee has estimated that the total rural indebtedness in India is about Rs 900 crores. Though indebtedness of the agricultural population has been there from old times, it is acknowledged that the indebtedness has risen considerably during the last century and more especially during the last 50 years. This colossal burden of debt is the root problem which has got to be faced in any attempt to-wards the economic regeneration of the masses Numerous causes have been advanced to account for rural indebtedness and we aiready have pointed out some of the general causes which give rise to it. A peculiarity, however, that we notice is that the debt which remains unpaid during the lifetime of the cultivator who contracted it passes on as a burden to his heirs so that many agriculturists start their career with a heavy burden of ancestral debt which they in their turn pass on with some further increase to their successors. Ignorance and improvidence, extravagance and conservatism have further been held forth as the reasons for the continued growth of this heavy load. A marriage festival in the family tempts him to launch out into extravagance while funeral feasts prove no less costly All these factors— the uneconomic nature of the agricultural industry, chronic and heavy indebtedness and liliteracy form a thoroughly depressive background of Indian rural economy.

Genesis of the Movement.—It is no wonder under the circumstances detailed above to find that the Indian agriculturist has constant recourse to borrowing and that too not only for any land improvement that he may contemplate but for his current agricultural needs as also for periodical unproductive purposes such as weddings and funeral feasts. The absence of any banking organisation in the country-side has driven him into the arms of the sowear or the mahajan who, while proving a very accommodating person, has exercised a grip on him from which it has been found aimost impossible to extricate him. The usurious rates of interest charged, coupled with various devices which increase still further the actual rate of interest, and the numerous services which the sowear performs as a retail radesman and the buyer of his produce, make him the dominant force in the village, reducing the agriculturist to the position of a serf, toiling for generation after generation, without ever hoping for a release from his ciutches, getting bare subsistence as a reward for all the trouble that he might take and therefore becoming listless, fatalistic and absolutely unprogressive. In 1883 the Land Improvements Loans Act was passed and this was followed in the next year

submitted a report to the Madras Government on the possibility of introducing land and agri-cultural banks and the discussion thus initiated by him was continued by Mr. Dupernex of the U P., in his "Peoples" Banks for Northern India". The caste system of the Hindus had the ideas of common brotherhood among the the ideas of common brotherhood among the Moslems were evidences of the peoples' natural aptitude for co-operation and the nudhus of Southern India furnished a practical proof of this aptitude. The Government of India in 1901 appointed a committee to consider the question of the establishment of agricultural banks in India and the report of this committee resulted in the passing of the Co-operative Credit Societies' act of 1004. The convertion review Societies' Act of 1904 The co-operative movement was thus launched in India on the 25th March, 1904. The Act aimed at encouraging thrift, self-help and co-operation amongst agriculturists, artisans and persons of limited means and the societies that were to be started were intended to be small simple credit societies for small and simple folks with simple needs and requiring small sums only. Knowledge of and confidence in their fellow members which are the keynote of success were ensured by providing that a society should consist of persons residing in the same town or village or group of villages and should be members of the same tribe, class or caste. In order to provide facili-ties in urban areas for the small man, urban societies were also permitted. The Act intro-duced the principle of unlimited liability for rural societies following the Raiffelsen system rural societies following the Rainelsen system in Germany, though it permitted urban societies to choose the Schulze-Delitzch model. The local Governments were empowered to appoint special officers called Registrars of Co-operative Societies, whose duty it would be to register societies formed under the Act, to get the accounts of such societies audited by a nember of their set and in general to see the member of their staff and in general to see that the societies worked well. The seed thus sown has grown to-day in the course of 36 years into a fine tree with twigs and branches, spread out in many directions. In spite of several weak nesses in the co-operative movement in India to-day, it is beyond dispute that the movement has been a powerful instrument towards the awakening of the country-side and has ied to a steady improvement in various directions of the life of the Indian cultivator. Moreover, the use of the vote, the elective system, self-help, selfreliance, compromises, gives and takes, work on an organized plan, rounding of angularities are great items in the training up of a citizen and the co-operative societies have been great chools for political and civic education. Since the launching of the movement in 1904, there have been amendments of the cooperative law and committees and commissions. of enquiry to remedy defects and to suggest further lines of action. These we shall note later on.

Growth of Co-operation.—In the first few cars of the movement the number of societies grew up very slowly but the growth was consi-lerably accelerated from 1910 and the average very rapidly and stands to-day at about Rs. 96

by the Agriculturists Loan Act enabling number of societies from 1910 to 1915 was about Government to advance loans repayable by 1,100. The pace of growth still further quickened easy instalments and at low rates of interest and now there are 9,467 agricultural for improvements and also for current agricul- societies and about 11,124 non-agricultural ones. tural needs. In 1892 Sir Frederick Nicholson Table 1 shows the distribution of these societies societies and about 11,124 non-agricultural ones.

Table 1 shows the distribution of these societies by provinces. It will appear from the table that progress in different parts of India has not been uniform. Bengal, the Punjab and Madras have the largest number of Societies—while the other major provinces like Bombay, Bihar and Orissa, the United Provinces and the Central Provinces, Burma and Assam show distinctly smaller figures. The Punjab with over 21,000 societies stands first in the number of societies (91) per one lakh inhabitants, while Bengal which has a larger number of societies than the Punjab stands second in that respect with 47. The progress in smaller areas, like Coorg and Ajmer-Merwara, must be regarded as very satisfactory in view of their small population, since the number of societies per one lakh inhabitants works out in their case at 125 and 118 respectively. It is satisfactory to note that the co-operative movement has spread not only among the British Indian Provinces but also in Indian States and compared to the total population, Bhopal and Gwalior lead in this matter though the premier States of Kashmir, Mysore, Baroda and Hyderabad have also made considetable progress. Even more instructive are the figures in Table 2 The total number of members of primary societies stands on the 30th of June 1934 at 43 lakhs. Taking the normal family at a little under 5, it is clear, therefore, that more than two crores of the people of India are peing served by this movement. There is no single movement in the country fraught with such tremendous possibilities for the uplift of masses as the co-operative movement and there is no single movement with such a large percentage of the population affected by it. Though the Punjab leads in the number of members of societies (30) per one thousand inhabitants, Bombay comes next with 26 8, while Madras and Bengal rank thereafter. This shows that the size of societies thereafter. varies in different provinces and that Bombay, while having a smaller number of societies, has a larger average of membership per society as compared with the other provinces of British India. Of the smaller areas, Coorg takes a leading place with 76 members per one thousand inhabitants, while Travancore has an average of 44 5. Membership is a much better test in many respects of progress than the number of societies and from this point of view, the progress in Bombay, the Punjab, Coorg, Travaucore and Bhopal must be regarded as distinctly satisfactory. There is, however, a third aspect also of the growth of the movement. Merely the number of societies, or the member-ship in the societies is not an index of the work that is being done and of the benefits which are being conferred by the movement on the population affected. The societies are predominantly credit organisations or rather small banking institutions and the part that they play can be better appreciated from their working capital than from merely the number of members. In this direction also we must note the marvellous progress so far achieved by the movement. From about Rs. 68 lakhs, which was the average

members together contribute about Rs. 35 crores and this is really owned capital or the members' own money. The provincial or central banks and other societies contribute a little less-30 crores while the non-members or the outside public contribute about 30 crores. This latter item shows to a remarkable extent the growth of public confidence in co-operative institutions and speaks well in general of the management of the societies and the very useful purpose they serve in the banking organisation of the country. The distribution of the working capital by provinces and States gives us a further insight into the progress made in this direction by the co-operative movement in different parts of India. The Punjab leads in this respect also with 125 annas per head of population while Bombay comes next with 118, Madras and Bengal fall behind with 55 and 56 respectively. Among the smaller areas, Ajmer-Merwara comes out first with 144 annas per head of population while Coorg follows with 107. Of the Indian States, Indore takes the first place with 88, while Mysore, Baroda the first place with 88, while Mysore, Baroda and Bhopal follow with 53, 51, 48 respectively Bombay stands an easy first in the matter of deposits from members which amount to over three crores out of a total working capital of about 16 crores and this is one of the best tests of the success of a co-operative society. It is obvious from a glance at the figures in the tables that there has been very rapid progress in the number of societies, in their membership and in the working capital of these societies. The Punjah, generally speaking, leads in many respects with Bombay coming close behind. The with Bombay coming close behind. The smaller areas and the Indian States have also achieved considerable progress though the movement there started comparatively later. The agricultural societies predominate in all the provinces and States while non-agricultural, that is, urban societies show a much slower development. While there is much room for satisfaction at the phenomenal growth of the movement in rural and urban areas, it must be admitted, however, that merely the figures of the number, membership and working capital are not enough to base conclusions upon. But before we proceed further, we must now explain the chief component parts of the structure, as it has now been built up, of the co-operative movement in the country.

Financial Structure of the Movement. Apart from the comparatively few co-operative societies at present working in India for noncredit purposes, it must be recognised that whether in urban or rural areas, a co-operative society largely means a small bank or a credit institution for providing financial accommodation to its members on a co-operative basis. brotherhood which imposes such an obligation of these credit institutions, by far the greater as unlimited liability on all, so that they either proportion is rural. The rural credit society swim or sink together. To secure success, has, for its main purpose, the financing of the therefore, the proper selection of members is agriculturist and as such it needs funds. The original idea of co-operative credit lies in making day and the to the needy the surplus of the well-to-do brethren through the medium of the society-been, in the eager desire to promot but in Indian villages, the well-to-do and the tion of more and yet more societies.

crores. It is pleasing to note from Table 3 needy rather form distinct groups, the former that this large sum has been derived mostly playing or trying to play the sowcar. Thus from non-Government sources. The share instead of comprising more or less all sections capital, the reserve fund and the deposits from of the population of the village, the society is rather made up of the needy section only, at any rate, very largely. Even otherwise, the slender savings of the well-to-do would not be enough to meet the wants of the needy and each village society is not, therefore, able to be selfsufficient, making available the deposits of its well-to-do members as loans for the needy ones. The heavy load of unproductive debt of the average Indian farmer, his habit of investing his savings, if any, in lands and ornaments, and his illiteracy and consequent lack of the banking habit, soon made it apparent that the rural credit societies could not be expected to raise the required funds in deposits either from members or locally. The question of funds for the working of a rural co-operative Society thus becomes a vital question indeed Central banks have therefore been brought into existence at the district head-quarters in order to raise money from towns and make them available to the primary rural societies. Following up the idea further, it has been found necessary to have a provincial bank at the provincial head-quarters to serve as a balancing centre for the central banks and to make available larger funds for the primary societies through the central banking institutions. The financial structure of the co-operative movement is thus largely composed of three parts—(i) the Agricultural Credit Society, (ii) the central financing agencies, and (ivi) the provincial banks. Obviously one more part in the structure seems possible and desirable, namely, an Apex Allindia Co-operative Bank. So far, however, such an All-India Bank has not been started and the provincial banks have been content with an All-India Provincial Co-operative Banks' Association.

> Agricultural Credit Societies —The success of these societies is closely related to their very peculiar constitution. In an ordinary joint stock company, a member is liable only to the extent of the value of his share holding and his liability is therefore hmited; but in the case of agricultural credit societies, the liability is unlimited, that is to say, members are jointly and severally liable to the creditors of the society for the full amount of the debts incurred by it Such a liability would never be acceptable to any person, unless he was imbued with the broader vision of brotherhood between members and unless he himself had an active voice in the management of the society and had a more or less full knowledge of the character and antecedents of his tellow members. Co-operative credit is the capitalisation of character and unlimited liability is the great instrument to secure the admission into a society as members of these persons only, who by their character and antecedents deserve to be taken into that of the utmost importance; and it has been unfortunate that in India this has not been in practice as well kept in view as it should have been, in the eager desire to promote the forma

turist needs money for productive purposes, such as his current agricultural needs, land improvement, purchase of stock and implements, manures and seeds as also for unproductive purposes, such as repayment of old debts, weddings and funerals. He thus requires credit not only as a producer but also as a consumer—a producer who hardly makes profits from his industry and a consumer who has no past savings to enable him to tide over a bad pasts savings to change film to the over a bad period, but who is a perpetual borrower ready to live for to-day and letting the to-morrow take care of itself. He is besides ignorant and take care of insert. He is besites ignorant and illuterate and though sufficiently conversant with the routine of his industry, hardly awake to the need or scope for improvements in has methods Under such circumstances, it is imperative for the management of the rural co-operative society very carefully to scrutinise the loan applications and examine the purpose for which loans have been asked and to see arcfully that the loan when sanctioned is used for the specific purpose. And yet, it is in this respect that there is considerable scope for improvement.

The funds of an agricultural credit society are raised from entrance fees, share capital deposits or loans from non-members, loans from the central or provincial banks, loans from Government and the reserve fund. The income from entrance fees and share capital is small compared with the financial requirements of the members. The large sources from which funds are derived are deposits and loans. The volume of deposits which a society is able to secure on terms offered by it is an index of the measure of the public confidence it has inspired and the soundness and the stability of its financial position. The ideal placed before these societies is the development of members' deposits to the extent of making the society financially self-sufficient. These deposits by members turther serve the purpose of stimulating thrift and saving habit among them, and are, therefore, eminently desirable. Attempts are everywhere made to encourage them, but the response has been small, except in the province of Bombay, where it forms about 1 of the total working capital. Loans from central banks therefore turnish the bulk of the working capital of these agricultural credit societies at present.

Low dividends and voluntary services resulting in low cost of management have made it possible to divert a substantial proportion of the profits of these societies to reserve funds, and thereby provide against unforeseen losses, had debts and losses on the realisation of certain 199cts such as by investment depreciation. he general practice in regard to the use of the reserve fund in the business of the

The figures show that these tiny agricultural societies in India work with over Rs. 16 crores of their own capital (including members' deposits in this head) as against their outside borrowed capital of about Rs. 18 crores. The owned capital was thus about 47 per cent. of their total working capital, and this proportion is rising steadily as years pass by.

Central Financing Agencies.—The formation of banks in urban areas on co-operative principles, with the sole object of raising funds for advances to societies having been found necessary to place the financial structure of the movement on a sound basis, the Co-operative Act of 1904 was amended in 1912 and the Co-operative Societies Act II of that year provided for the registration of central banks with the sole object of financing societies Soon thereafter the number of central financing agencies grew rapidly all over the country, especially in the United Provinces. The function of these central societies was not only to supply the required capital to the primary societies but also to make the surplus resources of some societies available for other societies suffering from a deficiency of funds and to provide proper guidance and inspection over them On the 30th June 1934 the number of central banks was 603.

There are four main sources from which a central bank derives its working capital which stood in 1933-34 at 30.9 crores: (a) Share capital, (b) Reserve, (c) Deposits, (d) Loans.

The paid up share capital and reserves of central banks constitute the owned resources of these banks as distinguished from borrowed resources and provide the guarantee fund against which additional funds are raised by them in the shape of deposits or loans. It is usual to prescribe a suitable proportion between the owned and borrowed resources of central banks in each province. The most usual proportion observed in practice between the borrowed and owned resources in all parts of the country is 1 to 8. Deposits from members and nonmembers constitute the bulk of the borrowed capital of central banks. The total amount capital or central banks. The total amount of deposits held by central banks in the year 1933-34 from individuals and other sources amounted to Rs. 18'4 crores, and from primary societies to Rs. 3'1 crores. Deposits in central banks are mainly of two kinds, viz., savings and dred Current deposits are set. fixed. Current deposits are not universal but confined only to selected central banks in selected areas. The principle usually observed by these banks is not to grant loans to societies for periods longer than those for which deposits are available negligible. They aggregate to about 34 crores the periods of deposits are also comparatively

long. In addition to funds obtained by deposits, central banks raise loans either from outside banks from other central banks, from the local provincial bank or from Government. The total amount of loans held by the central banks in amount of loans neid by the central banks in 1933-14 from outside banks, from other cooperative banks and from the provincial banks was Rs. 3 of corres and from Government Rs. 49 lakhs. Excepting in Burma and recently in Bomb y in connection with land mortgage banking operations central banks in banking operations central banks in other provinces of British India do not directly borrow loans from Government; the central banks of Indian States, excepting Mysore, do to a greater or less extent hold loans from Government, while in Gwalior, loans from Government constitute the most important item of the total working capital. Borrowings from outside banks are generally confined to accommodation obtained from the Imperial Bank of India against Government Securities or Promissory Notes executed by societies in favour of the central bank and endorsed by the latter in favour of the Imperial Bank accommodation is, however, limited and advances from other joint stock banks are also now The main source of loans is, therefore, the provincial bank, and where a provincial bank exists, the central banks are generally prohibited from having any direct dealings with either the Imperial Bank or any other joint stock bank or with one another. This rule is however not or with one another. This rule is however not rigidly observed in the Punjab and Madras. Several central banks in the country, due to their long standing, now possess sufficient resources to be independent of any outside financial assistance but they all continue credit arrangements mainly with the provincial bank on which they rely for emergencies.

In the initial stages, several central banks developed from ordinary urban societies which granted advances to individual shareholders. A few of such central banks have continued the practice and the amount advanced by central banks to individual members during the year 1933-34 was Rs. 99 lakhs chiefly in the Punjab. Bombay and Madras This practice, however, is gradually being abandoned as the chief function of a central bank is to finance societies and to serve as their balancing centre. The total advances made by central banks to societies at the end of the year 1933-34 amounted to over Rs. 8.4 crores.

After meeting management expenses the profits of central banks are distributed as allocations to reserves and dividends to shareholders. The combined net profits of the 603 central banks of the country during the year 1933-34 amounted to Rs. 40 lakhs on the total working capital of Rs. 31 crores; the rate of dividend paid varied from 3 to 10 per cent. in different parts of the country but the most usual rate paid was 6 per cent. per annum.

Provincial Co-operative Banks.—In India, at present, all the major provinces except the United Provinces have apex banks functioning in them. There are apex institutions in two of the Indian States, Mysore and Hyderabad, though in the others also there are institutions which, seven are in British India and two in the Indian States. The constitutions of these institutions vary considerably; but the functions of all these institutions are more or less the same, namely, the co-ordination of the work of the central banks and provincialization of finance in them. It is found that in a large majority of the apex banks, the constitution is a mixed one, that is, both in the general body of the banks as well as in the directorate, there are individual shareholders as well as representatives of co-operative societies and central banks.

All apex banks both in British India and in the Indian States depend for their working capital largely on deposits from the affiliated co-operative societies as also from the public It is, therefore, thought necessary to insist upon the maintenance of fluid resources on a certain scale and in some provinces the Government of the province has prescribed definite rules with regard to the maintenance of fluid resources. The period for which deposits are accepted determine the maximum period for which they can lend out these borrowed funds to their clients, and in every province the apex bank has fixed for itself a maximum term, beyond which no loans are, in general sanctioned to the borrowing client. The following figures will clearly show the position and transactions of the apex banks in 1933-34.—

Provincial Banks, 1933-34.

While accepting deposits from co-operative banks and the general public, most of the apex banks have also dealings in current account with the latter. The Punjab bank does not encourage such accounts with individual nonmembers, as it does not wish to enter into members, as it does not wish to enter into competition with central banks. Apex banks also generally carry on ordinary banking business, such as collecting hundis and dividends from companies and collecting the pay and pensions of public servants. The provincial banks of Bombay, Madras and the Punjab have floated learn term debentures. corresponding to the apex bank or functioning banks of Bombay, Madras and the Punjab have as such. The Bank in Burma being in liquida-floated long-term debentures. The Bombay tion, there are nine such institutions in all out of bank has so far issued debentures of the value

of Rs. 9 8 lakhs and these debentures are recognised as a trustee security. The bank at Madras has floated debentures of the value of 2.18 lakhs on the security of a floating charge of the general assets of the bank, while the Punjab bank has assued debentures of the value of 5 lakhs. As in every banking institution, these banks also are frequently troubled with surpluses and deficits, though at different times in the different institutions. There is therefore interlending of surplus funds between these apex banks, and during the period of shortage of funds, deposits are accepted from surplusing banks, and some of them call for special season deposits allowing favourable rates of interest to tide over the period of shortage. The All-India Provincial Co-operative Banks' Association enables the member banks to ascertain which of them are surplusing in the period and by correspondence to arrange for inter-provincial borrowings.

Overdues.—Among the most important tests of the success or otherwise of a co-operative 30th June 1934.

credit society is undoubtedly the promptness in repayment of loans by members and it is in this respect that one has to recognise that in India, the societies have not attained any very great measure of success. On the 30th June 1931, the overdue loans in agricultural societies amounted to Rs. 13,01,26,983 as compared with Rs. 13,00,76,376 the year before; the working capital of the agricultural societies was Rs. 33,98,77,947; the loans due by individuals were Rs. 27,03, 7,921. The individuals were Rs. 27,03, 7,921. The overdue loans were therefore 38 per cent. of the working capital and 48 per cent. of the total loans due by individuals. The position is however rendered more serious when one realises that the figures are considerably obscured by book entries and extensions of the date of repayment and in some cases, by the farmers' borrowing from the sowcar to pay the society's dues and that the percentages represent merely an average for all-India. The following table shows the position by different provinces on the

Overdue Loans in Agricultural Societies, 1933-34.

(in lakhs of rupees.)

on have reduced the repaying capacity of the agricultural borrower considerably and increased the terrible load of overdue loans in lutal credit societies. This continued growth of overdue loans is an ominous portent and dects very badly on the soundness of the co-oberative structure. The loans having been based on the basis of the assets of members, the timate solvency of the societies is beyond d pute, but severe pressure on members and the unsequent wholesale liquidation of societies

The position has since June 1933 grown more phenomenon, which menaces the entire existence serious, since the fall of prices of agricultural of the co-operative movement are chicfly to be produce and the world crisis and trade depres-found in not basing the loans sanctioned on the repaying capacity of the borrowing member, in sanctioning loans for unproductive though perhaps necessary social or domestic purposes or for the redemption of old debts and generally in the uneconomic nature of the agricultural industry. The loose scrutiny of the purposes stated in the loan applications and the absence of a careful watch on the way the loan is spent by the members, which must be the case, where almost every member is a borrower or a surety to other borrowers and where the societies are would react very seriously both politically and composed almost wholly of the needy section e onomically. The causes that have led to this of the village, the well-to-do standing aloof, the remissness in exerting pressure and in taking settlement of debts on a compulsory basis. more funds than they could use, are more eager even than the Registrar himself for organising new credit societies.

Land Mortgage Banks.—The loans advanced by co-operative societies to their members and by the central financing agencies to their constituent societies are, from the very nature of the source from which they derive the bulk of their finance, for short or intermediate terms only. By concentrating upon the growth and multi-plication of rural credit societies and thus upon facilities for short and intermediate term loans, the co-operative movement did not provide for the redemption of old debts or for increasing the earnings of agriculturists which alone would prevent any further increase in their debts and pave the way for the paying off of the old ones It does not seem to have been adequately realised that the removal or the lightening of the heavy load of indebtedness does not depend so much upon the easy terms on which co-operative finance can be made available, as upon the ascertainment of the amount of individual indebtedness to the sowcar, upon so fully financing the agriculturists that they could be prevented from resorting to the sowcar any more, and above all on making agriculture an industry sufficiently paying to leave a little saving after all legitimate current expenditure on agriculture and the household has been met, so that this saving could be applied to the liquidation of old debts The mistaken notion associated with the start of the movement that co-operative credit could serve this purpose and which has clung more or less till now as evidenced by permitting this purpose to be regarded as a legitimate purpose for loans is largely responsible for increasing the load yet further. Short or increasing the load yet further short or wild and the state of the state intermediate term loans can, if judiciously employed, prevent any further increase in the burden, though even that in the present state of uneconomic agriculture seems scarcely possible; but it cannot leave any adequate margin of saving which could be employed to redeem past follies or misfortune. The sowcar, it is often forgotten, is the village retailer as also the purchaser of the villagers' produce and what he cannot recover from the borrower by way of merest or the part payment of the principal of the loans, he can more than make good on the threshing floor or in his shop. The co-operative movement by concentration on the credit side has attacked him on one front only, so that the risks of non-payment are saddled on the society while the profits of the merchant and the retail shop-keeper are till enjoyed by the sowcar, the attack ought to have been on all fronts. However, under the circumstances, the claiffica-tion of the situation of indebtedness is most desirable as a preliminary towards tackling the important questions of the redemption of old debts. The Indian Central Banking Enquiry Committee has wisely emphasised the need for a vigorous policy of debt conciliation on a volun-tary basis and for exploring the possibility of value. While mutual knowledge of and undertaking legislation to secure, if need be, the control over one another among members is the

remissiones in exerting pressure and in taking settlement of debts on a compulsory bass. A action against the defaulter, even when he is simple Rural Insolvency Act as recommended wilfully defaulting, add considerably to the by the Royal Commission on Agriculture and growth of this menace of excessive overdues. endorsed by the Central Banking Committee The central financing agencies are more con-would also be an important step towards liberacerned with the assets that in the last resort ting those, who have already given up all their are the security for their lendings and, with assets, from the incubus of ancestral and old the security that they are the security for their lendings and with assets. by the Royal Commission on Agriculture and endorsed by the Central Banking Committee debts, so that at least they and their heirs could start with a clean slate. In any case, the need for long term loans to the agriculturists for land improvement and for the redemption of old debts seems obvious, and it has now been recognised that the time has come for the provision of this facility by the starting of land mortgage banks.

> There are three main types of such banks. The strictly co-operative type is an association of borrowers who raise credit by the issue of mortgage bonds bearing interest and made payable to bearer and is well illustrated in the German Landschaften The commercial type is represented by the Credit Foncier of France, which works for profit and declares dividends. The third type—the quasi co-operative has a mixed membership of borrowers and non-borrowers, operating over fairly large areas and formed with share capital and on a limited liability basis. The banks organised so far in India are in a sense of the co-operative type, though strictly speaking they belong to the quasi co-operative variety, admitting as they do to the membership a few non-borrowing individuals for attractive initial capital as well as business talent, organising capacity and efficient management.

> At present there are 12 co-operative land at present there are 12 co-operative and mortgage banks in the Punjab. Two of these operate over whole districts, the rest confine their operations to a single tehsil. Bombay has 15 land mortgage societies, which have only recently started their operations. Bengal has two, Assum has five, while Madras has 38 primary land mortgage banks and a cential land mortgage bank has been started recently It is too early to pronounce on the success or otherwise of these few banks. Among the objects for which these banks advance loans are the redemption of old debts, improvement of land and method of cultivation and the purchase of land in special cases. The Central Banking Committee think however that for a long time to come the resources of these institutions will be mainly required for enabling the cultivator to redeem his land and his house from mortgage and to pay off his old debts. One feels, however, extremely doubtful whether the emphasis should not be laid on the intensive and extensive develop ment of agriculture, since as pointed out above. ment of agriculture, since as pointed out unless agriculture becomes a paying industry, the redemption is impracticable and illusory. bulk of the funds of these banks will have to be raised by debentures and for these purposes, there will have to be in the provinces central land mortgage banks as in Madras and in Bombay Government will have also to render assistance to these institutions for the success of the to these institutions for the success of the debenture issue, and its guaranteeing the interest as in the Punjab ought to meet all reasonable needs, though in special case. there would not be much harm in the Government purchasing debentures of a certain value. While mutual knowledge of and

insistent feature in the case of the unlimited tempted only to spread knowledge of co-operation insistent reature in the case of the diministration of the library configuration of the members of case of a land mortgage bank with limited societies and to train up the office-bearers in the library and business habits various ways. Education has thus developed of the directorate, in order to ensure sound into an important function of these institutes of the directorate, in order to ensure sound valuation of security, careful investigation of titles, correct assessment of borrower's credit and repaying capacity and on the efficient management of affairs.

Propaganda, Education and Training.— In the initial stages of the movement, it fell on the Registrar to carry on propaganda and organize co-operative societies For this purpose the assistance of non-official honorary workers was imperative and in the various provinces a band of such workers was brought into existence, who as honorary organisers of the district or talukas actively co-operated with the officials in carrying on propaganda, organising new societies as a result thereof and looking after the societies so started in some measure With the rapid growth of co-operative societies, however, it was felt that for the further propagation of the movement it was desirable to carry on work by the non-officials in a more organised manner and for that purpose co-sperative institutes were started in the various provinces. In some provinces, like Bombay, these institutions are mixed institutions with a membership of individual sympathisers and workers and of co-operative societies. In others, like Madras and the United Provinces, individuals were not admitted as members and the institutions became provincial unions of co-operative societies. In some provinces, like Bihar and Orissa, they became tederations of co-operative societies, while in others, like Bengal and Assam, they are known as co-operative organisation societies. Whatever the exact form assumed by these provincial institutions, their functions were more or less the same in all provinces, comprising propaganda and the locussing of non-official co-operative opinion on the various problems that contronted the movement from time to time. They have come to be regarded in an ever increa-sing measure as the third arm of the movement, the Registrar and his staff representing the administrative side performing more or less the functions assigned to them under the statute, the provincial bank with the central banks and banking unions representing the mandal side and as such concerned more with the financing of the movement and the institutes, umons, federations or organisation societies representing the propagandist side and as such concerned more with educating popular opinion and representing non-official views to the authorities A few years back, the All-India Co-operative Institutes' Association was established, with a view to co-ordinate the activities of the provincial institutes, to formulate non-official co-operative opinion on important

two societies was the ignorance of the members and the absence of trained men as office-bearers the provincial federation or union is obviously 6, societies. Illiteracy of the rural population, the best agency for this friendly and efficient bowever, has been found too big a problem for supervision. The combination of the functions these institutes and they have, therefore, at- of audit and of supervision as suggested by the

In Bombay, the Institute has created a special education board which maintains co-operative schools at different centres and conducts periodically training classes suitable for different types of workers and employees of co-operative societies. In the Punjab, however, co-operative education has been organised by the Co-operative Department, though the Punjab Co-operative Union renders active assistance therein. In Bihar and Orissa a permanent Co-operative Training Institute has been established at Sabour in the Bhagalpur Division which is controlled by a governing body which includes the Registrar, and a few representatives of the Co-operative Federa-tion. Madras has organised 6 training institutes, In the United Provinces, Bengal and the Central Provinces, arrangements for co-operative training and education have not yet been properly made, though there also it is the Department assisted by the provincial union which organises the training classes. The need for proper co-operative training and education has been felt in an increasing degree in recent years and the Central Banking Enquiry Committee has recommended very strongly the establishment of provincial co-operative colleges and an All-India Co-operative College for the higher training of more important officials in the Department, banks or societies. No action apparently has been taken till now on these recommendations, but there is no doubt whatever 'hat any serious attempt at improvement of the co-operative societies in the country must include a proper organisation of co-operative education not only for the officebearers of societies or the managers and inspec-tors of central and provincial banks but also for the inspectors, auditors and assistant registrars of the co-operative departments. The Government of India have for the last two years have placed at the disposal of each of the Provincial Governments about one lakh of rupees which were being devoted to a better organisation of co-operative training and education for the staff of the co-operative departments as also of other institutions.

In some provinces, like the Punjab and Bihar and Orissa, the provincial union or federation has been actively associated in discharging the Registrar's statutory function of the audit of societies and the Second All-India Co-operative Institutes' Conference held at Hyderabad (Deccan) in 1931 also expressed an opinion that the Registrar's statutory obligation in this matter could be discharged by a system of licensing and that audit should be a function entrusted to the provincial unions or federations If this idea of a uniform system of audit through 1011-official co-operative opinion of important the provincial unions be accepted, it will inactive operative problems from time to time and to encourage the growth of co-operative the responsibility for supervision of the co-operative societies. The departmental audit or inspection by the central banks cannot dispense with the need of careful supervision, the indicaps to the successful working of co-operative societies. which to be effective must be from within and

village uplift and carried on an intensive propaganda in that behalf which has led to the formulation of a scheme whereby the work is being carried on earnestly by District Committees under the guidance of the District Collectors, the work being co-ordinated by Divisional officers. The Punjab has appointed Mr. Brayne of Gurgaon fame as Commissioner for Rural Reconstruction and Bengal has made a similar appointment, and it appears that all provincial Governments are devoting considerable thought to this very important work.

Better Living Societies.—The Punjab has been responsible for Introducing this very desirable type of co-operative society to promote better living among its members. There are about 300 such societies in that province and they have been doing quite important work in their own way The societies do not collect any levy from their members, except the small entrance fee and they lay down a programme of work and make rules for carrying it out from year to year, violation of which is punishable with fine under the by-laws Though these societies in the first instance have for their object the curtailment of ruinous expenditure on marriages and other social occasions, they have also helped in various other matters, so that apart from saving to their members thousands of rupees each year, they are contributing to the general village uplift in some measure Some of these societies have levelled and paved and swept the village lands, some have promoted sanitation, some have induced the villagers to improve ventilation in their houses, some have repaired and roofed the village drinking well, some have arranged that all manure should be pitted, some have discouraged expenditure on photod, some have utcouraged expenditure on jewellery, and some have stopped waste on farms. Thus in a variety of ways these societies generally have been great factors in the improvement of control of the village. It is earnestly hoped that such better living societies will be started in large numbers in the various provinces of Incia or better still that the cooperative credit societies would take upon themselves the function performed by these societies and that the term better living be given as wide a connotation as possible so that the co-operative movement would be doing good to itself and the nation by carrying on the general work of village uplift, as well as its own economic objective of strengthening the position of the agriculturist.

Urban Credit Societies.—While the chief objective of the co-operative movement was from the first to do service to the rural population, it must be remembered that the Act of 1904 permitted two classes of societies,—rural and urban, recognising thus the suitability of the co-operative method for solving the problems of urban population also At present there are in all 11,118 non-agricultural societies with a membership of 13,19,151. Of these, 5,319 are credit societies, the rest being societies for other purposes.

An important class of the urban population is that of the merchants and traders, and though

small trader, it is co-operative banking that is obviously wanted. The importance of **People's**Co-operative Banks promoted for the benefit of urban people without any distinction of caste or creed is, therefore, very great, for the finance of small merchants, artisans and craftsmen for the stimulation of trade and industries in and around district and taluka towns. The principal business of these banks is short-term credit and in this respect they resemble the ordinary commercial banks. In the absence of any industrial co-operative bank, it is also for the peoples' bank to finance small industrialists and help the development of cottage industries, which still play a very considerable part in the industrial economy of India. Another very important function which falls to peoples' banks is the financing of the marketing of the produce of the land from the field to the port or to the principal market centres and thus assist in the development of the internal trade of the country. It is only, however, in the Bombay and Bengal Presidencies that we meet with some good institutions functioning as peoples' banks. In Madras there are 1,074 non-agricultural credit societies but most of these are not real peoples' banks. The Punjab has 1,000 unlimited liability societies and only 107 with limited liability Even here we hardly find any develop-ment of real peoples' banks. In Bengal the limited liability urban credit societies number 500 and though these societies seem to have won public confidence the more important of them are salary earners' credit societies. Some of the divisions especially the Chittagong divisions have several big concerns, however, working on sound lines. The question of starting Peoples' Banks in Bihar and Orissa has not yet Peoples Banks in Sinar and Orissa has not yet been seriously taken in hand. In the Bombay Presidency, institutions with a working capital of Rs. 50,000 and more are classed as urban tanks. Since 1922 co-operators in this Presidency have been very keen on having a full-fledged peoples' bank in every taluka town, for it has been realised that with the proper development of urban co-operative banking, there is no doubt that the various units will come into touch with one another and that mutual settlement of terms and co-ordinated and harmonious work will greatly assist the development of inland trading agencies. Peoples' banks are a repository of peoples' savings, a nucleus for co-operative activity and an institution giving facilities for internal remittance and it is quite necessary therefore that their share capital must be pretty large. In the Bombay Presidency on the 31st March 1932 there were 91 urban banks most of which are fairly successful The total membership was 1,39,379, the working capital was Rs. 3,57,60,347 and the reserve fund amounted to Rs. 19,44,622 It can be sald without exaggeration that the development of urban banking has been a distinct contribution of Bombay to the co-operative movement in India and other provinces might well follow Bombay's example in thidirection.

An Important variant of the urban co-operative society is the **Thrift Society** The system adopted is to collect regular savings every month the joint-stock banking system that has so far for a continuous period of two to four years developed in India is quite well suited in many invest the collected amount to the best advantage respects for them, from the point of view of the and pay back to the subscriber his amount at the

end of the term with interest. In many societies, loans are advanced also but not exceeding a certain fixed proportion, usually \$ of the deposits. The Punjab has about 1,000 such societies and the bulk of the members are school masters There are about 125 thrift societies for women only having a membership of about 2,000. Madras has also more than 100 thrift societies and Bombay has half a dozen. Recently however Life Insurance Societies have been started in Bombay, Bengal and Madras. The Bombay society was started in July 1930 and for a few months worked as a provident society only, issuing policies of Rs. 150 to Rs. 500 and that too without medical examination, the idea being to bring life insurance within easy reach of the small man in the village as in the town. It has no share capital and works on a mutual basis It has now, however, widened its scope and has been writing policies for larger amounts under its ordinary branch, while under the rural branch, besides the ordinary small policies, it has recently issued a scheme for decreasing term insurance, which will, it is hoped, meet the needs of the primary societies and their borrowing members much better. It has by now written a business of over Rs. 20 lacs. The Bengal society is yet a provident society issuing small policies, while the Madras society—the South India Co-operative Insurance Society has started vigorously as a full fledged life insurance society with share capital and comparatively low rates of premia, and has already written a large business of about Rs. 20 lacs.

Review.—The Co-operative Societies Act of 1904 had limitations which were soon recognised and at a conference of the Registrars, a bill was drawn up which became the Co-operative Societies Act of 1912. This Act remedied the defects of its predecessor, authorized the registration of societies for purposes other than credit, substituted a scientific classification based on the nature of the liability for the arbitrary one into rural and urban and legalised the registration of Unions and Central Banks.

In 1914 the Government of India reviewed the situation in a comprehensive resolution and recommended a change in the policy regarding the grant of loans to members, so that they might lend money for domestic purposes as well as for agricultural ones in order that the members might confine their dealings with the Co-operative Societies and be weaned from the sowcars. In 1914, the Maclagan Committee on Cooperation was appointed and its report in 1915 led to the reorganisation and overhauling of the whole administration of co-operation. Punctual repayment of loans was insisted upon, and all those societies that failed to live up to the ideal of co-operation were sought to be eliminated. from this time onwards the share of non-officials in the movement assumed increasing importance and it came to be realized that for the success of the movement, deofficializing of the same was heressary. The Government of India Act of 1'19 made co-operation a provincial transferred subject and the local Governments were left irce to adapt the 1912 Act to their own require-

The steady growth of the Central Financing been very remarkable and credit societies still Agencies relieved the Registrars partly of the predominate, especially the Agricultural Credit Societies.

in the development of co-operation; but propaganda still remained the function of the Registra and his staff, paid or honorary, and it was perceived that non-official institutions should be established to take over this function from official hands. Accordingly Co-operative Institutes were started in various provinces, in some cases as unitary societies reaching down to the village through their branches in the divisions and the district, in other cases as a federation or union more or less complete of the primary societies. The part these non-official bodies began to play henceforth became increaslingly important, some adding to the primary function of propaganda, others such as co-operative education, supervision over societies and even audit.

The steady progress of the movement—sometimes even too rapid—for nearly 20 years, however, was found hardly to lessen the eclossal burden of the indebtedness of the ryot, for cooperative eredit necessarily confined itself to short-term loans. It was in the Punjab that the first Co-operative Land Mortgage Bank was started at Jhang in 1920. Soon after other provinces also followed suit.

While the movement was developing at a rapid pace it was found that financially the situation was worsening. Defaults in repayment were becoming increasingly common and Co-operative Committees of Enquiry were instituted in various provinces. The Central Provinces thought it necessary to have such a committee in 1922, while Bihar and Orissa followed with a similar committee in 1923. A few years after the Oakden Committee made similar inquiries tor the U. P., the Townsend Committee for Madras and the Calvert Committee for Burma. These Committees have carefully analysed the position in their respective provinces and have made recommendations for the consolidation and rectification of the co-operative credit organisation and the extension of the non-credit side of agricultural co-operation. The powers conferred upon the Local Government by the Act of 1919 to modify the Act of 1912 have been exercised so far in but few provinces such as Bombay, Burma, Madras and Bihar and Orissa. Bombay passed the Co-operative Societies' Act of 1925 incorporating the suggestions made from time to time for the amendment of the previous All-India Act. This new Act made the object of the movement still wider than that of its predecessor and its preamble refers to "better living, better business and better methods of production" as the aim of the movement. The chief features of the Bombay Act of 1925 are the adoption of a scientific system of classification of societies, the improvement of the procedure for liquidation of cancelled societies, the extension of summary powers of recovery to the awards of arbitrators and the provision of penalties against specified offences. The Burma Act came into force in 1927 and the Madras Act in July 1932. Bihar and Orissa has also now passed a similar Co-operative Act of its own recently. The progress of the movement in forms other than credit has not been very remarkable and credit societies still The non-credit movement has had naturally more obstacles to overcome than the credit but he former is slowly gathering force in the shape of sale societies for cotton in Karnatak, Gujarat and Khandesh, cattle insurance societies in Burma and irrigation societies in Bengal and the Southern Division of the Bombay Presidency. Perhaps the most remarkable instance of the co-operative movement in India is to be found in the Punjab where consolidation of holdings has been successfully attempted through co-operation. In the non-agricultural non-credit sphere, a still smaller headway has been made. There are a number of housing societies especially in Bombay, Madras and Mysore, and artisans' societies and unskilled labour societies in Madras It may be noted that on the agricultural side, co-operative farming has hardly been touched and on the non-credit side the consumers' movement has made but meagre progress.

In 1926, the Royal Commission on Agriculture was appointed and co-operation formed only a part—though an important one—of its extensive enquiry. Recently, in consequence of the appointment of the provincial committees under the Indian Central Banking Enquiry Committee the co-operative movement in the different provinces has been surveyed. But the provincial provinces has been surveyed. But the provincial committees, for obvious reasons, confined their inquiries to banking in relation to agriculture, small industries and trade. Thus only those aspects of the co-operative movement which have an intimate bearing on the credit needs of the population and the development of banking itsellities have been examined, while the need for separate enquiries into the whole movement in the different provinces of the lipse of these in the different provinces of the lines of those undertaken in C. P., U P. and Madras and emphasised by the Royal Commission on Agriculture is still to be met. Bihar and Orissa recently got its movement examined by a com-mittee which has published its report last year. The Government of Bombay convened in June 1933 a Round Table Conference of official and non-official Co-op rators to discuss the problems that confronted the Movement in Bombay As a result of this Conference, three Committees were appointed, one to examine the system of supervision over Co-operative societies by the Supervising Unions in the Presidency, another to report on the best way to help the agriculturists in these times of falling prices and trade depression, and the third to examine the problem of extension of land mortgage banking on a Co-operative basis. These Committees have not yet submitted their reports, but there is little doubt that their recommendations would lead to a tightening up of supervision, an extension of land mortgage banking and efforts to meet the growth of overdue loans.

The growing difficulties of the Co-operative Movement throughout India in these times of unprecedented depression led the Government of India to hold an All-India Co-operative Conference at New Delhi on the 29th January 1934. This Conference was unique in so far as it was not restricted only to the Registrars

of Co-operative Societies and their advisers from the various provinces and States, but it also included some ministers in charge of Agriculture and Co-operation from the provinces and a representative of each of the two All-India Co-operative organisations—the Institutes' Association and the Provincial Banks' Association. This Conference recommended the enactment of an All-India Co-operative Societies Act so as to permit the registration of Co-operative Societies working in the whole of India or in more provinces than one - It also recommended earnest efforts for the development of land mortgage banks by the Government guarantee-ing not only the interest on their debentures but also the capital and suggested the creation of a Central Co-operative Board under the Imperial Government with a small establishment to bring about a closer co-ordination of work between the different provinces and States of India. This last suggestion has met with some opposition, since after the provincialisation of Co-operation under the Montford Retorms of 1914, the provinces do not much fancy the imposition of control from the centre And yet, there seems to be nothing wrong in the idea of a central organisation, which would be a clearing house for authentic information and stimulate progress through a careful study of experiments and efforts in particular areas and drawing attention of other areas to the success achieved or the deficiencies revealed.

It may also be mentioned that the Indian States were not slow in introducing the co-operative movement within their limits, and the movement in some of the more important of the States, such as Hyderabad (Deccan), Mysore, Baroda, Gwalior and Indore has made considerable progress, more or less on the same lines as those followed in the neighbouring British Indian Provinces.

The landmarks in the lustory of the co-operative movement in India are, the Co-operative Gredit Societies Act of 1904, the Co-operative Societies Act of 1912, the Maclagan Committee Report, 1915, the provincialisation of co-operation, 1919, the establishment of institutes, unions and federations for propaganda; the Committees of Enquiry into the co-operative movement in several provinces; provincial legislation; the Report of the Royal Commission on Agriculture, 1928; Reports of the Indian Central and Provincial Banking Enquiry Committees, 1931; and marketing surveys, debt conciliation schemes and land mortgage banking

The movement has thus developed rapidly and the stages of its evolution may be briefly summarised as—agricultural credit, urbaic credit; central credit organisations, apex co-operative banks; propaganda by non-officials; non-credit agricultural co-operation; urban co-operative banking; long-term loans and debt redemption schemes, land mortgage banks, co-operative education, rectification and consolidation of the credit movement; organisation of supervision over primary societies and rural reconstruction.

Societies: Literary, Scientific and Social.

AGRIOULTURAL AND HORTICULTURAL SOCIETY (THE ROYAL) OF INDIA (Calcutta).—Founded 1820. A Class Annual subscription Rs. 32. Entrance fee Rs. 8. B Class Annual subscription Rs. 12. Secretary: S Percy-Lancaster, F.L.S., F.R.H.S., M.R.A.S. 1, Alipore Road, Alipore.

AGRI-HORTICULTURAL SOCIETY OF BURMA.— Superintendent. T P Joyce, Agri-Horticultural Gardens, Kandawglay, Rangoon.

AGRI-HORTICULTURAL SOCIETY OF MADRAS.— Established 1835. Quarterly subscription for members in Class A Rs. 7, in Class B Rs. 3. President. H. E. The Governor of Madras; Chairman: Mr. C. A. Henderson, ICS Hon. Secretary: Mr. B. S. Nirody, B.A. Hon. Treasurer Mr. H. A. Buller, Teynampet, S. W. Madras.

ANTHROPOLOGICAL SOCIETY OF BOMRAY—Founded 1886, to promote the prosecution of Anthropological research in India; to correspond with Anthropological Societies throughout the world; to hold monthly meetings for reading and discussing papers; and to publish a journal containing the transactions of the Society. Annual subscription Rs 10 President: R P Masani, M A Hom Secretary Dr. N. A. Thoothi, B A, D Phil. (Oxon). Office Address: 172, Hornby Road, Bombay.

BENARES MATHEMATICAL SOCIETY.—Founded in 1918 for the encouragement and promotion of research in the various branches of Pure and Applied Mathematics, and in the History of Mathematics. It conducts a journal "The Proceedings of the Benares Mathematical Society" in which original papers on Mathematica are published and maintains a library. There are about 60 members from all parts of India. Admission fee Rs 10. Annual subscription Rs 12 (Resident members) and Rs 5 (non-resident members). President Dr. Lakshimi Narayan, M.A., D.Sc.; Secretary Prof. Chandi Prasad, M.A., B.Sc.; Treasurer Prof. Pashupati Prasad, M.A., B.Sc. 22. Sanpura, Boyares City.

IHANDARKAR ORIENTAL RESEARCH INSTITUTF, POONA.—The Institute was inaugurated on the 6th of July 1917, the 80th birthday of late Sir R. G. Bhandarkar, at the hands of H. E. Lord Willingdon, who became its first President. Its objects are to publish critical editions of texts and original works bearing on Oriental Antiquities, to provide an up-to-date Oriental Library, to train students in the methods of research and to act as an information bureau on all points connected with Oriental Studies. The valuable library of the late Dr. Sir R. G. Bhandarkar, which he had bequeathed already to the Institute, was after his demise handed over by his executors to the Institute, and is now located in the Central Hall of the Institute. Since the 1st of April 1918 the Government of Bombay have transferred to the custody of the Institute

the unique collection of nearly 20,000 manuscripts formerly in charge of the Deccan College, together with a maintenance grant of Rs. 3,000 a year. Government have likewise entrusted to the Institute a grant of Rs. 10,000 a year for the publication of the B. S. S. and the Government Oriental Series. The Institute has undertaken to edit Mahabharata critically (Battor-nc/hef Dr V S. Sukthankar), at the request of the Chief of Aundh who has promised a total grant of Rs one lakh for that purpose. Grants are being received from the Government of India (Rs. 4,000 a year), the University of Bombay (Rs. 3,000 a year) and the Government of Bombay (Rs. 6,000 a year), Burma, Hydera-bad (Decan), Baroda and Mysore as well as several Southern Mahratta States. The Institute has a Journal called "Annals of the Bhandarkar Oriental Research Institute published four times a year. It also held under its auspices the First Oriental Conference on the 5th, 6th and 7th of November 1919 under the patronage of H. E. Sir George Lloyd and the presidency of Sir R. G. Bhandarkar. Thanks to liberal donations from the Tatas and the Jain community, supplemented by Grants-in-Aid from the Government of Bombay, the Institute is housed in a fine building near the hills behind the Home of the Servants of India Society. Since August 1927 the Institute has been conducting regular MA. classes in Sanskrit, Pal, Ardhamagadhi and Ancient Indian Culture. Lectures by Eminent scholars are also delivered occasionally. Membership dues Rs 10 a year or Rs 100 compounded for hite Members can, subject to certain conditions, borrow books from the library and get the "Annals" free and other publications (a list covering about 100 titles sent free upon request) at concession rates Secretary Dr. V S Sukthankar, M A , Ph D.

THE BIARATA ITHIASA SANSHODHAKA MANDALA, POONA—Founded in 1910 by the late Mr. V. K. Rajwade and Sardar K. C. Mehendale and registered under Act XXI of 1860 in 1916 with the object of collecting and conserving historical materials, erecting audable buildings for preserving and exhibiting them, publishing such materials and other works of historical research and generally to encourage and foster critical study of and research in Indian history. BOMBAY SANITARY ASSOCIATION .- Founded to create an educated public opinion with regard to sanitary matters in general; (b) to diffuse the knowledge of sanitation and hygiene generally, and of the prevention of the spread of discase amongst all classes of people by means of lectures, leaflets and practical demonstrations and, if possible, by holding classes and examinations; (c) to promote sanitary science by giving prizes, rewards or medals to those who may by diligent application add to our knowledge in sanitary science by original research or otherwise, (d) to arrange for homely talk or simple practical lectures for mothers and girls in the various localities and different chawls, provided the people in such localities or chawls give facilities. The Sanitary Institute Building in Princess Street, which has lately been built by the Association, at a cost of nearly Rs. 1,00,000 the foundation stone of which was laid by Lady Willingdon in March, 1914, and opened in March, 1915, is a large and handsome structure with a large Lecture Hall, Library, Museum, etc , and also provides accommodation for King George V. Anti-Tuberculosis League Dispensary transferred to the Municipality in 1924 and Museum and the office of the Assistant Health Officer, ('and I) Wards, and the Vaccination Station. Hon. Secretary: Dr. J. S. Nerurker, B. SC., L. M. & S. D. P. H. (Cantab.), Executive Health Officer, Bombay.

BRITISH AND FOREIGN BIBLE SOCIETY—Since 1811 the British and Foreign Bible Society has been at work in this country. It has 6 Auxiliaries in India and an Agency in Burma. The first Auxiliary was established in Calcutta, in 1811, then followed the Bombay Auxiliary in 1813, the Madrautilary in 1820, the North India Auxiliary in 1845, the Punjab Auxiliary in 1865, the Bangalore Auxiliary in 1875, while the Burma Agency was founded in 1899. The

Bible or some portion of it is now to be had in over 100 different Indian languages and dialects and the circulation throughout India and Burma reached 1,140,258 issues in 1934 The Bibles, Testaments, and Portions in the various vernaculars are sold at rates which the very poorest can pav and at considerable loss to the Society. Grants of English Scriptures are made to Students who pass University examinations, as under

The New Testament and Psalms to Matriculates and the Bible to Graduates.

Portions of Scriptures in the important vernaculars have been prepared in raised type for the use of the Blind and large grants of money are annually given to the different Missions, to enable them to carry on Colportage and Bible Women's work. Besides the British and Foreign Bible Society, there is Bible work carried on in India, and Burma in a nuch smaller way by the Bible Translation Society—which is connected with the Baptist Missicary Society—the National Bible Society of Scotland, the American Bible Society and the Tranquebar Tamil Bible Society.

The following table shows the growth in the British & Foreign Bible Society's work during the past few years in India and Burma:—

Ilon. Secretary, Gulamhusem monthly). Viriee

ROYAL SOCIETY OF ARTS, INDIAN SECTION.— This Society was founded in 1754 "for the encouragement of Arts, Manufactures and Commerce," and devotes itself primarily to the application of science and air to practical purposes. The Society ranks as one of the three oldest learned societies in England, and numbered among its early members most of the famous Englishmen of the 18th century During its long history it has been the source of many retorms and improvements in all branches of art and industry, and it is from its activities that most of the more specialised British societies have sprung

The Society has from its carliest days extended its interests and membership to all parts of the British Empire, and in 1869 it founded an Indian Section, and a little later a Diminions and Colonies Section The Indian Section is under the control of a Committee comprised largely of former Lieutenant-Governors of Provinces, and others who have held the highest Indian administrative posts. Under its auspices a series of important lectures on Indian subjects is given each year, which, with the other lectures delivered before the Society, are published in the weekly "Journai" and circulated to members of the Society all over the world There are a large number of Fellows resident in India Patron H M the the world There are a large number of Presidencies. During natural calamities such Fellows icsident in India Patron H M the King, President H R H the Duke of Connaught, Chairman of Council Colonel Sir A Henry McMahon, a c m a, a c v o, become a household name in Malabar. Mr. K o I E., C S I; Chairman, Indian Section Sastri was for many years a member of the Committee Sir Athl C Chatetjee, a C I E, a Madras University Senate. Mr. Kunzu is a K.C.S.I., Secretary. W. Perly, M.A., Assi-

tant Secretary and Secretary, Indian and Dominions and Colonies Sections K W Luckhurst, MA; Society's House . 18, John Street, Adelphi, London, W C 2.

SERVANTS OF INDIA SOCIETY. -The Servants of India Society, founded by the late Hon. Mr. G. K. Gokhale in 1905, is a body of men who are pledged to devote all their lives to the service of the country on such allowances as the Society may be able to give. Its objects are to train national missionalies for the service of India and to promote, by all constitutional means the interests of the Indian people. Its present strength is 23 Ordinary members, 7 members under training, 1 and 6 probationers permanent assistant, The Society has its headquarters in Poona with branches at, Madras, Bombay, Allahabad and Nagpur and other centres of work at Dohad in Gujerat; Mayanur, Combatore, Mangalore and Calcut in the Madras Presidency, Lucknow in U.P., Lahore in the Punjab and Cuttack in Origea.

The Society's work is primarily political but as it believes in all round progress of the Indian people, it has always laid equal emphasis on social, economic, educational, labour and depressed class activities and has worked in these fields The political work is done through the legislatures the non-official political organizations, deputations to foreign countries and propaganda

In the field of social, economic and educational work, the Society's activities are equally varied Some of its members are practically the founders of such institutions as the Poona Seva Sadan, Bombay and Madras Social Service Leagues, the U P Seva Samil, the Bhil Seva Mandai catering for the needs and uplift of the abortunal tribes in Guerat. The Seva Sadar bare ginal tribes in Gujerat The Seva Sadan has been a model institution for the education of women which gives training to over 1,500 giris and women in all useful directions. It has many branches in different parts of India carrying on social and educational work. The Social Service League has done good co-operative, educational and welfare work for the mill workers in Bombay by starting Co-operative Societies, adult night and technical schools and workers in conducting welfare centres. The Seva Samiti is an unique organization in Upper India doing service to the pilgrims going to religious places such as Hardwar and Benares, and working in times of epidemics. Its Boy Scouts organization is a well-knit body recognised both by the public and Government. Mr. Chitaina conducts the Bhagmi Samaj for social, educational work among the Gujarati ladies The Society has been conducting a model Depressed Class Mission in Mangalore and the Devadhar Malabar Reconstruction Trust activities at Calicut In the Co-operative movement the Society has done the pioneering work in the Bombay and Madras presidencies. During natural calamities such

sity Senates and Syndicates and Mr. Dube, a member of the Lucknow University Court and of the Lucknow District Local Board.

The Society conducts three papers —The Servant of India, an English weekly of which Mr. S. G. Vaze is Editor, the Dnyan Prakash, the oldest Marathi daily of which Mr. Lamaye is the Editor and the Hukuwad, a bi-weekly. Mr. Parulekar conducts the All-India Trade Union Bulletin, and Mr. A. V. Patwardhan. the Sansthams Swaray, a Marathi weekly for the benefit of the subjects of Indian States. The Society has also published several pamphlets on public questions of the day.

The question of the subjects of the Indian States has also engaged the attention of the Society and some of its members, particularly Messrs. A V. Patwardhan, S G Vaze, and A. V. Thakkar are devoting a part of their energies for that work.

Mr. H. N. Kunzru, is the Vice-President and Mr S G Vaze, the Secretary Messrs. V Venkatasubbaiya, Joshi, Kunzru and Dravid are senior members of the four branches.

The Society is a non-communal, non-sectarian body which does not recognise any caste distinctions.

SEVA SADAN—The Seva Sadan Society was started on the 11th of July 1908 by the late Mr. B M. Malabari and Mr. Dayaram Gidumal. It is the pioneer Indian ladies' society for training Indian sisters ministrant and serving (through them) the poor, the sick and the distressed. To spread its Gospel far and wide, the first branch was opened at Poona as early as 1909. The Society has its headquarters in Gamdevi, Bombay. The Society maintains the following departments of work. (1) Home for the Homeless (2) Ashrams (Training Homes); (3) Marathi Normal Classes with a primary School (4) Home Education Classes, (5) Industrial Department including a workroom, Sewing, Cutting, Hosiery, Cooking and Pastry and machine and hand Embrodery are among the chief industries taught Total number of women in the different classes is nearly 300. Secretary, Miss B. A. Engineer, M.A., LL B., M. R.E., J.P.

Consumptives. Homes Society—This Society was started by the late Mr. B. M. Malabari and Mr Dayaram Gudumal on the lat of June 1909. It was registered under Act XXI of 1860 Mr. Malabari secured a large grant of land in a Himalayan plne forest in Dinarampur (Simla Hills) from H. H. the Maharaja of Patiala, for a Sanatorium for Consumptives, His Highness also gave a donation of Rs. one lakh. In 1911 by special permission the Sanatorium was named "The King Edward VII Sanatorium." The Sanatorium has its special water works known as the Lady Hardinge Water Works, presented by the late Sir Chinubhat Madhavlal, Bart., of Ahmedabad. The Sanatorium has a Guest House: The Noshirwan Adul Guest House for visitors to Dharampore. It has accommodation for 90 patients including the special Punjab Block built from a grant of the Punjab Government and reserved

for European patients. Most of the blocks and cottages are built by Parsis. The Sanatorium has its own dairy and is called the Bal Purojbai R H. Patuck Dairy. The Sir Chinubhai Madhavlal Dispensary has an out-patient department. The Recreation Hall is called "The Sir Bhupinder Singh Recreation Hall" after the name of the Maharaja of Patiala. Mr Malabari collected an Endowment Fund of about Rs. 67,000 lodged with the Treasurer, Charitable Endowments, under Act VI of 1890. Nearly Rs. 3,06,000 have been spent on laying out the sites buildings, etc., and the current annual expenditure is about Rs. 56,000. The Senior and Junior Medical Officers are in charge of the Sanatorium. The Office of this Society is situated at the Seva Sadan Buildings, Gamdevi, Bombay. Mr S. P. Wadia is the Hon. Secretary and Diwan Bahadur K. M. Jhaveri is the Hon. Treasurer.

WESTERN INDIA NATIONAL LIBERAL ASSOCIATION—(Founded in 1919).—The Association was formed, in pursuance of clause (b) of Resolution XI of the First Session of the All-India Conference of the Moderate Party, with a view to do sustained work for the political progress and the moral and material welfare of the people; to give expression from time to time to the considered opinion of the Party on matters of public interest; and to inform and educate public opinion in this presidency in support of its views, policy and methods.

The objects of the Association are the attainment by constitutional means of full Dominion Status for India at the earliest possible date. For the promotion of these objects, the Association shall adopt constitutional methods of agritation and work and shall foster a spirit of broadminded liberalism based on principles of liberty, equality and fraternity among the different classes and communities of the people. For the fulfilment of these objects the Association shall carry on educative, and propagandist work by means of lealiets, pampilets and other publications, (a) representations to Government, (c) meetings or conferences, lectures and all such methods as may be deemed practicable and expedient to educate public opinion, and (d) for advancing the interests of the Liberal Party by organising and influencing elections to the legislatures, Central and Provincial, to Municipalities and District Local Boards.

The affairs of the Association are conducted by a Council consisting of 46 members who are elected every two years.

President Sir Chimanial H Scialvad, K.C.L.E., Li.D., Vice-Presidents The Hon Sir Phinoze C. Sethina, K.T., O.B.E. and Sir Cowsp. Johangir (Jr.), K.C.I.E., Hon Secretaries Mr. Kazi Kabliuddin, Mr. J. R. B. Jeejcebhoy and Mr. A. D. Shroff Assistant Secretary Mr. V. R. Bliende.

Office:—107, Esplanade Road, Fort, Bombay WOMEN'S INDIAN ASSOCIATION ("EVERIST." MYLAPORE, MADRAS)—This Association was started in Madras, in July 1917, with aims of service.

Aims and Objects —To present to women their responsibilities as daughters of India To secure for every gul and boy the right of Education through schemes of Compulsory Primary Education, including the teaching of roligion. To secure the abolition of child-

marriage and to raise the Age of Consent for marriage girls to sixteen. To secure for women the vote for Municipal and Legislative Councils on the same terms as it is or may be granted to men. To secure adequate representation of women on Municipalities, Taluk and Local Boards, Legislative Councils and Assembles. To secure for women the right to vote and to be elected for the Council of State. To establish equality of rights and opportunities between men and women. To help women to realise that the future of India lies largely in their hands; for as wives and mothers they have the task of training, guiding and forming the character of the future rulers of India To band women to groups for the purpose of self-development and education and for the definite service of others.

It has 48 branches and over 4,000 members Each branch is autonomous and works according to the needs of the locality.

The Association grants scholarships to girls. interests women in maternity and child-welfare work in the uplift of the depressed class and in other social and welfare activities for the general betterment of Indian society, has worked successfully for securing Franchise for women in India, (see pages 93 and 94 of the Smon Report, Vol II) and compulsory education for girls and also actually helped in the passage of Child-Marriage Restraint Act in the Assembly and the Acts for the Suppression of Traffic in women and children and the abolition of the Devadasi system, in the local legislature Holds regular meetings of women to educate them as to their duties as wives, mothers and citizens, publishes a monthly magazine titled Stri-Dharma, now edited by Di (Mrs.) S. Muthulakshmi Reddi for carrying out of the above objects Association is an All-India body. Its largest branch being in Bombay and its branches are spread throughout India and flourishing as far as Kashmir and Lashkar. It is found that women everywhere welcome the opportunities given for their self-development and selfexpression The Association is affiliated to all the important progressive women associa-tions in India and throughout the world. It was the mitiator of the All-India Women's Conference and the First All-Asian Women's Conference at Lahore The Madras Seva Sadan and the Madras Children's Aid Society, the Montessori School owe their origin to the efforts of this Association The Association have now opened a Rescue Home to facilitate the working of the Rescue Section of the Immoral Traffic Act, which have been en-forced by Government The Home was opened on 21st March 1934 by Lady Beatuce Stanley.

YOUNG MEN'S CHRISTIAN ASSOCIATION.—
This Association, which was founded by the late Sir George Williams in 1844, is now a world-wide movement, well established in almost every country in both the hemispheres.
The aim of the Association is, through its religious, social, educational, and physical work to answer the fourfold—spiritual, social, mental and physical—needs of young men and boys.

The Young Men's Christlan Association, Young Women's Christian Association of though relatively new to India, is spreading rapidly. The 'local' Associations are autonomous and governed by local Boards of Directors. These Associations in Convention elect a National Council which is responsible for the supervision and expansion of all forms

Associations with many thousands of members of all races and creeds. The following Associations own one or more buildings which serve as the local headquarters .- Allahabad , Alleppey; Rangalore; Bombay, Calcutta; Calicut; Colmbatore; Colombo, Delhi; Galle; Hydera-bad; Jubbulpore; Kandy; Karachi; Kunnarakulam; Kottayam; Lahore, Madras; Madura; Nagpur; Nalni Tal; Ootacamund; Poona; Rangoon; Risalpur; Secunderabad; Simla; Trivandrum; Wellington. The others use rented or rent-free buildings.

The work of the National Council and of the local Association is carried on by numerous voluntary workers and Committees, assisted by 85 specially trained full-time Secretaries A feature of the Y.M. C.A. in India is the international character of its Secretariat international character of its Secretariat It is made up of 7 Americans, 2 Canadian, 5 Englishmen, 3 Scotchmen, 1 Swiss, 1 Swedish, 4 Anglo-Indians, 1 Dane, 2 Australians, 1 Burman and 58 Indians and Ceylonese.

The work of the National Council (excluding that of the 50 local Y.M.C.As.) called for a Budget of Rs. 1,25,662 in 1933. Of this sum Rs. 28,790 had to be raised from the public ln India

The Headquarters of the National Council is 5, Russell Street, Calcutta. The officers are :

Patron:-His Excellency the Earl of Willingdon, G.M.S.I., G.M.I.E., G.C.M.G., G.B.E., Vicercy and Governor-General of India President of the National Council:—The Most Rev. Dr. Foss Westcott, Metropolitan of

India.

General Secretary '-B L. Rallia BSC, BT.

Corporation Street, time of the workers and their familles. The Calcutta The official organ of the Association Association is responsible for the direction of its the leaflet "Everymember" which is issued three public playgrounds in the city, which each month and sent to members and friends of the Association

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects

- (1) To facilitate Intercommunication and co-operation between women belonging to the universities of the United Kingdom, resident in India.
- (2) To provide a means of keeping in touch with the universities of the United Kingdom. by communication with the British Federa-tion of University Women, and otherwise as may seem expedient.
- (3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university

Membership is open only to those women who hold degrees in any university in the United Kingdom, or hold Oxford or Cambridge Honours Certificates; but Associate Membership is open to women who have studied at a British University for two years and each Branch may admit as Honorary Members women who have advanced the higher education and interests of women.

The Association of British University Women has two branches. The addresses of the Honorary Secretaries are as follows:—

Hony, Local Secretaries.

Bombay

. Mrs. C. M Scott, Divisional Engineer's Quarters, Central Telegraph Office, Bombay.

Punjab

.. Mrs. Skemp, Race Course Road, Lahore.

The Delhi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches are influential and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. All Branches have, for instance, made investigations on behalf of the Education Department, Government of India, the Calcutta University Commission, etc., and have supplied, through the International Federation of University Women, information on Secondary Education in India to the League of Nations. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products.

The Bombay Branch has done good work in connection with the formation of the Social Purity Committee and has, through a special sub-committee, organized public meetings for women on subjects affecting their interests about which legislation was being or had been recently enacted.

A valuable part of the work of the Association was the establishment of Women's Association was the establishment of women's Employment Bureau in Calcutta and Bombay. They were remarkably successful. Lahore, Madras, Kodaikanal. Each Drame. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council; the Calcutta Bureau has the Cal

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

This Association is Federated to the "Federation of University Women in India," and thus forms one of the Units of the Indian Federation.

Federation of University Women in India.

This is an organization conceived to unite for service and fellowship all University Women of whatever race or University who may be readent in India. Units representing British Universities, Indian Universities and American Universities severally have existed since 1913 (Britain) and 1920 (India and America) respectively.

These Units are now affiliated to the F. U W. I. and are as such affiliated to the International Federation of University Women which embraces 31 countries of the world and has its headquarters at Crosby Hall, Cheyne Walk, London.

This International Federation is then a kind of League of Nations in which the University is the Unit: and the opportunities it affords for better understanding for world-friendship, and world-service, will easily be imagined.

As forming one Family, its Members help the common cause of women: they help one another by inspiration and interchange of service they help the country for which as individual Units they stand, inasmuch as that country is swept forthwith by reason of its place within the Inter-national Federation alone, into world statistics and the dignity of recognition by the League of Nations at Geneva.

The benefit to Members individually also is great. The Club Houses of the Federation all over the world are open to them Equally so are all Scholarships and Fellowships offered by the Federation.

During 1929 these last have included. Scholarships from Great Britain and America which gave free tuition, board and residence at certain Colleges to students for a degree resi-dential scholarships at Crosby Hall, valuable Fellowships and Prizes offered chiefly for Medical or Scientific research by Australia and America

A special scholarship was offered in 1929 by Barnard College, Columbia University to under-graduates from India.

Membership is open to Women Graduates of any University through the Unit representing that University. Colonial Graduates are at present attached to the British Unit.

The Federation has Branches in Bombay,

OFFICE BEARERS, CENTRAL COMMITTEE.

Pending the formation of a Central Committee for 1936, all communications, till further notice should be sent to .—

Mrs. Mokenzie, M A., J P, Wilson College, Chowpatty, Bombay 7.

Applications for membership should be made to the Honorary General Secretary who will forward the same by the Local Secretary to whose Unit it may appertain.

ASSOCIATION OF COLUMBIA UNIVERSITY ALUMNI IN INDIA—This is an organization conceived to unite for service and fellowship all Columbia alumni who may be resident in India. It was founded in 1931, and is a constituent member of the Alumni Federation of Columbia University, New York, U S A There are more than fifty such Columbia Associations including one in London, Paris, Madrid and Berlin. The India Association has its Headquarters in Bombay.

President of the Association: Dr. Jal Dastur C. Pavry, M A., Ph D, 63, Pedder Road, Malabar Hill, Bombay.

- Solo (SOERAKARTA), JAVA President A T. Jansse Honorary Secretary W A Vawder Voordaa, Post Office Every Wednesday at 8-30 p.m., Societeit de Harmonic.

The Church.

March 1, 1930, a 'elf-governing branch of the Anglican Communion. Until that date it had been an integral part of the Church of England and its bishops were considered to be suffragans of the Archdiocese of Canterbury This legal bond was severed by the passing of the Indian bond was severed by the passing of the Indian Church Act and Measure in 1927, and from the date of severance appointed under the Act, the Church of India, Burma and Ceylon has been free to manage its own affairs, although, as it states in the Preamble to its Constitution, it has no intention or desire "to renounce its obligations to the rest of the Holy Catholic Church and its fundamental principles, but on the contrary acknowledges that if it should abandon those fundamental principles it would break spiritual continuity with its past and break spiritual continuity with its past and destroy its spiritual identity"

Like all the other branches of the Anglican communion the Church of India, Burma and Ceylon is Episcopal It is composed of fourteen Ceyion is Episcopal to is composed of fourteen sees, Calcutta, Madras, Bombay, Colombo, Lahore, Rangoon, Travancore and Cochin, Chota Nagpur, Lucknow, Tinnevelly and Madura, Nagpur, Dornakal, Assam and Nasik Of these the first to be erected was Calcutta in 1814 and the last was Nasik in 1930. Vacancies on the Episcopal Bench are filled by election, each diocese electing its own bishop. The Bishops rule the Church and to them is reserved the final word in all matters of faith and order, but they rule in conjunction with a system of Councils which has been framed so as to give the greatest possible amount of represen-tation to the whole body of the faithful. The foundation of the system is the Parochial Council of which the Parish Priest is the convenor and charman. Every baptised, and confirmed member of the Church residing in the parochial area who contributes, in some recognised way, to the financial support of the Church, is a member of the Parochial Council of the ecclesiastical area in which he resides and is called a Qualified Elector.

Above the Parochial Councils come the Diocesan Councils. All Priests holding the Bishop's license are members of the Diocesan Council and to it are sent Lay Representatives elected by the Qualified Electors of every Parochial Council. The Diocesan Councils manage all purely domestic matters and have the right of petitioning the General Council about any subject of wider importance which may interest them. They elect a given number of priests and laymen to be their representatives on the General Council General Councils are held not less than every three years and usually at Calcutta. They consist of three "Houses," Bishops, Priests and Laymen Every Diocesan Bishop has a place in the House of Bishops The other two Houses are formed by the elected

The Church of England in India became on | but any House has the right to meet alone if it desires to do so in order to formulate its If it desires to do so in order to formulate its policy or classify its opinions. A "Canon" of the Church is a Resolution passed with additional precautions ensuring due consideration by all three Houses in all questions touching faith or Order the position of the episcopate as the divinely authorised teacher of the Church is most carefully safeguarded and the Bishops alone, without the concurrence of the other Houses, can issue Determinations. of the other Houses, can issue Determinations about both subjects But no Determination of the Bishops can be the subject of disciplinary action until it has become a Canon.

Every priest before being licensed to work in the Church of India, Burma and Ceylon takes an oath of obedience to the Canons.

The Ecclesiastical Establishment —At the time of the passing of the Indian Church Act and Measure the Government of India acknowledged that it was responsible for providing for the spiritual needs of the Soldiers and Civilians whom it brought out to India responsibilities it discharges by maintaining an establishment of chaplains and churches for the four principal denominations of Christians— Anghean, Presbyterian, Roman Catholic and the Free Chu.ches. The Chaplains of the two first named groups are appointed by the Secretary of State for India, the Angheans on the recommendation of a Selection Committee the recommendation of a Selection Committee of which the Archishop of Canterbury is the Chairman They are paid by Government and pensioned after a covenanted period of service. Although they form a definite Department of Government they are not subject to the orders of anyone says that any perfections. orders of anyone save their own ecclesiastical superiors. The Presbyterian Chaplains are sometimes appointed to stations and sometimes to regiments. The Anglican chaplains are always chaplains of stations and have the pastoral care of all the inhabitants of the station who do not deliberately withdraw themselves from their ministrations, but when troops are included in the number of their parishioners Government orders that they shall have the first claim on their services. The chaplains and their congregations are members of the Church of India, Burina and Ceylon during their residence in India and have full rights of representation in the Councils of the Church. Their right to the use in worship of the Prayer book of the Church of England is not only acknowledged in the Constitution of the Church but is also safeguarded by clauses in the Indian ('hurch Act.

Government gives to the Metropolitan an annual block grant which is divided between the seven bishops whom Government recognises as having jurisdiction over the Establishment Chaplains and their congregations. These representatives of the Diocesan Councils. The are the Bishops of Calcutta, Madras, Bombay, three Houses usually sit and vote together. Lahore, Lucknow, Rangoon and Nagpur

before 1930 they formed part of the Establishment. One of the difficulties which the Church is facing is that the Government Block Grant is racing is that the overnment Block cratiis not large enough to provide for all the needs
of these bishops. In consequence the Church
is struggling to raise Diocesan Endowment
Funds to make up deficits. More serious
still, however, is the situation brought about
by the action of Government in 1924, when by the action of Government in 1924, when in pursuance of a general policy of economy necessitated by post-war conditions it cut down the number of its chaplains by sixty. This set the dloceses a very difficult task. It became necessary suddenly to provide the salaries of Diocesan Chaplains and to furnish funds for the upkeep of the churches of many civil stations previously maintained by Government, Reallang the magnitude of this hurden flavern-Realising the magnitude of this burden Government agreed to help for a period of seven years by means of a very generous Block Grant. The question of the reduction of this grant is now under consideration. If the grant is considerably reduced the situation in most dioceses will be very serious. Either the Church must raise and devote to its European work a greatly increased sum of money or many of the churches in up-country stations will have to be closed. The chief sufferers will be the Anglo-Indian and Domiciled community which on account of "Indianisation" is less able than ever to carry the burden which it seems must inevitably be laid upon it. The difficulty of raising funds for the education of the children of this community and of obtaining priests to work for it becomes greater year by year. Nevertheless the Domiciled Com-nunity is the backbone of the Church in India and it is through this community that the conversion of India must come.

The Churches in India have not been wholly blind to these facts and have made desperate attempts to cope with the needs of the community in spite of lack of real support from home. The education of its children is very largely in the hands of the Christian is very largely in the hands of the Chiristian denominations though there are a few institutions such as the La Martinier. Schools, on a non-denominational basis, but they are exceptional. In all the large centres there exist schools of various of Ruropeans and Anglo-Indians under the control of various Christian bodies. The Roman Catholic Church is honourably distinguished by much activity and financial generosity in this respect. Her schools are to be found throughout the length and breadth children at Kalimpong, near Darjeeing. Schools of all denominations receive liberal grants-inaid from Government, and are regularly in-

Christian Missions.

The tradition that St. Thomas, the Apostle, was the first Christian missionary in India is by no means improbable. History, however, carries us no further back than the sixth century, when a community of Christlans is known to have existed in Malabar. Since then the so-called Syrian Church in south-west India has had a continuous life. Except in its infancy this Church (or rather these Churchs or the Syrian Christians are now divided into four communions) has displayed little of the missionary spirit until quite recent times. Western Christianity was first introduced into Western Christianity was first introduced into India by the Portagueses, who established their hierarchy throughout their sphere of influence, Goa being the metropointical see of the Indies. St. Francis Xavier, a Spanlard by race, took full advantage of the Portuguese power in Western India to carry on his Christian propaganda. His almost super-human zeal was rewarded with much success, but many of the fruits of his labour were lost with the ability age of the Portuguese France It. the shinkage of the Portuguese Empire. It the shinkage of the Portuguese Empire. It is really to the work of the missionaries of the Propaganda in the 17th century that the Papacy owes its large and powerful following in India to-day. The Roman Catholics in India number 2,708,598. The total of "Syrian" Christians (exclusive of those who while using the Syrian liturgy, are of the Roman obedicuce) is 517,217, as against the Roman obedicuted in the Christians (the term throughout the satisfic backets. the term throughout this article includes Anglicans) number 3,002,558, an increase of 547,000 since 1911. Thus, the total number of Christians of all denominations in India is now over six millions,

British India was opened to Missions by the Government of India Act of 1813, and the work of the Protestant missions, previously confined to Dutch and Danish India and a tew Indian States, may be regarded as having begun to assume its present scale from that date. The statistical results are given above. It is now, however, generally recognized that Christian missions are producing indirect effects in India which lend themselves only incompletely grades as well as orphanages, for the education to any sort of tabulation. The main agency of Ruropeans and Anglo-Indians under the of this more diffusive influence of Christianity is the missionary school and college. The Protestant missions fill a considerable part in the elementary education of the country. According to the 1923 Report of the National Christian Council for India they are teaching 420,255 children in 12,609 e mentary schools, of the Indian Empire; and they maintain a 420,255 children in 12,699 e mentary schools, high standard of efficiency. The Anglean mostly situated in villages The majority Church comes next, and the American Metho (243,894) of children in these schools are non-dists have established some excellent schools (Christians. The same is true also of the secondin the larger hill-stations. The Presbyterians dary schools and in a still greater degree of the are also well represented in this field, particularly by the admirable institution for destitute colleges. Fillipsed female pupils There are 40 colleges affiliated to Liuwersties continued. dary schools and in a still greater degree of the colleges. The former number 523 with 70,254 male and 25,303 female pupils. There are 40 colleges affiliated to Universities, containing 20,062 male and 1,309 female students. Oil these as many as 14,148 are non-Christians. spected by the Education Departments of the From the standpoint of missionary policy much various provinces. Thanks to the free opera- importance is attached to these agencies for the tion of the denominational principle and its indirect propagation of the Christian faith. The frank recognition by Government, there is no statesman and the publicist are chiefly inter"religious difficulty" in the schools of the ested in the excellent moral effect produced

European and Anglo-Indian communities by these institutions amongst the educated

classes, and the higher educational ideals dom. These divisions are due to a very much maintained by their staffs. The principal greater extent than is always recognized to University colleges under Protestant auspices are the Madras Christian College; the Duff of the sixteenth and seventeenth centuries, College, Calcutta; the Wilson College, Bombay; when they became crystallised, India had no the Forman College, Lahore, and three women's three women's Christian College at Lucknow, and the Women's Christian Medical College to Undation seem to be of very little account now, and the Roman Catholes have a lorse the Lucknow. The Roman Catholes have a lorse the Lucknow of the Roman Catholes have a lorse the Lucknow of the Roman Catholes have a lorse the Lucknow of the Roman Catholes have a lorse the Lucknown of the Roman Catholes have a lorse the Lucknown of the Roman Catholes have a lorse the Lucknown of the Roman Catholes have a lorse the Lucknown of the Roman Catholes have a lorse the Lucknown of the Roman Catholes have a lorse the Lucknown of the Roman Catholes have a lorse the Roman Catholes have the Roman Catholes h now, and the Women's Christian Medical College to Indian converts. For them the great dividual than a The Roman Catholics have a large number of educational institutions, ranging or Shiva and Vishnu. Standing before a backfrom small village schools to great colleges ground of paganism they are conscious of a real preparing students for University degrees undamental unity in Christ. Compared with the But the proportion of Christian students in their institutions is very much larger than their institutions is very much larger than their institutions is very much larger than from non-Christian, the differences of "connection of literates amongst native Roman and "order" which separate Christian from Christian seem to be wholly articatholics is probably lower than amongst the reunion movement, which is noticeable all Hindus and Mahomedans it is conspicuously lower the world, is nowhere so strong as in India, thas already resulted in the higher The Roman Catholics have some In South India it has already resulted in the 3,000 elementary schools in which 98,000 formation of the South India United Church, boys and 41,000 girls are receiving instruction which is a group union of five of the principal

More recent, but producing even more wider spread results, is the philanthropic work of Christian missions. Before the great famine of 1878, missionaries confined themselvet almost exclusively to evangelistic and educational activity. The famine threw crowds of destitute people and orphan children upon will retain the freedom of development characteristics. their hands. Orphanages and industrial schools became an urgent necessity. But the philanthropic spirit is never satisfied with Episcopate, it will be linked up with the Catholic Episcopate, it will be linked up with the Catholic one kind of organisation or method. A great stimulus was also given to medical missions. stimulas was also given to medical missions. Hospitals and dispensaries have spring up in all parts of the mission field; and leper asylums are almost a monopoly of Christian missionary effort. In 1911 the total number of medical missionaries working under Protestant societies in India was 118 men and 217 women, the majority of the former being also ordained ministers of religion. There are 184 industrial institutions in which 59 different arts and crafts are taught, ranging from agriculture to type-writing. In this department the Salvation Army hold a prominent place; and the type-writing in this department the Salva-tion Army hold a prominent place; and the confidence of Government in their methods has been shown by their being officially entrusted with the difficult work of winning over certain criminal tribes to a life of industry. The indirect effect of all this philanthropic activity under missionary auspices has been activity under missionary auspieces has been conscience of the non-Christian public, and such movements as "The Servants of India" missionaries of the C and the mission to the Depressed Classes are merely the outward and visible sign of a great stirring of the philanthropic spirit far community of 2,21, beyond the sphere of Christian missionary adult communicants.

more acutely than Europeans the scandal Diocesan institutions, which, while financed and and disadvantage of the divisions of Christen-in many cases manned by the S. P. G, are

boys and 41,000 girls are receiving instruction in uiddle and high schools they have received and 13,000 boys and 73,000 girls and in Ungersty colleges about 5,000 students of both sexes. These figures, however, include a large proportion of Europeans and Eurasians, who are an aimost negligible quantity in Protestant mission schools and colleges.

More recent, but producing even more wider. ail the Christian bodies in South India, except will retain the freedom of development charac-Episcopate, it will be linked up with the Catholic tradition of the Anglican Church.

Anglican Missionary Societies.

The Church Missionary Society carries on work In India in seven different missions—the United Provinces, South India, Tiavancore and Cochin, Bengal, Western India, Punjab and Sind and the Central Provinces and Rajputana. The names are in order of seniority. Work was begun in what are now called the United Provinces and Rajputana. vinces in 1813, in Bombay in 1820, in the Punjab in 1851, and in the Central Provinces in 1854. The Society has always kept Evangelistic work well to the fore; but it also has important medical missions, especially on the N.-W. Frontier, and many schools of the Primary, Middle and High standards. The Church of England Zenana Missionary Society is an offshoot of the C. M. S. controlling the work of 162 missionary ladies. The number of ordained European missionaries of the C. M. S. 111 India and Ceylon is 160, European laymen 30 and European laywomen 258. The Society claims a Christian community of 2,21,359 of whom 63,655 are

Reunion.—For very many years Indian Statistics of the work of this Society are not Christians have shown that they folt much easily ascertained, as much of it is done through

entirely controlled by the Diocesan authorities | the Scottish Episcopal Church at Nagpur, the The best known of the S. P. G. missions is that Dublin University Mission at Hazaribagh, and at Delhi, commonly called the Cambridge the Mission of the Church of England in Canada Mission to Delhi, carrying on educational work working at Kangra and Palampur (Punjab) at St. Stephen's College and School. At the should also be mentioned under the head of College there are about 200 students under Anglican Missions.

Instruction, and at the High School 800. The College heads at the High School 800. The College hostels accommodate 100 students. Missions to the depressed classes exist in Burma, in the Ahmednagar District and in several parts of South India, especially in the Diocess of Tinnevelly-Madura The S. P. G. also maintains an important Criminal Tribes Settlement of Hulli is the Declara Cartin. Settlement at Hubli, in the Bombay Carnatic. There are 116,000 Indian Christians under the aegis of the S. P. G.: 90 ordained European missionaries and 98 European lady workers.

Other Anglican Societies .- The Oxford Mission to Calcutta was started in 1880 Burma is 11, Doctors 4, European laymen 11 It works in the poorest parts of Calcutta and also at Barisal. There are 11 mission Indugenous workers including 3 Doctors. Stapriests of this Society, and 16 Sisters. In latitude of the Christian community from all addition to its work amongst the poor, the Calcutta are not available. Oxford Mission addresses itself to the educated classes in Bengal and issues a periodical called Epiphany, which is known all over India.

The Society of St. John the Evangelist (commonly known as the Cowley Fathers) has houseat Bombay and Poona, and small stations in the Bombay Konkan. In Bombay its missionary work centres upon the Church of Holy Cross three-fold vows of poverty, chastity and obedi-Umarkhadi, where there is a school and a ence and by living together to develop the Reli-dispensary. The Christians are chiefly drawn gious life along lines peculiarly suited to India UMARKINGH, WHERE THERE IS A SCHOOL AND SIGNED THE RELIGIOUS HERE ALL STATES ASSOCIATION OF LABORS ASSOCIATION community) in the Punjab. The mission of of life and growth.

The Bible Churchmen's Missionary Society carries on work in India in three missions—the Central Provinces, the United Provinces, and Burma Work was begun in all of these Pro-vinces in 1924 The work of the Society is primarily Evangelistic and this work is carried on by means of Hospitals, Dispensaries, Schools and Camps The Society has 17 principal Stations of which 5 have Hospitals and 7 Schools, the latter including the School for the Deaf in Rangoon The number of Ordained European missionaries of the B C M S. in India and Burma is 11, Doctors 4, European laymen 11

An interesting development has lately taken place in the Anglican communion. In 1922 the foundations were laid of a new Religious community called the Christa Seva Sangh or the Society of the Servants of Christ. The aim of its members is to enable Indians and Europeans to live together a common life based upon the

THE ROMAN CATHOLIC CHURCH.

With regard to numbers, the Catholic Directory of India gives the following tables:-

and the same of th	i	1911	1921	1935
1. British India and India States— (a) Latin Rite	in .	1,614,620	1,851,408	2,142,980
(b) Syriac Rites		364,660	440,488	669,234
2. French India		25,918	25,480	27,401
3 Portuguese India		296,148	288,741	590,990
Total, India		2,301,346	2,606,117	3,430,605
4. Ceylon		322,163	353,986	423,973
Total, India and Ceylon	ı	2,623,509	2,970,103	3,854,578

Note (1):—In 1860, the total for India and Ceylon was 1,170,854. In 1880 it had risen to 1,610,265 and in 1900 to 2,201,674.

NOTE (2):—In 1860 there were 1,504 priests. In 1921 there were 3,158. In 1931 there were $^{\circ}_{1}$,625, and in 1935 there were 4,438.

- The Catholic community as thus existing is composed of the following elements:—
 - (1) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas, They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicar-Apostolics. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syriac rite.
 - (2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.
 - (3) European immigrants at all times, including British troops.
 - (4) Modern converts from Hinduism and
 - (5) Recent converts from the Jacobite community in Malabar, of which 2 Bishops, 7i priests and some 28,000 laity have been received into the Catholic Church.
- The Portuguese mission enterprise, starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation de propaganda fids, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "Padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886 (amended by the Agreement of 1622, abolishing "double jurisdiction"). At the same time the whole country was placed under a regular hierarchy, which after rubsequent adjustments now stands as follows:—
- Under the Sacred Congregation of Extraordinary Ecclesiastical Affairs:—
 - The archbishopric of Goa and Damaun (having some extension into British territory) with auffragan bishoprics at Cochin and Mylapore (both in British territory)
- Under the Sacred Congregation of Oriental Churches: —
- The archbishopric of Ernakulam, with suffragan bishoprics of Changanacherry, Kottayam and Trichur.
- The archbishopric of Trivandrum, with suffragan bishopric of Tiruvella.
- Under the Sacred Congregation of Propaganda Fide:—
 - The archbishopric of Agra, with suffragan bishoprics of Allahabad and Ajmere.
 - The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore, Cahcut, Trichinopoly and Tuticorin, and the Missions of Ahmedabad and Karachi.

- The archbishopric of Calcutta, with suffragan bishoprics of Ranchi, Dacca, Chittagong, Krishnagar, Dinajpur, Patna and Shillong and the Prefecture Apostolic of Sikkim.
- The archbishopric of Madras, with suffragan bishoprics of Nellore, Hyderabad, Vizagapatam and Nagpur, the Prefecture-Apostolic of Jubbulpore, and the Missions of Cuttack, Bezwida and Bellary
- The archbishopric of Pondicherry (French), with suffragan bishoprics of Mysore, Combatore, Kumbakonam, Salem and Malacca,
- The archbishopric of Simia, with suffragan bishopric of Lahore and the Prefecture-Apostolic of Kashmere.
- The archbishopric of Verapoly, with suffragan bishoprics of Quilon, Kottar and Vijayapuram.
- The archbishopric of Colombo (Ceylon), with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.
 - Three Vicariates Apostolic and one Prefecture Apostolic of Burma.
- The European clergy engaged in India almost all belong to religious orders, congregation or mission seminaries, and in the great majority are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number over 2,000 besides which there is a body of secular clergy mostly Indian, etc, numbering about 2,400, and probably about 2,000 nuns. The first work of the clergy is parochial ministration to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people; their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, ('alcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College, Madras, teaching university courses; besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under equestion and railed girls, in 1904 to 143,051 boys and 73,164 girls, later figures being unavailable. As to missionary work proper, the country is covered with numerous modern mission centres, among which those in the Punjab, Chota-Nagpur, Krishnagar, Gujerat, the Ahmednager district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplaincies are derived mainly from Europe, that is, from the collections of the Society for the Pro-

pagation of the Paith and of the Holy Childhood, helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism, except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Archbishop Kierkels, D D., appointed in 1931.

THE CHURCH OF SCOTLAND.

The Church of Scotland and the United tran community now numbers over 14,000. Free Church have become one The Union, Work commenced in Darjeeling in 1870 is effected in October 1929, has already exerted now carried on throughout the whole a profound influence upon the life of the Church of Scotland in India. The Chaplaincy a Christian community there is Church of Scotland of Scotland dates from \$8,000. In the five mission districts of or in Scotland organised a congregation of his Scotlash fellow countrymen. The Calcutta, the Eastern Himalayas, Madras, of his Scotlash fellow countrymen. The Cristians of 1919 over 24,787 battlead Indian Christians of the Churches in the three thanks of 1919 over 24,787 battlead Indian Christians. In connection with these missions 1914: Bombay, 1919; Madras, 1921. Since 1903 there have been eighteen chaplains on the sad zenana work, having in India 41 European missionaries; 163 teachers, over 50 schools, staff, of whom nine belong to the Bengal Presidency, five to Bombay, and four to Madras. These minister both to the Scottish troops and to the civil population of the towns where they are stationed, but when there is a Scottish regiment the chaplain is attached to the regiment, instead of being posted to the station where the regiment happens to be placed and as a rule moves with the regiment There and as a rule moves with the regiment are three Presidency senior Chaplains in charge of Bengal, Bombay, and Madras respectively. There are churches in the chief towns of the Presidencies, and churches have also been Prosidencies, and churches have also been built, in all considerable military stations, e.g., Chakrata, Lucknow, Peshawar, Ranikhet, Rawalpindi, Sialkot, Umballa and Jubbulpore. In addition to the regular establishment there are a number of acting Chaplains sent out by the Colonial Committee of the Church of Scotland, and these are serving in such stations as Rawaipindi, Lahore, Cawnpore, Meerut, Mhow and Quetta The Additional Clergy Societies in India contribute towards the cost of this additional establishment. In other places such as Sialkot, Murree, Dalhousie, and Darjeeling, regular services are provided by Scottish Missionaries. Simla has a minister of its own sent out from Scotland.

dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was ent to Calcutta. He was the first to open Free Church schools where English was made the medium for instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. Educational work is still an import-Madras. Educational work is still an important branch of the mission work of the Church, but the Bombay College was closed in 1819 and in 1907 the College in Calcutta was united with the College of the United Free Church with five stations; the Santal Parganas, of Scotland, to form the Scottish Churches College. In the Punjab Evangelistic work Scotland, to form the Scottish Churches College. In the Punjab Evangelistic work Scotland, to form the Scottish Churches College, In the Punjab Evangelistic work Scotland, to form the Scottish Churches Chiral Provinces (Madras City, Chingleput, Sriperumbudur and Conseventeen missionaries. The baptised Chrisipier Churches

missionaries; 163 teachers, over 50 schools, three hospitals and six dispensaries.

three hospitals and six dispensaries.

The Church of Scotland has also done much to provide education for European children in India, Its two Churches in Bombay have six representatives on the governing body of the Anglo-Scottish Education Society, and the two churches exercise pastoral supervision over the Bombay Scottish Orphanage. In Bangalore there is the St. Andrew's High School, and both in Bangalore and in Madras the local congregation supports the School for poor children. The Ayrclieff Girls' Boarding and High School is under the care of the Kirk-Session of St. Andrew's Church, Simila the care of the Kirk-Session of St. Andrew's Church, Simila The now well-known St. Andrew's Colonial Homes at Kalimpong, Bengal, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are down, magnificent work munity, and are doing magnificent work. There are now twenty cottages, and about 600 children in residence. Further information may be found in "Reports of the Schemes of the Church of Scotland," Blackwood & Sons: "The Caurch of Scotland Year Book" and "The The Mission work of the Church of Scotland Handbook of the Church of Scotland in India

> Though the former Churches of the United Free Church now belong to the Church of Scotland they remain independent of the establishment recognised by Government. They have only three purely European congregations in India, two in Calcutta, and one in Bombay.

Bhandara, Wardha, putana, where th putana, where the extensive work stituted by the United Presbyterian Church centres.

The work falls into three main divisions, The work falls into three main divisions, made a large contribution to the work of higher evangelistic, medical, and educational. The education through four Christian Colleges. Christian community has been organised in the chief centres into congregations which form part of the Indian Presbyterian Church, which owes so much to the work of Dr. William and this Church is seeking to take an increasing share in the work of evangelism. There are representing several Missionary Societies. Other nineteen Mission Hospitals, among which are Colleges are Wilson College, Bombay, and four excellently equipped and staffed Women's Hislop College, Nagpur,

the extensive work in Jaipur. From the days of Duff in Calcutta United Presbyterian Church and Wilson in Bombay the Mission has given a prominent place to education. It has many schools in all parts of its field and it has also made a large contribution to the work of higher education through four Christian Colleges. The Scottish Churches College, Calcutta, is well known The Madras Christian College,

BAPTIST SOCIETIES.

THE BAPTIST MISSIONARY SOCIETY OF GREAT

There are 9 or 10 purely English Baptist BRITAIN.—Formed in 1792, largely through the Churches connected with the Society, but efforts of Dr. Wm. Carcy, operates mainly in English services are carried on in many of the Bengal, Bihar and Orissa, the United Provinces, stations Medical work connected with the the Punjab and Ceylon. The Baptist Zenana Society is carried on in 7 Hospitals, and 12 Dramission and the Bible Translation Society have pensaries. Two large Printing Presses for both been united Mission in India and Ceylon numbers Calciutta and Outtack. The Secretary of the 206 missionaries and about 978 Indian and Mission is the Rev D, Scott Wells, 44, Lower Sturpheles workers. 206 missionaries and about 978 Indian and Mission is the Rev D. Scott Wells, 44, Lower Singhalese workers. Connected with the Society Circular Road, Calcutta.

are 376 Indian and Singhalese Churches, 299 Primary Day Schools, 20 Middle and High Schools, and 1 Theological Training College.

The Headquarters of the Mission are at 19, Furnival Street, Holborn, London. The Church membership at the close of 1933 amounted to £172,034 of which £90690 was stood at 23,245 and the Christian community of the past ten years has linerased by about 53 per cent. The Canadian Parlier Mission.—Was commenced in 1873, and is located in the Telugu same period. Amongst the non-caste people great Country to the north of Madras, in the progress has been made in recent years, and is stans, Godavari, Vizagapatam and Ganjam years has increased by about 53 per cent. In the menced in 1873, and is located in the Telugu same period. Amongst the non-caste people great Country to the north of Madras, in the progress has been made in recent years, and sistence. Statement of the Churches formed from amongst. There are 22 statems and 632 out. these peoples are self-supporting.

The Women's Department is responsible for a very extensive Medical Work and have 15 Hospitals and 16 Dispensaries with 12,695

THE METHODIST EPISOPAL CHURCH 18the organization in the United States of America which grew out of the Wesleyan revival in England and her American colonies during the latter part of the eighteenth century. This Church began its work in India in 1856, at first confining its activities to what is now the United Provinces. From that centre it spread until the outposts of its work were found in Baluchistan, Burma, Malaysia, Netherlands Indies and the Philippine Islands. In 1920 a rearrangement of the mission field of the Church separated India, Burma and Baluchistan into what is now known as the Southern Asia division Within this present field the Church now has a total baptized Christian ommunity of 525,668.

The major task of the Church has been the uplitt of the depressed classes, and its work has been largely among that class. As a matter of fact, however, it has large numbers who came from the Mohammedans and the caste Hindus, and among such its influence is extend-

ing.

The educational work of the Church is extensive, it having in this area a total of 1,100 schools of all grades, including three colleges, twenty-two high schools, and numerous normal training and theological institutions. The registered attendants in these schools number 40,000

Special effort is madel or the instruction and development of the young people of the Church, there now being 336 chapters of the Epwo th League with 13,394 enrolled members, and 4,021 organized Sunday Schools with an enrolment of 139,422

The publishing interests of the Church are represented by the Lucknow Publishing House at Lucknow doing work in English, Urdu, Hindi and other Vernaculars. The periodicals issued cover the interests of both the evangelistic and the educational field, the Indian Witness, the Junior Methodist and Christian Education being in English, while the Kaukab-i-Hind, and other periodicals are issued in several of the vernaculars.

The governing body of the Church is the General Conferences held quadrennially in America in which the eleven conferences now existing in India are represented by twenty-four delegates. The policy of the Church in India looks forward to complete independence under the general governing body, there at present being but about two hundred American men and women as compared to 600 ordained and 4,000 unordained Indian and Burmese workers. At present the area is divided into seventy-two districts each in charge of a superintendent and among whom are many Indians. The work is supervised by three Bishops, elected by the General Conference, an I resident as follows: Bishop John W. Lobinson, Delhi: Bishop Brenton T. Badley, Bombay and Bishop Jashwant Rao Chitambar, Jubbulpore.

THE SALVATION ARMY.

The work of the Salvation Army in India Castern and Ceylon was commenced in 1882 by the late Commissioner Booth-Tucker, and was for many years under his control, with Headquarters in India. For some time now, the areas occupied have been divided for administrative purposes into 6 Territories, each under a Territorial Commander; and one smaller Command.

Northern Territory, with Headquarters at Lahore.

Western Territory, with Headquarters at Bombay.

Madras and Telugu Territory, with Head-quarters at Madras.

Southern Territory, with Headquarters at Trivandrum, in Travancore State.

Ceylon Territory, with Headquarters Colombo.

Eastern Territory, with Headquarters at Calcutta

Burmah Command, with Headquarters at Rangoon.

The Commanders are directly responsible to the International Headquarters in London.

Northern Territory.—The area in this Territory is the Salvation Army work in the Punjab, Delhi and United Provinces. The Territory is controlled from Lahore.

Evangelistic work, especially among the "depressed classes," is extensively carried on, both in the Punjab and the U. P.

A number of Settlements for the reformation of "Criminal Tribes" are under the control of the Salvation Army in the United Provinces (where this important reformative work was

commenced), A special Settlement has also Territo been opened in the Andamans during the Colledge. last few years.

A land colony 2.000 acres in extent is in existence in the Multan District, where a popula-tion of 1,800 has been settled. The land will ultimately become the property of the holders.

Medical work is carried on in two Hospitals, one of which is in the Punjab and the other in the United Provinces; and also in one dispensary.

Other institutions include, Day and Boarding Schools, Weaving Schools, Agricultural Colonies, a Hospital for British Military Soldiers, and Civilians at Delhi.

Village centres at which the S. A .. 1,908 Works .. Officers and Employees 675 Social Institutions

Territorial Headquarters: Ferozepur Road. Lahore, Punjab.

Territorial Commander: Commissioner N. Muthiah.

Corp, 287; Outposts 485; Societies 473; Social Institutions 16.

Besides the distinctly evangelistic operations, there are established a large General Hospital-Emery Memorial, Anand—and several Dispensaries; 220 Day Schools, 4 Boarding Schools; a Home for Juvenile Criminals, Industrial and Rescue Home for Women, conditionally Released Phisoners' Home, the management of the Bombay Helpless Beggars' Camp, Weaving Schools, Factory for the making of Weaving, Warping and Reeling Machines, and a Land Colony having a population of about 375 Salvationists.

Territory.-This Madras and Telugu Territory comprises the city of Madras and work situated in the Nellore, Guntur, Kistna and West Godavari Districts of the Northern Circars of the Madras Presidency.

There are the following agencies at work, viz., places in which work is systematically done, both evangelical and education and social:-307 Corps and Outposts; 132 village primary schools; 1 Criminal Tribes Settlement; 2 institutions for the training of Officers; 1 Leper Colony at Bapatla taken over by us in 1928; 1 Hospital for women and children at Nidrobrulu,

Territorial Commander: Colonel Herbert B.

General Secretary: Brigadier Edward Walker.

The South India Territory.—The main portion of our work in the Southern (India) Territory is within the geographical boundaries of the Native State of Travancore, called in Malayalam Tiruvitamkur.

Travaneore is the most southern of the Indian States and occupies the south-west portion of the Indian Peninsula It is bounded on the north by the State of Cochin and the British District of Combatore The British District of Madura, of Combatore The British District of Madura, Ramnad and Tinnevelly constitute its eastern boundary and in the west and south he the Arabian sea and the Indian ocean. Travancore has an area of 7,625 square miles, its extreme length from north to south being 174 miles and its extreme width 75 miles The population of the State according to the last census is 5,095,973

Aggressive measures have carried our flag in the north, over into the Native State of Cochin and in the East into the British District of Tinnevelly. The Gospel is preached in English, Tamil and Malayalam.

Chief Secretary: Lt.-Colonel W. D. Pennick
Western Territory — The Western Territory tomprises Bombay, Gujarat, Panch Mahals and the Maharastra.

Territorial Headquarters The Salvation Army.
Morland Road, Byculla, Bombay.

Territorial Commander: Colonel Ginana
Dasen (Alfred H. Barnett).

The outstanding feature of our operations is the Evangelical or Field Work, which is divided into twelve Divisions with 513 Corps, 819 Outstanding feature of our operations is the Evangelical or Field Work, which is divided into twelve Divisions with 513 Corps, 819 Outstanding feature of our operations is the Evangelical or Field Work, which is divided into twelve Divisions with 513 Corps, 819 Outstanding feature of our operations is the Evangelical or Field Work, which is divided into twelve Divisions with 513 Corps, 819 Outstanding feature of our operations is the Evangelical or Field Work, which is divided into twelve Divisions with 513 Corps, 819 Outstanding feature of our operations is the Evangelical or Field Work, which is divided into twelve Divisions with 513 Corps, 819 Outstanding feature of our operations is the Evangelical or Field Work, which is divided into twelve Divisions with 512 Corps, 819 Outstanding feature of our operations is the Evangelical or Field Work, which is divided into twelve Divisions with 512 Corps, 819 Outstanding feature of our operations is the Evangelical or Field Work, which is divided into twelve Divisions with 512 Corps, 819 Outstanding feature of our operations is the Evangelical or Field Work, which is divided into twelve Divisions with 512 Corps, 819 Outstanding feature of our operations is the Evangelical or Field Work, which is divided into twelve Divisions with 512 Corps and 519 C That is to say whole families steeped in superstition, darkest heathenism and idol worship, renounce their old life with its bad ways, and come over to us. They attend our meetings, and under sound teaching, and by the Holy Ghost are led to Christ and Salvation In companies of ding Schools; ten, twenty, fifty and one-hundred at a time, Industrial and they come and are received under the Flag as conditionally New People It is a thrilling experience to witness such a ceremony. News reaches us that the Officers and Soldiers of one Corps visited a nearby village wher all the people were heathen. After the first Meeting fifty people decided to come over on the side of Christ. Every Sunday since a Soldier of the Corps has visited that place instructing these babes in Christ.

> Overcoming temptation is a safe test, revealing of the tempted one has entered into a real spintual experience. Our people do stand true to Christ even under severe persecu-tion. Unless you renounce your Christ I will not employ you or pay you the wages due said an employer to one of our Soldiers. 'Christ is more to me than wages' leplied the Soldier, and although pressed, hard on every side, he stood firm, and gives a radiant testimony, telling how by grace he conquered.

COPYRIGHT.

There is no provision of law in British India modifications of them in their applications for the registration of Copyright. Protection translations and musical compositions. In the for Copyright accrues under the Indian Copyright Act under which there is now no regis-tration of rights, but the printer has to supply copies of these works as stated in that Act and In the Printing Presses and Books Act XXV the first publication of the work. The proof 1867. The Indian Copyright Act made such visions of the Act as to mechanical instrumodifications in the Imperial Copyright Act ments for producing musical sounds were
of 1911 as appeare 1 to be desirable for adapting found unsuitable to Indian conditions. "The of 1911 as appeared to be desirable for adapting found unsuitable to Indian conditions. "The liss provisions to the circumstances of India. Imajority of Indian melodies," it was explained the Imperial Act of 1911 was brought into force in India by proclamation in the Gazette written in staff notation, except through the of India on October 30, 1912. Under s. 27 medium of the phonograph. It is impossible of that Act there is limited power for the legislature of British possessions to modify or author, and the melodies are subject to great add to the provisions of the Act inits application variety of notation and time. To meet these to the possession, and it is under this power conditions s. 5 of the Indian Act follows the that the Indian Act of 1914 was passed. The portions of the Imperial Act applicable to British are scheduled to the Indian Act. The combination of melody and harmony, or Act to which these provisions are scheduled either of them, printed, reduced to writing, makes some formal adaptations of them to Indian law and procedure, and some material dided.

case of works first published in British India the sole right to produce, reproduce, perform or publish a translation is, subject to an important proviso, to subsist only for ten years from the first publication of the work. The pro-

Laws and the Administration of Justice.

The indigenous law of India is personal and in 1908 and the Code of criminal Procedure divisible with reference to the two great classes in 1898. These Codes as amended from time to of the population, Hindu and Mahomedan. time are now in force. Both systems claim divine origin and are in extricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Act, 1856; and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Preare to a limited extent still in force in the Presidency Towns as applicable to Europeans while much of the old Hindu and Mahomedan law is everywhere personal to their native law is everywhere personal to that a series of fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated."

Codification.

Before the transfer of India to the Crown Hefore the transfer of India to the crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860 was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said
"The Indian penal code may be described as
the criminal law of England freed from all
technicalities and superfluities, systematically
arranged and modified in some few particulars
they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Indian Penal Code has from time to time been amended. The Code of Civil Procedure was remodelled Englishman holding the same office. This

Statute Law Revision.

In October, 1921, a committee was appointed under the presidency of the Hon. Mr. A. P. Muddiman, I.C.S., to deal with the question of statute law revision. The functions of the Committee are to prepare for the consideration of Government such measures of consolidation and clarification, as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue, and it is suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping, with such amendments therein as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution, increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of pro-cedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subsubjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also justices of the peace, and by judges of the Sessions Courts; but it was necessary in both cases that the magistrate or judge should himself be a European British subject. pean British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions." This decision, embodied in the distinctions." This decision, embodied in the Ilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884, its right of the law receivable force was a more discounted. by which the law previously in force was amended, cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains, but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an

for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans.....Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered." Since 1836 no distinctions of race have been recognised in the civil courts throughout India.

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—"That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals" As a result of the recommendations of the Racial Distinctions Committee the law on the subject was further modified, and by the Criminal Law Amendment Act XII of 1923 in place of the old Chapter XXXIII (sections 443-463) the new Chapter XXXIII (sections 443-449) with certain supplementary provisions were substituted This has in some measure reduced the differencebetween the trials of Europeans and of Indians under the Code.

The Federal Court

Under the Government of India Act, 1935, a Federal Court for India is to be established as being an essential element in a Federal Constitution. It is at once the interpreter and guardian of the Constitution and a tribinal for the determination of disputes between the constituent units of the Federation The Court is to consist of a Chief Justice of India and not more than six judges in the first instance. The judges are to be appointed by His Majesty and to hold office during good behaviour until they attain the age of 65. The Court is to 51 at Delhi or such other place or places as may be appointed The Federal Court shall have one exclusive original jurisdiction in any dispute between the Federation and the Federal units of the nature described in section 204 of the Act It has also appellate jurisdiction over any final decision of a High Court in British India or in Federal state in cases involving a substantial question of law as to the interpretation of this Act or any Order in Council made thereunder, as stated in secs, 205-20 of the Act Provision is made for an appeal to His Majesty in Council from any judgment of the Federal Court in certain specified cases.

High Courts.

High Courts of Judicature were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding do not bind the judge by their opinions; on the old supreme and Sudder Courts. More juries the opinion of the majority prevails if recently High Courts have been constituted for accepted by the presiding Judge. The Indian Patna and Rangoon as well. The Judges law allows considerable latitude of appeal.

provision however is subject to the condition are appointed by the Crown; they hold office that every European British subject brought during the pleasure of the Sovereign; at least one-third of their number are barristers, onethird are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for persons who have held cer-tain Judicial Offices in India or lawyers qualified in India The sixed proportion of Baruster and Civilian judges has now been abolished by Government of India Act 1935 Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India

> For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Sindh, N.W.F. Province and the Central Provinces and Berar the pinicipal legal tribunal is known as the Court of the Judicial Countries are the Alexandria and Countries. Commissioner Quite recently the Secretary of State for India has approved the proposal for the establishment of a High Court in the Central Provinces and Berar and Sindh, and a High Court has since January 1936 been established at Nagpur

> The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final, except in cases in which an appeal lies to His Majesty in Council and 18 heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them, in appeal to keen themselves. come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magis-trates. Every province, outside the Presi-dency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistants if need be. These stationary sessions courts take the place of the Euglish Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates; in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

But there is no Court of Criminal Appeal, and and Calcutta High Courts. Pleaders practise as the Judicial Committee of the Privy Council in the subordinate courts in accordance with has repeatedly disclaimed all Jurisdiction as a rules framed by the High Courts. Court of Criminal Appeal, there is no adequate machinery for appeal or revision available to persons convicted of serious and even capital offences and scntenced by the High Courts in their original or appellate Criminal Jurisdictions The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district: as District Judge he presides in its principal civil court of original jurisdiction, his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India The civil courts, below the grade of District Judge, are almost invariably presided over by Judge, are almost invariantly presided over of Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency Towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dissected the property of the Courts of pose of money suits up to Rs. 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the motusal similar powers were conferred on the District Courts by the Insolvence Act of 1002. Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elscwhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Court, Vakils and Attorneys (Solicitors) of High Courts, and Pleaders, Mukhtiars and revenuc agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified great importance, and the Council of Law who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England, 1874-1893. The other Provinces and States The rule that a solicitor must instruct counsel have series of reports issued under the authority prevails only on the original side of the Bombay either of the Judiciary or the State.

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is essisted by the Standing Counsel and the Government Solicitor. There are Advocates-General appointed by the Crown and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the Secretariat a Legal Remembrancer and an Assistant Legal Remembrancer, drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister); the United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate; the Punjab has a Legal Remembrancer, Government Advocate and a Junior Government Advocate; and Burma a Government Advocate, besides a Secretary to the Local Legislative Council. Under the Government of India Act 1935 is proposed to appoint an Advocate-General for each of the more important provinces.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of the Court.

Law Reports.

The Indian Law Reports are now published in seven series—Calcutta, Madras, Bombay, Patna, Lahore and Allahabad, the authority of the Governorunder General-in-Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their

THE INDIAN POLICE.

Origins.—Cornwallis was the first Indian administrator to take the burden of policing the country off the zemindars and to place it on Government. He ordered the District Judges of Bengal in 1793 to open a Thana (Police Station) for every 400 square miles of their jurisdiction, and to appoint atlpendiary Thanadars (Police Station Officers) and subordinates.

In Madras in 1816, Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control. In this way the Revenue Department controlled the police of the districts and still to some extent does so, especially in Bombay Presidency.

In Khandesh from 1826-36 Outram of Mutiny fame showed how a whole time military commandant could turn incorrigible marauders into excellent police; and Sir George Clerk, Governor of Bombay in 1848, applied the lesson by appointing full-time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1853 which showed that 3 Collectors had no time for real police superintendence; in 1859 the principle of full-time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Mutiny led to general police overhaul and retrenchment and the Madras Act was mainly followed in India Act V of 1861, "An Act for the Regulation of Police", which still governs police working everywhere in India except Madras and Bombay, which has its own Police Act (IV of 1890).

Working.—Strictly speaking there is no Indian Police. With the doubtful exceptions of the Delin Imperial Arca Police, and the advisory staff of the Intelligence Bureau attached to the Home Department, the Government of India has not a single police officer directly under its control. The police provided for by the 1861 Act is a provincialised police, administered by the Local Government concerned, subject only "to the general control" of the Governor-General.

within the Local Government area the police are enrolled and organised in District forces, at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary; and Police Station Officers may also be dismissed by the D.S.P.

The D. S. P. is subject to dual control. The force he commands is placed at the disposal of the District Magistrate for the enforcement of lawand the maintenance of order in the District. But the departmental working and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector-General of Police, Inspector-General of Police, and Home Department. Generally speaking, the D. S. P. has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C. I. D.—The Curzon Police Commission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers, and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as Crimina) Investigation Departments and work under a Deputy Inspector-General. They collate information about crime, edit the Crime Gazette, take over from the District Police crimes with ramifications into several jurisdictions, and they control the working of such scientific police developments as the Finger Print Identification Bureaux.

Headquarters and Armed Police.—At the chief town of each District the D. S. P. has his office and also his Headquarter Police Lincs and parade ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accourtements. Here are the Stores and the Armoury. Here also constability recruits enlisted by the D. S. P. are taught drill, deportment, and duties and are turned out to fill vacancies. The Headquarter Lines also contain the two hundred or so armed police who mount guard on Treasuries in the District, and also provide prisoner and treasure escort. Actually they form a small and mobile local army equipped with muskets (single loading) and bayonets. The most highly trained section of them go through a musketry course and are armed with 303 service rifles. At most head-quarters, but by no means all, there is also a reserve of mounted and armed police.

Thanas and Thanadars —Almost throughout India the popular terms for Police Station and Police Station officer are "Thana" and "Thanadar." It is at the Police Station that the public are most in touch with the police and the police with the public. Whether it be in a large city or in a mofusal hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such callers, the Thanadar, who like police of all ranks, is supposed to be always on duty, is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure, and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are "cognisable by the police." The fourteenth Chapter lays down that a cognisable complaint must then and there be recorded, visited, and investigated. A non-cognisable complaint is merely noted in a separate book and the complainanant is told to go to court.

Police Prosecutors.—The complainant in a cognisable case not only has his complaint recorded but investigated without payment of fee. If the Thanadar succeeds in establishing a prima facie case against the accused, the prosecution in court is conducted free of charge by a police prosecutor, who is generally a junior pleader, engaged by Government to conduct police cases in the lower courts, Cases committed

to the Sessions are conducted by the Public Prosecutor or one of his Assistants, and the reports of these officers and the comments of the judge are a means for the D.S.P. to know whether his Thanadars are doing their work properly.

Out Posts .- When the Police Commission of 1860 devised the plan of police that still holds the field, they laid down two criteria of the numbers required. One was one policeman per square mile; the other was one per thousand of population. In towns it is well enough to of population. have the available police concentrated at the police station. But in the mofussil the Thana is very often fifty miles distant from portions of its jurisdiction. It is in such cases profitable to detach a portion of the police station strength under a head constable to man an outpost where complaints can be received and investigation begun without the injured party having to undertake a long journey to the distant Thana The secret of good motussil police working in normal times is dispersion. A single policeman, however junior, represents the rule of law and is an agent of Government

Ωf Promotion -Ordinarily The Chain the constable may aspire to become a jamadar, or with ability and luck, a Police Station Officer or even Inspector The directly recruited matriculate who comes in through the Police Training School as a Thanadar may ordinarily become an Inspector or a Deputy Superintendent, or exceptionally a Superintendent The direct Deputy, an office reserved for Indians, has a good chance of becoming Superintendent, and perhaps Deputy Inspector-General The direct Assistant Superintendent, whether from England, or from India, is sure of a Superintendentship, and has chances of D. I. G after 25 years' service. The period of service for all ranks for full pension is thirty years, and if an officer dies in the process of earning full pension has pension dies with him and all his dependents get his provident fund.

and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector-General of Police and he deals direct with Government, just as the Presidency Magistrates deal directly with the High Court, The Criminal Procedure Code of India is supersedde frimma Procedure code of notals superseded in the Presidency Towns by special police Acts which prescribe police procedure. Justice in criminal cases in Presidency Towns is somewhat rough and ready, not only from this cause, but also because Presidency Magistrates can give upto six months or Rs. 200 fine summarily, ie., without formal record of proceedings; and if only whipping or fine up to Rs. 200 is inflicted there need be not even any statement of reasons for the conviction.

Round Figures -The process of reorganisation and retrenchment goes on ceaselessly, annual administration reports for the ten major provinces and four minor administrations appeared tardily, and there are no unified statistics for the police of India and Burma. The following figures are therefore merely to be regarded as approximations, giving a general idea of the numbers of police and the volume of work put through yearly—There are about 25,000 Military Police, chiefly in Burma, Assam, and Bengal, and these cost about one erore. The maintenance of them is a departure from the principles laid down by the 1860 Commission and the 1861 Act.

Provincial Police including Burma total about 200,000 and cost eleven and a half crores or an average of over one erore per major Province.

There are about 10,000 Thanas or Police Stations which annually investigate from five to six thousand murders, four thousand dacoities, twenty-five thousand cattle thefts, one hundred and seventy thousand ordinary thefts and as many burglaries. They place on trial every year about three-quarters of a million persons, of . whem about half a million or more are convicted. Presidency Police—In the Presidency The jail population of India, which is over a Towns there is unified police control for the hundred thousand, consists of many habituals Police Commissioner is responsible for both who ou release proceed to prey on the public law and order and for departmental training until such time as the police again secure their conviction and incarceration

STATISTICS OF POLICE WORK.

portance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high parison even for larger areas without taking nizable crime -

The undestrability of attaching undue im-into account the differences in the conditions under which the police work; and, it may be added, they can at the best indicate only very imperfectly the degree of success with which the police carry out that important branchof their duties, which consists in the prevention of crime. These considerations have been or crime. These considerations have been emphasized in recent orders of the Government of India. Subject to these observations, the figures below may be given as some indication of the volume of work falling upon depend upon his being able to show a high ment of india. Subject to these closervations, ratio of convictions, both to cases and by the figures below may be given as some persons arrested, and a low ratio of crime. Indication of the volume of work falling upon the objection applies more particularly to the the police, and of the wide differences between use of statistics for small areas; but they the conditions and the statistical results in cannot properly be used as a basis of comdifferent provinces. They are statistics of cog-

JAILS.

Jall administration in India is regulated to all India legislation. The obvious advisagenerally by the Prisons Act of 1894, and by rules assued under it by the Government of India and the local governments. The punishments authorised by the Indian Penul Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

The origin of all iail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India is extremely long, and reviews the whole question of jail organization and administration in the minutest detail. In most matters the Com-mission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a mmor character, their proposals have either been rejected ab unitio as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large central jails for convicts sentenced to more than one year's imprisonment; se-condly, district falls at the headquarters of districts; and, thirdly, subsidiary jails and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General; he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour A Press Note issued by the Bombay Govern-ment in October, 1915, says:—"The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

The Jails Committee.—Since the intro-

bility of proceeding along certain eneral lines of uniform application led lately to the appointment of a Jails' Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty gammistration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing existing jail accommodation, of recruiting a better class of warders; of providing education for prisoners, and of developing prison industries so as to meet the needs of the constitutions. suming Departments of Government. Other important recommendations included the separation of civil from cuminal offenders, the adoption of the English system of release on license in the case of adolescents, and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They system needed particular assencion. They recommended the segregation of habituals from ordinary prisoners, the provision of separate accommodation for prisoners under trial, the institution of the star-class system; and the abolition of certain practices which are hable to harden or degrade the prison popula-

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jall walls, but extra-mural employment on a large scale is sometimes allowed, as, for example, when a large times anowed, as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian iail.

The conduct of convicts in fall is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence, In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major duction of the reformed constitution the mainte-nance of the Indian Prisons falls within the blems is the internal maintenance of order sphere of provincial Governments and is subject among the prisoners, for which purpose paid

warders and convict warders are employed. Indian Year Book, 1922 (pages 670-671). With this is bound up the question of a special class of well-behaved prisoners which was tried from 1905 onwards in the Thana Jail.

Juvenile Prisoners.—As regards "youthful offenders"—i.e., those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a wise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit; and whipping by way of school discipline.

The question of the treatment of "young adult" prisoners has in recent years received adult" prisoners has in recent years received much attention. Under the Prisons Act, pri-soners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habituals) who are over 15, and therefore incligible for admission to the reformatory school, has led Local Governments to consider schemes tor going beyond this by treating young adults on the lines followed at Borstal, and considerable progress has been made in this direction. In 1905, a special class for selected juveniles and voung adults was established at the Dharwar pail in Bombay; in 1908 a special juvenile jail was opened at Alipore in Bengal; in 1909 the Mciktila jail in Burma and the Tanjore iail in Madras were set aside for adolescents, and a new jail for juvenile and "juvenile adult" convicts was opened at Bareilly in the United Provinces; and in 1910 it was decided to concentrate adolescents in the Punjab at the lahore District fail, which is now worked on Borstal lines. Other measures had previously been taken in some cases; a special reformatory system for "juvenile adults" had, for example, been in force in two central jails in the Punjab since the early years of the decade, and "Borstal enclosures" had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the formation of Prisoners' Aid Societies except in Bombay and Calcutta, though even in those others much remains to be done

Reformatory Schools.—These schools have been administered since 1899 by the Edu-ation department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Transportation.—Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time 15 Port Blair in the Andaman Islands.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with Special reference to recent legislation and expenses in Western countries. Its report, led lished in 1921, was summarised in the provision of a reasonable degree of economic

number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences.—The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Sessions Judge and a non-offi ial. In all cases, the release of a priconer on paiole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—The future of the penal settlement of Port Blair was continually under the consideration of the Government of India from the time of the publication of the Jails Commission report, but it was not till 1926 that a definite decision was reached It was then decided that henceforth only those convicts should normally be sent to the Andamans who volunteered to come, that the old restrictions on life in the settlement should be sensibly relaxed, that convicts should be encouraged to settle on the land, that in certain conditions they should be entitled to release to obtain occupancy rights over the land which they had cultivated, and that the importation of wives and families should be encouraged. The object of these changes was to promote the development of a free colony of persons, who would, after the terms of then sentences had expired, make the Andamans then permanent home. The effect up to date has been to introduce a completely new outlook on life into the settlement, but it is still too soon to appreciate its potentialities. It has recently been found necessary to send to the Andamans certain convicts either sentenced to transportation for life or to long terms of rigorous imprisonment for permanent incarceration in the Cellular Jail Such prisoners will not be released and allowed to go into the settlement, and its development will in no way be affected by their presence.

comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first as- private agency for the control of settlements.

certaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and

The variations of the jail population in British India during the five years ending 1933 are shown in the following table:-

The total daily average population for 1933 was 133,750, the total offences dealt with by criminal courts was 227, and by Superintendents 126,719. The corresponding figures for 1932 were 144,004, 310 and 147,736, respectively.

The total number of corporal punishments increased from 190 to 267. The total number of cases in which penal diet (with and without cellular confinement) was prescribed was 4,153 as compared with 4,669 in the preceding year.

expenditure Total decreased from Rs. 1,77,91,718 to Rs. 1,70,37,505 and total from Rs. 24,01,285 to there was consequently a earnings cash Rs. 20,16,245; there was consequently a decrease of Rs. 3,69,173 in the net cost to Government.

The death rate increased from 10·19 per mille in 1932 to 10·80 in 1933. The admissions to hospital were lower, and the ratio of daily average number of sick per mille of average strength fell from 23·12 to 21·57.

The Laws of 1935

RATANLAL RANCHHODDAS, Advocate, High Court, Bombay.

AND

MANHAR R. VAKIL. Barrister-at-Law.

- Nations in 1930 Under section 2 a married woman whose husband acquires British Indian Nationality during marriage can acquire such nationality if within a certain period she makes a declaration to the Local Government of her desire to do so S 4 protects such a woman from desire to do so suprocess such a voluntary and loss of British Indian Nationality as a consequence of the loss of such nationality by her husband unless by reason of the acquisition of a new nationality she also has acquired that nationality
- 2. The Indian Tariff (Amendment) Act— his Act reduces the import duty on wheat This from Rs. 2 to Rc 1-8-0 per cwt and restores the former equality in the levels of the duties on wheat and wheat flour An import duty at the rate of twelve annas per maund of 82 2/7 lbs avoirdupois is imposed on imports of broken rice of foreign origin
- 3. The Indian Tea Cess (Amendment) Act—This Act raises the maximum rate of the cess levied on exports of tea from India by sea from annas eight per hundred pounds to annas twelve per hundred pounds.
- 4. The Salt Additional Import Duty (Extending) Act —This Act extends the life of the Salt (Additional Import Duty) Act, 1931, for a further period of twelve months.
- 5. The Indian Mines (Amendment) Act—Following recommendations made by the Select Committee of the Legislative Assembly on the Indian Mines (Amendment) Bill of 1928 and by the Royal Commission on Labour, both Houses of the Legislature, in dealing with a Draft Convention relating to hours in coal mines, adopted in 1932, a resolution recommending the examination of the possibility of reducing the statutory limits of hours in mines In pursuance of this resolution, the question was examined by the Government of India in consultation with the Local Governments and the interests concerned The present Act reduces the statutory limits of hours in mines. S. 2 raises the minimum age for employment in a mine from 13 to 15 years 4 provides for the maintenance of statistics of minor accidents. Under s 6 the hours of work above ground are reduced to 54 hours weekly and 10 hours daily and the hours of work below ground are reduced to 9 hours daily

1. The Indian Naturalization (Amendment) of Rs 1,000 or upwards but less than Rs 2,000; Act—This Act relates to the national status of married women and gives effect to the tax; reduces the import and excise duties on Articles of a Convention on matters relating to silver; and abolishes the export duty on raw the Conflict of Nationality Laws which was skins, S 2 and 4 provide for the continuance concluded under the auspices of the League of for a further period of one year of the existing provisions regarding salt duty and inland postage rates The duty of Rs 1-4-0 per maund on salt remains liable to the additional duty imposed under 8 5 of the Indian Finance (Supplementary and Extending) Act, 1931 8 3 provides for the reduction of the import duty on silver from five annas per ounce to two annas per ounce and for the abolition of the export duty on raw skins. S 5 continues for a further period of one year of the existing rates of income-tax and super-tax with the following alterations —(a) The rate of income-tax when the total income is is reduced from two pies to 1½ pies; (b) The rate of income-tax when the total income is Rs 1,500 or upwards, but less than Rs 2,000 is reduced from four pies to 23 pies; and (c) the surcharges on income-tax and super-tax are reduced from one-fourth to one-sixth S 6 provides for the reduction of the excise duty on silver corresponding to the reduction in import duty.

- 6 The Aligarh Muslim University (Amendment) Act—Ubder s 16 of the Aligarh Muslim University Act, 1920, the appointment of a Pro-Vice-Chancellor is obligatory. The present amendment to the original Act makes the appointment of a Pro-Vice-Chancellor permissive and not obligatory
- 7. The Indian Army (Amendment) Act.—S. 50 of the Indian Army Act, 1911, sets out all the penal deductions which may be made from the pay and allowances of a person subject to the Act, but sub-s (2) thereof makes no reference to the forfeiture of such pay as corps or working pay which can be awarded as a minor punishment by an officer exercising authority under s. 20 S 2 of the present Act rectifies this omission and omits from s 50 the reference to suspension from pay, which owing to the deletion of clause (e) of s. 43 by the Indian Army (Amendment) Act, 1934, is no longer a punishment which can be awarded by a Court-martial S 3, by amending s. 73 of the original Act, empowers District Court-martial to award a warrant officer the sentences of forfeiture of seniority of rank, reprimand and severe reprimand on the analogy of s. 182 of the Army Act (44 & 45 vict c. 58). S. 103 A of the original Act empowers the Governor-General in Council to order the detention of persons who, when brought to trial The Indian Finance Act.—The Act continues by a Court-martial, are found to be of unsound a further period of one year certain duties mind and therefore incapable of making their nd taxes imposed under the Indian Finance defence, or are found to be "guilty but insane." or, 1934; reduces the income-tax on incomes S. 4 of this Act provides for the release of such

on a certificate from any of the authorities em- commencement of the present validating Act powered to grant a certificate under s 473 of

application of a relative or friend
8. The Central Provinces Court Supplementary Act. -This Act makes certain necessary amendments of a formal nature in the fol-

The Provincial Small Cause Courts (Amendment) Act. - This act removes certain doubts which have arisen in the interpretation of the proviso to sub-s (1) of s 17 of the Provincial Small Cause Courts Act, 1887, by making it be made and decided before the substantive application for the order to set aside the decree, and that it is always open to the applicant to adopt the alternative course of depositing the total decretal amount

10. The Provincial Insolvency (Amendment)
Act. There is judicial authority for the proposition that a composition under 8 39 of the Provincial Insolvency Act, 1920, releases the insolvent only from debts entered in the schedule, but not from a debt in respect of which the creditor has not taken part in the insolvency proceedings, whereas s 30 of the Presidency. Towns Insolvency Act, 1909, releases the insolvent from all debts probable in Insolvency. This Act assimilates the terms of s 39 of the former act to those of s 30 of the latter act.

11. The Factories (Amendment) Act. -The Pactories Act, 1934, probabits, save in very exceptional circumstances, the employment of women during the night hours; but women managers or supervisors or women employed in confidential capa ities may be exempted by title from this prolibition. The present Act removes this power of exemption and brings the law into line with the International Labour Conventions relating to the employment of women during the night

12. The Repealing and Amending Act. - This Act makes necessary amendments of a tormal nature in certain enactments and repeals certain immedesary and spent enactments

13 The Jubbulpore and Chhattisgarh Divisions (Divorce Proceedings Validation) Act. Within the Jubbilpore and Chhatisgarh Divisions in the Central Provinces, the prisdiction of a High Court under the Indian Divorce Act, 1869, was, by the Government of India, Home Department, Notification dated September 1, 1923, and by sub-s (2) of s 2 of the Criminal Law Amendment Act, 1923, transferred from the Allahabad High Court to the Court of the Judicial Commissioner of the Central Provinces The Allahabad High Court has, in point of fact, continued to exercise this jurisdiction in the Commutee, by notification in the Cazette of these divisions up to the present. This Act. India, make rules to carry out the purposes of reaffirms the jurisdiction of the Court of the this Act. S. 13 authorises the Commutee, with

persons on the report of a Medical Officer or | during the period from that date up to the

14. The Indian Coffee Cess the Code of Criminal Procedure, 1898, or on the coffee growing interests in South India pressed upon the Government of India the desirability of imposing a ce-s on exports of coffee with a view to providing funds for the improvement and development of the Indian coffee industry ment of the High Court of Judicature at from Bittish India a cess to provide for the Nagam. The Indian Divotce Act, 1869. The Central Provinces Laws Act 1875. The Code of Chunnal Procedure, 1898. The Indian Stamp Act, 1899. Burma from the operation of this Activities of 1926. the approaching separation of Burma from India. S 3 provides for the imposition of coffee cess on all coffee produced in India and taken by sea or, by land to any place beyond the limits of British India or to Burma at the rate of one rupee per hundred weight S 4 empowers the clear that the preliminary application to as Governor General in Council to constitute a certain what security will satisfy the Court must Connected, known as the Ludian Coffee Ces be under and decided before the substantial Committee, consisting of the following members to receive and expend the proceeds of the coffee cess —(1) five persons representing respectively the agricultural departments of the Local Governments of Madras and Coorg and of the Governments of the States of Mysore, Travancore and Cochin, (2) eleven persons representing the coffee growing industry, namely, three persons nominated by the Government of the Mysore State, two persons nominated by the Local Governments of Madras and Coorg, respectively, three persons nominated by the United Planters' Association of Southern India, and three persons nominated by the Coffee Growers Association, (3) three persons representing trade interests nominated by the Governor General in Council, and (4) one person representing the Imperial Council of Agricultural Research nominated by the Gover-nor General in Council S 7 empowers the Committee to elect a Chairman from amongst its members and provides for the appointment of sub-commuttees and executive officers for the efficient performance of the duties imposed by this Act S 8 provides for the application of proceeds of coffee cess to meet the expenses of the Committee and the cost of measures as the Committee may consider advisable to undertake for promoting the sale and increasing the consumption in India and elsewhere of coffee produced in India and also for promoting agricultural and technological research in the interest of the conec industry in India. Under 9 the Central Board of Revenue constituted under the Central Board of Revenue Act, 1924, is authorised to make rules providing for (a) the refund of the coffee cess levied where coffee is exported by land and subsequently imported in India, and (b) the export by land, without payment of the coffee cess, of coffee which is subsequently to be imported into India | S | 11 empowers the Governor General in Council to dissolve the Committee Unders 12 the Governor General in Council may, after consulting Judicial Commissioner of the Central Provinces, the previous sanction of the Governor General as from September 1, 1923, and validates all in Council, to make bye-laws consistent with proceedings taken in the Allahabad High Court this Act and with the rules made thereunder.

India and the League of Nations.

India is a Founder-Member of the League of | She was treated as if she had attained to the Nations and enjoys in it equal rights with other Member-States, a position which she mainly owes to the goodwill shown towards her advancement and aspirations by Great Britain and the Self-Governing Dominions of the British Empire. The League of Nations was established under the terms of the Peace Treaty which was signed in Paris in 1919 after the conclusion of the Great War. Great Britain and the Self-Governing Dominions in 1917 passed a resolution which set India upon the road that led to the high international platform on which she stepped.

India was represented at the Imperial War India was represented at the Imperial was represented at the Imperial Conferences held in London in 1921, 1923, and 1926, and at the Imperial Economic Conference held in London in 1930. The report of the Inter-Imperial Relations Committee of the Imperial Conference, which was adopted by the Conference of 1926, stated the position of Great Britain and the Dominions to be "autonomous communities, equal in status, in no way subordinate to one another in any respect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations. India is not yet a Self-Governing Dominion to the extent indicated in this formula. The first stage in the direction of establishing The first stage in the direction of establishing Responsible Government in India was prescribed by the Government of India Act, 1919, but the Governor-General of India does not yet (to quote again from the Inter-Imperial Relations Committee) hold "in all essential respects the same position in relation to the administration of public affairs" in India as is held by His Majesty the King-Emperor in Great Britain. And there are certain other respects in which India's Constitutional position in the Empire is not the same as that in the Empire is not the same as that of the Self-Governing Dominions. India, for example, is not entitled to accredit a Minister Plenipotentiary to the Heads of Foreign States.

The position enjoyed by India in the Empire governed the position which she entered when, as one of the States of the Empire, she joined in the Paris Peace Negotlations in 1918-19 India's mombership of the League of Nations places her in a unique position among all non-self-governing States, Dominions, or Colonies throughout the world. She is an original member of the League by virtue of para 1 of article I of the Covenant by which the League was established and which states that any fully relf-governing State, Dominion or Colony not named in the Annexe may become a member of the League. She is the only original member which is not self-governing, and in virtue of the restriction under para 11 of article I, on the admission of members other than original members, she will, so long as the present constitution of the League endures, remain the only member which is not self-governing. As a nember of the League, India was for the first time brought into direct and formal contact.

same kind of separate nationhood as that enjoyed by the Dominions.

India's Attitude,

On questions coming before the League, India has exactly the same rights as any other Member-State. The Secretary of State for India in His Majesty's Government is ultimately responsible for the appointment of Indian delegates and for their instruction, but in practice, he and the Government of India act jointly in consultation and agreement with jointly in consultation and agreement with one another Partiy as a result of hor membership of the League and partly owing to resolution No. IX adopted by the Imperial War Conference in 1917, recommending inter also recognition of the right of the Dominions and of Tarks are adopted several Partitle Resource. of India to an adequate voice in British foreign policy and foreign relations, India has been given the same representation as the Dominions at all international conferences at which the British Empire is represented by a combined Empire Delegation. On many occasions in fact she has taken the lead in forming world opinion towards the achievement of the League's aims. In particular in the international Labour organisation she has been successful in bringing Empire policy into line with her own on more than one occasion. In many of those conferences, particularly those of the League, Indian delegations have taken an independent line of action, sometimes directly opposed to the attitude of other parts of the British Common wealth. One interesting case occurred in 1920 at the Genoa Maritime Conference when Indian delegates in the tace of opposition from the Empire managed to secure a mandate for special treatment for Indian sailors in British shipping although there was a concerted move from the Empire delegation to get Indian lascars driven off British ships.

India's New Status.

It will be observed that the situation created by India's stepping from the Imperial Conference into the Paris Peace Conference and League of Nations in the manner in which she did was in certain respects highly anomalous and one impossible to harmonize with her constitutional position as defined in the Government of India Act Nevertheless, as the Secretary of State, in a Memorandum presented to the Indian Statutory Commission by the India Office in 1929, showed, "It has been the deliberate object of the Secretary of State to make india's new status a reality for practical purposes within widest possible limits." It was not legally possible for the Secretary of State to relinquish his constitutional power of to restrict to reinquish his constitutional power of control, nor, consistently with responsibility to Parliament, could he delegate it: "But it has been his constant endeavour to restrict its exercise to a minimum, to keep even its onstitution of the League and or present the existence as far as possible in the background, only member which is not self-governing. As a nember of the League, India was for the first greatest possible freedom of action under the time brought into direct and formal contact influence of their Legislature and of public with the outside world as a separate entity.

There are available many illustrations of these principles being followed in practice. India is given scope to pursue in the League of Nations an independent line of action within very wide limits, even though, as has occurred In some instances, it brings her into conflict with His Majesty's Government. In 1925, for example, at the conference on Opium and Drugs India so acted that the British delegation had to obtain fresh instructions from H. M's Government which resulted in India settling the question of Indian hemp to her own liking the event of such conflict within those limits, the Secretary of State acts, if he acts at all, as head of the Government of India rather than as a member of His Majesty's Government. He does not use his power to impose on the Indian Delegation an artificial solidarity with British Delegates, but, rather, with the consent of his colleagues of His Majesty's Government, he stands aside and allows representatives of India the same freedom as Dominion Delegates would enjoy in controversy with the Delegates of Great Britain participated in all the Assemblies of the League, in the annual session of the International Labour Conference where because of her individual importance she plays a very predominant part, and in numerous Conferences on special subjects held under the auspices of the League as well as in some important non-

League, International Conferences, including the Washington Conference on Naval Armament in 1921, in Genoa Economic Conference in 1922, and the International Naval Conference in 1922, and the International Naval Conference held in London in 1930. India is also represented on several permanent League bodies, e. g., the governing body of the International labour office, the Advisory Committee on Opium and Drugs, the Economic Committee, the Health Committee and the Committee of Intellectual Co-operation. It is interesting to note that since 1921 Sir Atul Chatterjee has been acting as Deputy Commissioner of the Governing Body of the International Labour Office and this position was preliminary to his being elected Chairman in 1932.

The year 1932 saw the opening of a League of Nations Bureau in Bombay in response to the demands of successive delegations to Geneva Its purpose is to keep in touch with representative Indian opinion so that Geneva and India may be brought closer together. The Bureau is maintained by the League of Nations without any contribution by the Government of India.

In the Report of the Indian Delegation in 1933, a recommendation was made for the appointment of a permanent Indian Delegate at Geneva, but Government have not yet seen their way to adopt the suggestion

Labour in India.

GROWTH OF THE LABOUR PROBLEM.

India is and always has been a predominantly agricultural country and over sixty-five per cent of her working population are dependant on the soil for their principal means of irechhood Agriculture by itself, however, does not always afford, either to the agriculturist of to the agricultural labourer, the wherewithal for keeping body and soul together Much the greater part of the land is divided up into small holdings which are in the hands of cultivating owners or of cultivating tenants who work on the fields themselves with as many members of their families as are able to do so. Little outside labour is employed and then only during busy spells such as at transplanting and haivesting For the purely agricultural labourer, employment on the land is casual and spasmodic and, normally, the cash wages earned by him are remarkably low, for the contract of hiring often includes a inid-day meal Even for the members of the families of the cultivating owners and tenants, employment on the land is seldom perennial and is mostly seasonal. It is neces-sary, therefore, for both the smaller cultivators and the agricultural labourers to migrate frequently to the towns and cities in search of additional work in order to keep the wolf from the door, but, the inigration is generally always of a temporary character, and the agriculturist's contact with his land is seldom, if ever, permanently broken. It is this pool-cultivating owners and tenants, members of their families and the landless agricultural labourers—from which the manufacturing, transport, mining and other industries of India draw the bulk of the labour which they require. Unlike the West where large congregations of workpeople have been completely divorced from the land and are permanently settled in industrial towns and cities, the proportion of permanent town dwellers m India, as compared with the total population, is exceedingly small, and, as has already been pointed out above, the majority of Indian industrial workers return to and muintain their contact with the land. This point cannot be overemphasized because it is the most important factor for the proper appreciation and understanding of the several problems connected with Indian industrial labour.

It is no doubt true that in many instances it is the spirit of adventure or the lure of city life which draws the agriculturist from his land to the towns. In most cases, however, the migration is due to the efforts of the jobber or a recruiting agent to secure the labour which his employer requires. Many must be the stories that are told to the illiterate and ignorant peasant of the attractions of employment in city industries—stories the telling of which in almost

all cases is followed by severe disillusionmentbut still, where needs must the devil drives, and so the stream continues to flow The duration of the stay in a town or city would depend on the extent of the need for cash It may last only for a few weeks or it may extend to a few months In many cases, a member of an agriculturist's family may be required to work in a town or city for years in order to send home such remittances as he can from his meagre wages, but even then there are always frequent returns home either for some festive occasion such as a marriage or for partaking in the obseques and religious rites associated with a death in the family or for short spells of work on the soil during the busy season Such workers become semi-permanent town dwellers, and, as a result of the experience which they have gained, are able to secure employment in skilled jobs and to command higher wages and better conditions of work.

THE EARLIER FACTORY ACTS.

Up to almost the end of the nineteenth century there was no State control over conditions of employment in any industry in India. Employers were free to do what they liked with the result that Indian labour was exploited were inordinately excessive, rates of wages unduly low and other conditions of employment as bad as they possibly could be. There was no regulation of the age at which children could be employed, there were no periodical or weekly holidays, and there was no legislation to safe-guard factory workers from injury through accidents caused by entanglement with unfenced machinery in motion Employers thought only in terms of 1 s d, and forgetting the human factor in the labour which they employed considered their workpeople as a speechless and silent part of their factory plants to be worked to the limit of the endurance not of the workers but of the machinery. With the growth of factory the machinery With the growth of factory organisation in India and the rapid development of her industries, the minds of certain men, notably the late Mr Sorabjee Shapurjee Bengali, CIE, however, began to be awakened to the existence of evils which by the standards of to-day would be considered intolerable, and unceasing efforts at securing some improvement in conditions of work in factories resulted, notwithstanding strennous and universal opposition at the time from all employers, in the passing of the first Indian Factories Act of 1881 Act gave a limited measure of protection to children firstly, by prohibiting their employment in factories it they were under seven years

of age and also in two separate factories on the familiar with the conditions—nearly all men same day, secondly, by restricting their hours engaged in the management of factories—was of employment to nine per day; and thirdly, described by the Commission as 'a sad tale of of employment to nine per day; and thirdly, by requiring that they should be granted four holidays in a month and also rest intervals in accordance with rules to be framed by local governments The lower and upper age limits of "children" were fixed at seven and twelve respectively but the scope of the measure was greatly restricted by fixing the number of operatives necessary to constitute a factory at 100, by excluding from the operation of the Act those factories which did not work for more than four months in a year, and also by excluding all establishments which did not use mechanical power this last exclusion remaining absolute until 1922. The burden of proving that an employed person was over seven or twelve years of age as the case might be was placed on the person accused of employing any-one contrary to the law The Act contained no restrictions in connection with the employment of adult labour but provision was made for the fencing of such parts of machinery as would be dangerous it left unfenced and for the reporting of accidents. The appointment of inspectors and certifying surgeons was left to the discretion of local governments, and the work of inspec-tion, like most other duties at that time, was thrown at once on the district officers in all in legislation for the control of working condi-provinces. District officers had neither the tions in factories made it very difficult for tune uor the necessary technical knowledge for the adequate inspection of factories and it was not long before the 1881 Act became almost a dead letter in most provinces.

Early in 1882, the Coroner of Bombay reported an incident where a hoy of 15, after working 14 hours in a mill, including the whole night. was killed by being entangled in a cog-wheel Of all the provincial governments in India, the Government of Bombay has always taken a progressive lead in matters connected with labour, and, tollowing the Coroner of Bombay's report, the Bombay Government obtained the services of an English Inspector of Factories, Mr Meade King, for a period of six mouths to study and make a report on the working of the 1881 Act His recommendations included the alteration in the age limits of children from seven to 12 to eight to 13, the limitation of their hours of work to six per day, the restriction of the hours of work for females to day light; the creation of a "young persons" class to include all up to 16 and the limitation of their hours of labour; and the abolition of their nours of labour; and the abolition of the clause limiting the definition of "factories" to works employing at least 100 persons Mr. Meade King's report was followed up by a Factories Commission appointed by the Government of Bombay in 1884 to consider whether any further legislative measures were necessary. "The evidence taken by the Commission confirmed the view that conditions were worst in the smaller factories, and particularly in upcountry ginning factories Many of these factories employed less than 100 persons, and the clause excluding factories which did not work for more than four months had

great want on the one side and cruel cupidity on the other. Women were employed for long periods for 23 hours a day, two or three hours being the longest time for which they could be absent. They were kept at work continuously till they were exhausted (and they were said to die frequently as a result of overwork) and were then replaced by fresh women, if they could be found. In the busiest season the hands worked for several days and nights without stopping. There was no other work available, and the wage was 3 to 4 annas for a day of 16 hours with, at times, half an anna as bonus for longer hours. The factories were nearly all ill-ventilated, and they were covered by corrugated iron roofs in many cases, while the machinery was generally unfenced." The mentality of the time may be judged from the fact that the Commission with their professed desire to be 'moderate' in their findings, urged that in factories working for less than six months in a year, women and children should be employed daily for only 16 hours with two hours' rest!

The stout opposition put up by employers all over India at the time against further advance tions in factories made it very difficult for Government to proceed as expeditionally as they could have wished in the matter; but, at the same time, Government were not unmindful of the need for securing as much evidence as possible of prevailing conditions in order to complete their case for greater regulation. Large meetings of textile mill workers were organised in Bombay City by persons interested in Isbour welfare and memorials making for in labour welfare and memorials praying for better conditions of work in factories were submitted to Government. One such memorial submitted in 1884 demanded (1) a complete day of rest every Sunday, (2) a recess of half an hour, (3) the limitation of hours of work from 6-30 a m. to sunset, (4) compensation for injuries and disablement, and (5) the payment of wages not later than the 15th of the month following that in which they were earned It is significant that periods of forty and more than fifty years had to clapse before the fourth and the fifth of these very clementary demands of factory workers in India were granted by the State.

A landmark in the history of factory legislation in India was a memorandum on conditions of work in factories in the Bombay Presidency which was submitted to Her Majesty's Chief Inspector of Factories in England in 1886 by Mr. James Jones, an English Factory Inspector who was appointed by the Government of Bombay in 1883 as the first permanent special Inspector of Factories in India. Mr. Jones' memorandum was incorporated by the British Chief Inspector of Factories in his report for 1886-87 and it makes harrowing reading. Most factories worked from daybreak to sunset, did not work for more than four months had been expressly introduced with the object of exempting them all from the operation of the Act The work was carried ou mainly by for rest or meals. Both women and children women, and evidence given by all the witnesses were worked for excessively long hours. Venti-

[&]quot; "Indian Factory Legislation" by A. G. Clow, M.A., C.S.I., C.I.E, F.S.S., I.C.S.

lation in most factories was extremely bad and sanitation left much to be desired. Mr. Jones sanitation left much to be desired Mr Jones urged that pre-sure on the Government of India from the Home Government was necessary. In March 1889, the Government of India, after consulting local (covernments, torwarded to the Se retary of S'ate for India, definite proposals for the molification of the 1881 Act The main amendments suggested were (1) the reduction of the number of workers necessary to constitute a factory to 20, (2) the raising of the lower age of children to nine; and (3) the restriction in the hours of work for women to 11. At the suggestion of the Bengal Chamber of Commerce and the Indian Jute Manutacturers' Association, another Factories Commission was appointed in 1890 to enquire into factory conditions in Bengal, Bombay, the North West Provinces and Oudh On this occasion, female operatives were strongly opposed to any limita-tion of their hours of work if a similar limitation were not made for the hours of male operatives, and the Commission therefore recom-mended that the Government should have power to exempt any or all women from the clause limiting their hours to 11 daily.

THE FACTORIES ACT OF 1891.

It is not necessary for the purposes of this note to trace the various stages leading up to the passing of the 1891 Amending Act and it will be sufficient to state that, as finally pa-sed, if represented a big advance on the Act of ten years before The main teatures of the new Act were (1) the reduction in the number of persons neces ary to constitute a factory from 100 to 50 and the grant of the power to local Governments. to notify concerns employing 20 or more persons as factories, (2) a compulsory stoppage of work for half an hour between noon and 2 pm for all op ratives except those employed in factories working on the basis of approved shifts, provision for weekly holidays, (4) the fixation of the lower and upper limits of the age of "children" at aline and 14, the limitation of their daily hours of work to seven and to day light, and the prohibition of their employment in dangerous work, and (5) the limitation of the duly hours of work of women to 11, the restriction of their employment during 8 p m and 5 a m., and the provision that if women were worked for the full eleven hours permitted by the Act they should be given rest intervals amounting in the aggregate to at least an hour and a half per day. Government accepted the recommendation of the Commission of 1890 for the exemption of any or all women from the op ration of the regulation of their daily hours of work and a wide exempting clause was added in the 1891 Amending Act. The Act was regarded generally as the final word on the question of factories and His Excellency Lord Landsdowne speaking in the Legislative Council it the time said, "We believe that the effect of our measure will be to place factory labour in India on a proper footing and our Bill will be accepted here and at home not as a mere orelude to still further restrictions but a settlenent as final as any settlement of such a question an be.'

Apart from the mass meetings of workmen which were organised in the 'eighties by humanitarian social reformers for the purpose of memorialising Government for improvement of conditions of work in factories, Indian factory labour was almost up to the beginning of the twentieth century, a silent and unorgamsed factor in the luge industrial organisation that was rapidly coming into being in India unionism was non-existent and there was no channel through which the Indian workman could ventilate his grievances and ask for their redress The strike as a weapon of defence against oppressive conditions was almost unknown and such industrial disputes as dld occur soon terminated in favour of the employer owing to the untettered power which he enjoyed of replacing all men who downed tools with blackleg labour.

INTRODUCTION OF ELECTRICITY AND THE GREAT PLAGUE.

The last decade of the nineteenth century saw the advent of two new factors in the field of industrial labour in India which were destined, for the time being at any rate, to worsen conditions in Indian factories. The first was the introduction of electricity for purposes of factory lighting and the second was the widespread epidemic of plague. By 1900, the majority of the cotton textile mills in Bombay City and almost all the jute mills in Bengal were lit by electricity, and by the end of that year the ravages of the great epidemic of plague, which first broke out in Bombay City in 1896 and soon spread to other centres in India, resulted in the reduction of the labour force in most centres to a third to a half of its normal strength The immediate effect of these two events was a considerable increase in working hours Many of the larger textile mills resorted to day and night working and evidence is not wanting that some mills worked their operatives continuously for stretches of fifteen to twenty hours per day. In Bombay City there were actually auctions for labourers at street corners. The weaker of both the cotton and the jute mills, however, began to be alarmed at the competition from the mills which worked day and night and many of the millowners were not unwilling that Government should step in and prohibit night working altogether Factory industries were, however, saved from further restrictive measures owing to serious slumps which occurred in both the cotton and the jute trades at the beginning of the twentieth century. The problem of limiting hours of work of adult workers appeared to have solved itself and Government decided that no immediate action was necessary. The result was that an urgently needed reform was postponed by a decade.

The ravages can-ed by the plague were, however, not entirely devold of some good effects. The heavy mortality caused by it had thinned the ranks of agricultural workers, and the inequality between the demand for and the supply of labour naturally led to a considerable improvement in agricultural wages Both cultivators and agricultural labourers felt that remained in the towns therefore began to feel more independant than they did before, and the beginning of the twentieth century saw the first awakenings of a sense of class consciousness among industrial workmen. They were less ready to submit to the old conditions, and wherever employers tried to force those conditions upon their workmen they were met by opposition, Black-leg labour was not available to the same extent as before and a few stray strikes met with instantaneous success. These early successes led to disputes of a more widespread and concerted character- -disputes which resulted in a general all-round improve-ment in wages. Employers began to find that a spirit of bargaining was slowly but surely replacing the old tacit acceptance by the workers of such rates and conditions as they chose to offer during the earlier decades of the growth of Indian Industrialism

There was no further advance in factory legislation in India for twenty years after 1891. period 1891-1911 was one of changing conditions and of investigation. It was also marked by intense industrial activity in the country. There was a rapid expansion in road and railway construction with a collateral activity in building, engineering and mining—The number of factories 108e from 656 in 1892 to 2,403 in 1911 and the average daily number of persons employed in these factories increased from 316,816 to 791,944 over the same period. The cotton and the jute industries showed top figures in this expansion and the demand for labour began to get more and more acute as years rolled on A greater number of factories began to be lit by electricity and mglit working was quite a common feature in all branches of the textile in-dustry. Most of the cotton and the jute mills, however, did not work on the basis of shifts as they do to-day and the same batch of workpeople who entered a mill in the early hours of the morning were expected to continue working through the day and the evening into the late hours of the night Hours of work in cotton mills in Bombay averaged fourteen and a half and in the jute mills in Bengal fifteen per day, and when one thinks in terms of averages one must not torget that in averaging there must be several units in frequencies higher than the average "The result of the scarcity of labour was to increase the interest of the employers in making conditions more attractive The raising of wages was one step, the provision Inside the factory of houses was another less was done to make industrial labour attractive... It was an axiom with a number of employers that labour did not object to long hours in the factory, and that the actual hours of work were not considered excessive by those who worked." The Inspector of Factories in Bengal, however, considered that the large number of strikes which were occurring in that

there was little need to search for additional than to work hard for a short period "he remarkwork by migrating to the towns from where ed that "the latter system never appears to have reports were continually forthcoming of ex- been tried so that this opinion may be taken cessive homs of work in factories which were as mere supposition", and in his reports he lit by electricity. Such industrial workers as pointed out on more than one occasion that in workshops, where hours had always been shorter than in textle factories, there was not the same difficulty in obtaining the labour required in a few individual cases, the managements of some mills admitted that they had increased both their ontput and their profits substantially as a result of reductions in homs but it was to be at a much later date that these solitary mstances were to receive more general confirmation.

> As far as the hours of work of women factory workers were concerned, the 1891 Act had restricted them to eleven per day, but owing to a fairly general demand from women for hours coincident with those for men local Governments had granted several exemptions to individual factories and groups of factories permitting the employment of women during hours parallel with those for men The restrictive provisions of that Act as far as the employment of women was concerned were therefore partially meffec-tive. It was hoped, however, that the reduction which the Act had made in the homs of work of children to seven per day would result in a diminution in the demand for child labour-a hope that was not tultilled, both on account of the acute shortage of adult male labour and the higher wages that were demanded by able bodied men. The annual statistics of the average daily numbers of persons employed in factories show that whereas the numbers of men employed rose by a little over 147 per cent in 1911 as compared with 1892, similar increases in the numbers of women and children employed amounted to 164 and more than 175 per cent. respectively But over and above the employment of a comparatively larger proportion of children, there were flagrant evasions of the provisions of the Act both by the employment of under-aged children and by compelling them to work for considerably longer than the permissible hours. Both the 1881 and the 1891 Acts had provided for certification but this was not compulsory and the burden of proving that a child whose illegal employment was complained of was not under the prescribed age tested with the accused Convictions were difficult to obtain because both then as now there is much 100m for honest differences of opinion regarding the ages of Indian children. No certificates of fitness were necessary before children could be employed and employers were consequently left in a position to do much as they liked.

It is noteworthy that the lead in the matter of a statutory reduction in the hours of work of adult workers was given by the Bombay millowners.

The agitation against "Sweated labour" conditions started by two of the leading newspapers and periodicals in India was soon taken up by the operatives and at a large meeting of mill workers held in Bombay City on the province in the first decade of the present of mill workers held in Bombay City on the century were directly attributable to long hours. Criticising the belief that the Indian labourer twelve-hour day. Frightened at the prospect preferred to do a little work over a long period of being faced with a general strike in the cotton

mills in the city, the majority of the Bombay had not been accepted elsewhere, (2) that mills agreed to work a twelve-hour day up to direct limitation involved a restriction of the the 1st December and a thirteen-hour day thereafter The Government of India drew up a draft Bill and sent it to local Governments for opinion and this was soon followed by the appointment of a Committee (the Freer-Smith Committee) to make a preliminary survey of the hours and conditions of works of persons of all ages and sexes employed in factories. The Committee recommended the restriction of the hours of adult workers to twelve per day; and, following the Berne Convention of 1906, also recommended that night work for women should be prohibited.

APPOINTMENT OF FACTORY LABOUR COMMISSION OF 1907.

The findings of the Freer-Smith Committee made the appointment of a Commission mevitable and the Home Government in October 1907 announced the appointment of a Factory Labour Commission with seven members under the chairmanship of the Hon'ble Mi. (afterwards Sir)
W. T. Morrison, I. C.S. The terms of reference
were "to investigate, in respect of all factories in India, the questions referred to Sir Hamilton Freer-Smith's Committee, and the various suggestions and recommendations which that Committee has made" The Commission made a complete survey of factory conditions in India, and their report, which was published in 1908 gives a comprehensive account of conditions at the time and of the defects of the Custing legislation

The Commission endorsed the abuses and the evasions of the 1881 and 1891 Acts in connection with the employment of children. They found that in Calcutta, the headquarters of a factory inspector, from 30 to 40 per cent of the children employed half-time in jute factories were under the legal age of mine years and that 25 per cent of the young full-timers were under the legal age of tourteen years. In 17 out of 29 cotton nulls visited outside the Bombay Presidency, all the children under 14 years of age were ugularly worked the same hours as adults. In many factories the provisions of the Act with regard to the weekly holiday and the daily test interval were more or less ignored | Factory inspectors admitted that they knew of the chistence of these evils and also that they took no steps to stop them The Commission stated that inspections of large factories by District Magistrates or Civil Surgeons was a useless formality so far as the administration of the lactory law was concerned and they recommended that it should be abandoned.

As far as the findings of the Commission with legard to the question of the homs of work of whilt males is concerned, it must be admitted, that looked at from the point of view of opinions held on the subject to-day, they must appear to

working hours in all factories whereas such restriction was only necessary in textile tactories, (3) that it would not be possible to enforce such a restriction owing to the necessarily small cadre of the inspecting staff, (4) that most capitalists were opposed to it, and (5) that if the working hours of adult males were limited to 12 or 13 per day, attempts would be made in the future to restrict these hours still further. As far as women's homs were concerned, they actually proposed that the statutory maximum should be increased from 11 to 12 It is noteworthy that only one member (Dr. Nair) dissented from the Commission's findings in the matter of adult hours Di Nair recommended a limitation in the hours of adult male workers to twelve per day and a continuation of the 11-hom day for women with less power to local Governments to grant exemptions. The findings of the Commission were circulated to all provincial dovernments for opinions, and, in the light of criticisms received, the Government of India drew up a fiesh Bill "to consolidate and amend the law regulating labour in factorics" This Bill was introduced in the Governor-General's Legislative Conneil in July 1909 In drafting the Bill, the Government of India tollowed the proposals made by Dr Nan rather than by the majority of the Commission.

THE FACTORIES ACT OF 1911.

Want of space prevents us from recomiting the various stages through which the Bill had to go before it was finally passed on the 21st March 1911 It naturally evoked considerable opposition from all quarters but this was not so strong as that which met the proposals of Government in the eighties and the innetics. It is interesting, however, to observe that one association which submitted a last minute memorial to the Select Committee of the Legislative Council to whom the Bill had been referred, after alluding to "the protest which in point of unanimity and emphasis has seldom if ever been equalled in the case of Indian legislative pro-jects", prayed that "even at this eleventh hour it is earnestly hoped that the revolutionary, dangerous and unnecessary legislation contemplated should not be persisted in
